INTRODUCTION

ŀ

- User Services Requirements--Peripherals is a supplementary report produced by INPUT as part of the 1985 Customer Service Program for the United States. The report is provided to clients of the Large System and Small System User Requirements Module in order to provide these clients with a more comprehensive understanding of the user's total system service needs.
- Because the purpose of this report is to provide supplementary data to the User Services Requirements reports (for large and small systems), no analysis of the data is provided.
- The overall emphasis of this data report is to identify user requirements and current levels of satisfaction with selected disk drive and high speed printer manufacturers. Products and vendors surveyed are listed in Exhibit I-I. Users were encouraged to respond according to their needs rather than according to pre-established contractual agreements. INPUT believes that user responses unrestrained by current service contracts are much more representative of true market demands and therefore will be more valuable to service market planners.
- The reader will note that INPUT has organized the exhibits in a fashion that facilitates user satisfaction analysis within each vendors' samples. This presents the strengths and weaknesses of each vendor as reported by that vendor's users, while highlighting any improvements or degradations in service quality between 1983 (which was the last year INPUT analyzed peripheral user service requirements) and the current year.

EXHIBIT I-1

INTERVIEW SAMPLE BY PRODUCT AND VENDOR

PRINTERS				
VENDOR	MODEL NUMBER	NUMBER SURVEYED		
Centronics	6XXX, 6XX	12		
Decision Data	66XX	25		
IBM	3800	35		
Xerox	9700	43		
Total		115		

DISK DRIVES			
VENDOR	MODEL NUMBER	NUMBER SURVEYED	
CDC	333XXX	21	
IBM	33XX	33	
Memorex	36XX	9	
STC	86XX	8	
Total		71	

 User attitudes toward pricing and user receptivity to third-party maintenance will be further explored in future INPUT reports entitled <u>Customer Services</u> Pricing Analysis and User Receptivity to Third-Party Maintenance.

A. DEMOGRAPHICS

- As shown in Exhibit I-I, INPUT bases the following analysis on 186 telephone interviews of high-speed printer and disk drive users. The interview project was conducted between February and March of 1985, using the interview provided in Appendix A.
- As is INPUT's custom, a concerted effort was made to contact the person who
 had day-to-day contact with the product being surveyed, and who was responsible for, or at least familiar with, the handling of service pricing. As shown
 in Exhibit I-2, that person was most likely the data processing (DP) manager
 or operations manager.
- Exhibit I-3 also breaks down the 1985 peripheral user sample by the industry each respondent company serves. As can be expected, the majority of responses come from the manufacturing industries (both discrete and process), banking, and the services industries.
- As can be expected, the bulk of the respondents receive at least prime shift (8-5, Monday through Friday) coverage, although a large number of certain products, such as the IBM 3800 printer and the Control Data Corporation disk drives, received extended coverage. Exhibit I-4 provides a complete breakdown of the sample by contractual coverage.
- Exhibit I-5 provides a glimpse at the amount of experience that the peripheral
 user respondents have with third-party maintenance. As previously stated,
 INPUT will explore this issue in much greater detail later in the year.

 Exhibit I-6 presents demographic data concerning both the installed age of the respondents peripheral products and the length of service relationship between the peripheral user and their service vendors.

B. METHODOLOGY

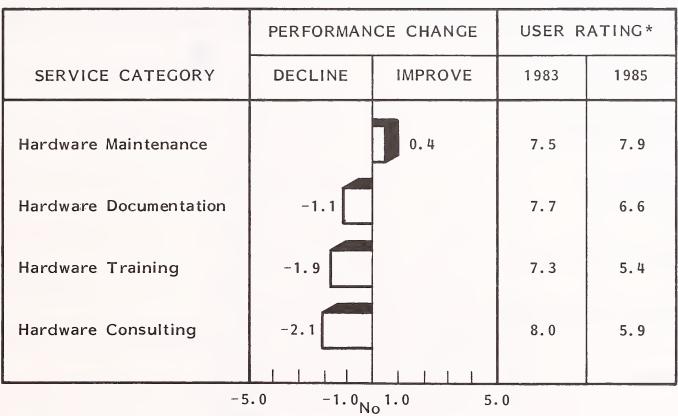

- The following exhibits were a result of the questionnaire included in the appendices of this report. The data was accumulated and stored into an IBM PC using dBASE III, a relational data base management system. The data was then analyzed using the statistical package known as ABSTAT.
- Appendix B provides a detailed description on the use of the data that produced the following exhibits, including instructions to clients who wish to make additional cuts of the data.

EXHIBIT 1-6

APPENDIX A

DEMOGRAPHICS

Peripheral Manufacturer		
Peripheral Model		
Peripheral Installed Age (Years)		
Current Maintenance Coverage on Peripheral (e.g. BBMC, T&M, 24 X7)		
Length of Service Relationship With Current Vendor (Years)		
Distance from Service Outlet to User's Site (Miles)		
INTENANCE		
On a scale of 1 to 10, where 1 = low and 10 = high, please rate your service vendor in the following categories:		
a. Overall satisfaction with Service		
b. Satisfaction with Hardware Service		
c. Price of Service		
If your company were to purchase a computer today, how important would each of these features be (1 to 10) in the purchase decision process:		
a. System Price		
b. System Capabilities		
c. Reliability		
d. Maintenance Response Time		
e. Maintenance Repair Time		
f. Price of Maintenance		
g. Vendor Reputation for Maintenance		

- 59 -

9. How many system interruptions do you have each month?		
	a. What percent of system interruptions are hardware related?%	
	b. Software related?%	
10.	How many hours a week is your system typically used?	
11.	What percent of your weekly schedule is the system available (on average, over the past 6 months)?	
12.	How many hours does it take your vendor to respond (on-site) once you have placed the first call?	
13.	How many hours does it take the vendor to repair the equipment once the FE is on site?	
14.	Again, on a scale of 1 to 10, how satisfied are you with:	
	a. System availability	
	b. Hardware response time	
	c. Hardware repair time	

- 15a. Please rate, on a scale of 1 to 10, your requirements for the following hardware goods and services:
 - b. Please rate your current level of satisfaction with the services you receive from your hardware maintenance vendor:

	Vendor Goods and Services	Requirement (1 to 10)	Current Level (1 to 10)
1.	Hardware capacity planning		
2.	Hardware consulting		
3.	Hardware documentation	-	
4.	Hardware training		
5.	Parts availability		
6.	Dispatching		
7.	Escalation		
8.	Hardware maintenance		
9.	FE skill level		

THIRD-PARTY MAINTENANCE						
16.	Do	you currently use third-party ma	aintenance on a	ny of your DP	equipment?	
17.	(If	no), have you considered using	TPM? Yes	☐ No		
18.	(If	yes on 16) for what product(s) a	re you using t	hird-party mair	ntenance?	
19.		a scale of 1 to 10, how satisfied now receiving? (if yes on 16)	are you with t	he TPM service	e you	
PRIC	ING					
20a.	. Do you have a requirement for any of the following services?					
b.	o. On a scale of 1 to 10, how important is your requirement for the service?					
c.	. What would you consider a reasonable premium for these services (over and above your BMMC)?					
		Service	a. Yes/No	b. 1 to 10	c. Percent	
	1.	Standby coverage		· · · · · · · · · · · · · · · · · · ·		- 0
	2.	On-site spare parts				0 0
	3.	Remote diagnostics _				00
	4.	PMs (preventive maintenance) _ during non-prime hours)				00
	5.	Full-time on-site engineer _				00

Thank You.

APPENDIX B: DATA BASE FORMAT

A. OVERVIEW OF THE DATA BASE

- As mentioned in the Introduction, INPUT conducted 186 interviews of printer and disk drive users as the basis of this report. Each interview was conducted over the telephone and recorded on questionnaire forms like the one in Appendix A. Overall, each questionnaire contains 64 data items along with 16 fields of demographic data.
- After the questionnaires were completed and verified, the user responses were entered an IBM personal computer using dBASE III, a relational data base management system produced by Ashton Tate (Culver City, CA). The resulting data base has 116 fields corresponding to individual question on the questionnaire in Appendix B.
- The principal advantage of dBASE III over dBASE II, the data base package previously used by INPUT, is that all data can be included into one file as opposed to five files used with dBASE II. INPUT's 1985 peripheral user requirement data is stored in a file titled "FUA6.DBF." The structure of the data base is included in Exhibit B-I.

B. ANALYSIS OF THE DATA BASE FILES

- INPUT utilizes ABSTAT, a statistical analysis packed designed to "read" dBASE III files, to analyze the data in the large system user requirements file, FUAI.DBF. ABSTAT is produced by Anderson-Bell (Carson City, CO).
- Time and space constraints prevented INPUT from accessing any but the most obvious statistical conclusions resulting from the data in the file FUA6.DBF.

 Some of the statistical analysis "cuts" that looked promising include:
 - Analysis of service performance by region.
 - Effect of installed age of CPU on system availability and service performance.
 - Detailed analysis of service performance by individual and competing products.
- Clients that wish to have access to the raw data resulting from the 186 questionnaire survey of peripheral users should request the diskette in writing to INPUT's main office in Mountain View (CA). Unless told otherwise, INPUT will assume a standard format of:
 - IBM-PC.
 - PC-DOS 2.01.
 - 380K.
 - dBASE III compatible file structure.

- INPUT can make the data available in nonstandard formats. Please call or write for a full listing of formats.
- Clients that do not wish to analyze the data themselves can utilize INPUT's
 Client Inquiry Service (Hotline) to access the data. The Hotline staff work
 with the program consultants to provide additional information about this (and
 all others) INPUT reports.

APPENDIX C: DEFINITIONS

- <u>APPLICATION SOFTWARE</u> Software that performs procession service and user function.
- CONSULTING Includes analysis of user requirements and the development of a specific action plan to meet user service and support needs.
- <u>DISPATCHING</u> The process of allocating service resources to solve a support related problem.
- <u>DOCUMENTATION</u> All manuals, newsletters, and text designed to serve as reference material for the ongoing operation or repair of hardware or software.
- <u>END USER</u> May buy a system from the hardware supplier(s) and do his own programming, interfacing and installation. Alternatively, he may buy a turnkey system from a systems house or hardware integrator.
- ENGINEERING CHANGE NOTICE (ECN) Product changes to improve the product after it has been released to production.
- ENGINEERING CHANGE ORDER (ECO) The follow-up to ECNs which
 include parts and a bill of material to effect the change in hardware.

- <u>ESCALATION</u> The process of increasing the level of support when and if the field engineer cannot correct a hardware or software problem within a prescribed amount of time, usually two to four hours for hardware.
- <u>FIELD ENGINEER (FE)</u> For the purpose of this study, field engineer, customer engineer, serviceperson and maintenance person were used interchangeably and refer to the individual who responds to a user's service call to repair a device or system.
- HARDWARE INTEGRATOR Develops system interface electronics and controllers for the CPU, sensors, peripherals and all other ancillary hardware components. He may also develop control system software in addition to installing the entire system at the end user site.
- LARGE SYSTEM Refers to traditional mainframe including at the low end IBM 4300-like machines and at the high end IBM 308X-like machines. Large systems have a maximum word length of 32 bits and a standard configuration price of \$350,000 and higher.
- MEAN TIME BETWEEN FAILURES (MTBF) The elapsed time between hardware failures on a device or a system.
- MEAN TIME TO REPAIR The elapsed time from the arrival of the field engineer on the user's site until the device is repaired and returned to the user for his utilization.
- MEAN TIME TO RESPOND The elapsed time between the user placement of a service call and the arrival at the user's location of a field engineer.
- MINICOMPUTER See Small System.
- OPERATING SYSTEM SOFTWARE (SYSTEMS SOFTWARE) Software that
 enables the computer systems to perform basic function including system
 control, utilities, and application development.

- <u>PERIPHERALS</u> Include all input, output, and storage devices, other than main memory, which are locally connected to the main processor and are not generally included in other categories, such as terminals.
- <u>PLANNING</u> Includes the development of procedures, ditribution, organization, and configuration of support services. For example, capacity planning "installation" planning.
- PLUG-COMPATIBLE MAINFRAME (PCM) Mainframe computers that are compatible with and can execute programs on equivalent IBM mainframe. The two major PCM vendors at this time are Amdahl and National Advanced Systems.
- SMALL BUSINESS COMPUTER For the purpose of this study, is a system which is built around a Central Processing Unit (CPU), has the ability to utilize at least 20M bytes of disk capacity, provides multiple CRT workstations and offers business-oriented system software support.
- <u>SOFTWARE ENGINEER (SE)</u> The individual that responds (either on-site or via remote support) to a users service call to repair or patch operating system and/or applications software.
- <u>SMALL SYSTEM</u> Refers to traditional minicomputer and superminicomputer systems ranging from small mutliuser, 16-bit system at the low end to sophisticated 32-bit machines at the high end.
- SOFTWARE PRODUCTS Systems and applications packages, which are sold to computer users by equipment manufacturers, independent vendors and others. Also included are fees for work performed by the vendor to implement a package at the user's site.
- SUPERMINICOMPUTER See Small System.

- <u>SYSTEMS HOUSE</u> Integrates hardware and software into a total turnkey system to satisfy the data processing requirements of the end user. He may also develop system software products for license to end users.
- <u>SYSTEM INTERRUPTION</u> Any system downtime requiring an Initial Program Load (IPL).
- <u>TRAINING</u> All audio, visual, and computer based documentation, materials, and live instruction designed to educate users and support personnel in the ongoing operation or repair of hardware and software.
- <u>TURNKEY SYSTEM</u> Composed of hardware and software integrated into a total system designed to completely fulfill the processing requirements of a single application.

About INPUT

INPUT provides planning information, analysis, and recommendations to managers and executives in the information processing industries. Through market research, technology forecasting, and competitive analysis, INPUT supports client management in making informed decisions. Continuing services are provided to users and vendors of computers, communications, and office products and services.

The company carries out continuous and in-depth research. Working closely with clients on important issues, INPUT's staff members analyze and interpret the research data, then develop recommendations and innovative ideas to meet clients' needs.

Clients receive reports, presentations, access to data on which analyses are based, and continuous consulting.

Many of INPUT's professional staff members have nearly 20 years' experience in their areas of specialization. Most have held senior management positions in operations, marketing, or planning. This expertise enables INPUT to supply practical solutions to complex business problems.

Formed in 1974, INPUT has become a leading international planning services firm. Clients include over 100 of the world's largest and most technically advanced companies.
