

INPUT EDI Reporter INTERNATIONAL

Your EDI Resource

The monthly publication that focuses exclusively on your EDI needs

In Every Issue:

- ➡ Concise writing that puts your finger on the changing pulse of the EDI industry
- ➡ Timely and topical EDI reporting from around the world
- ➡ Interviews with EDI innovators, trend setters, and industry movers
- ➡ In-depth EDI industry marketing trends and valuable marketing predictions
- ➡ Fast-breaking news and analysis; regional perspectives; calendar of events; major conference highlights and reports; editorials; new products, developments, and trends; technology tutorials

Reporter Readers Never Miss EDI Opportunities and Developments

When British Telecom purchased McDonnell Douglas' Information Systems, INPUT's *EDI Reporter* got the word out fast to its subscribers. The event was so important that the Reporter staff rushed a special ALERT Instant Analysis fact sheet to the subscriber base. This fact sheet was immediately followed by an in-depth

analysis of the merger's importance and its impact on the EDI community. The Reporter's coverage went even further. INPUT published a feature article that went into the specifics of the transaction, including a comprehensive look at the various components of the divestiture, such as Telecheck, Payment Systems, and Applied

Communications. The article also analyzed the sale's effect on McDonnell Douglas' corporate structure and the global EDI industry.

Timely analysis like this is just one reason why many Fortune 500 executives subscribe to the *EDI Reporter*.

The *EDI Reporter's* Washington Watch Keeps You One Step Ahead

Small-business people take heed. The U. S. government is on the verge of helping you take advantage of electronic data interchange. Congress will meet early next year to determine whether and how federal aid could be used to help small businesses adopt EDI. INPUT's

Washington Watch staffers recently published this exciting news and a follow-up report is on its way.

The federal government exerts enormous influence over all industries. INPUT staff reporters are on the alert for items that

specifically affect the EDI community.

To give our readers the chance to contribute to the decision making process, INPUT reports government trends before they come up for a vote.

The *EDI Reporter* Delivers More Content and Analysis Than Any Competing EDI Publication.

Straight-talking technical tutorials give you the information you need to make informed and timely decisions. Just look at these excerpts from a recent article that compares the ANSI and EDIFACT languages:

"ANSI allows more types of characters than EDIFACT. Of particular note is the absence of international currency signs in EDIFACT, including the dollar ("\$\$") sign, which ANSI allows."

"ANSI X12 has built upon previously existing standards (e.g., TDCC) and has a range of readily available transaction sets. Its procedures have been fine-

tuned to be considerate of, and to take into account, industry needs. EDIFACT development and maintenance procedures differ from those used by ANSI, and this is causing confusion among users."

"EDIFACT is viewed as advantageous to companies involved in international business; the proof is the adoption and participation

in pilot testing by Dutch-based Phillips, UK-based Imperial Chemical Industries, and multinational Texas Instruments."

In this article, the *EDI Reporter* demystified the controversy over ANSI vs. EDIFACT by publishing a tutorial that both vendors and users can understand and put to immediate use.

EDI Editor Brings You a Global Perspective

Torrey Byles' strong background in technical and business journalism complements his role as editor of the *EDI Reporter*. He provides comprehensive EDI coverage from a global perspective. "EDI vendors and users need to know more than how their competitors are doing. They also need to know how technical and economic developments in both the U.S. and abroad impact their business."

Torrey Byles specialized in EDI coverage for the *Journal of Commerce*. His byline has appeared in information industry publications, such as *Computerworld*, *MIS Week*, *Datamation*, *Electronic*

Business, and others. In addition to EDI, he has covered office and industrial automation, advanced data

Torrey Byles, Editor

base technologies, CAD/CAM, natural language processing, telecommunications, and technological development in newly industrializing countries. He was also a staff writer for the Computer Society of the Institute of Electrical and Electronics Engineers (IEEE), a major standards-setting body and worldwide professional organization.

Torrey began his business writing career in Taiwan and speaks fluent Mandarin Chinese. His international background gives him a special edge in reporting on EDI developments in the Pacific Rim countries.

Information Services Expertise from INPUT

INPUT was founded in 1974 by President Peter Cunningham as an independent, Silicon Valley-based international market research and consulting firm that specializes in the information systems and services industries. INPUT is a key source of information and support for more than 200 companies in North America, Europe, and Asia, including some of the world's most advanced systems and services companies. INPUT clients range from small organizations that use information services to Fortune 500 companies.

Recent INPUT market research reports customized specifically for EDI vendors and users include *EDI Inter-trends*, which examines integration, internationalization, internetworking, and standards interfusion trends; *Advanced EDI Services*, which recommends winning business strategies for EDI vendors; and *EDI Reference Guide*, an invaluable guide to ANSI/EDIFACT for vendors and users.

Clients benefit from comprehensive support and advisory services, including immediate access to industry

experts, "Hotline" Inquiry Services, on-site visits, custom research and consulting, acquisition services, and deliverables such as reports, newsletters, and conferences. INPUT clients can also take advantage of a broad range of advisory services programs, such as Market Analysis, Vendor Analysis, Systems Integration, Customer Service, Electronic Data Interchange, the Multi-national Network Program, the Federal Information Systems and Services Programs, and the Information Systems Program for IS planning.

Subscribe Now and Take Advantage of This Special Savings Offer:

Subscribe to INPUT's *EDI Reporter* before January 31, 1990 and INPUT's new comprehensive study, the *EDI Standards Reference Guide*, valued at \$500.00, can be yours for just \$250.00—a savings of \$250.00!

The *EDI Standards Reference Guide* gives you an in-depth look at the demand for and benefits of EDI, demystifies the presently confusing standards picture, shows you how EDI is moving toward standards development, and puts you in touch with business opportunities emerging from the need for standards.

The Most Comprehensive and Detailed EDI Standards Analysis Available Anywhere Today

INPUT surveys show that standards are consistently EDI users' biggest concern. This study covers a full range of EDI standards, including EDI/EFT, graphics interchange, and international formats, plus an examination of the United Nations-chartered UN/EDIFACT international EDI standards.

The report also provides the addresses of all associations and standards-making bodies so you can get additional information directly from the source.

The *EDI Standards Reference Guide* provides you with a comprehensive analysis of standards-related business opportunities, such as downloading standards tables and configuration/setup tables, which can become new services for third-party network service providers.

This Report Is the EDI Professional's Most Valuable Asset

This report walks you through the standards maze with informative examinations of *public EDI standards*, such as the American National Standards Institute's (ANSI) X12 format, which describes electronic equivalents of business documents; *industry-specific standards*, such as the grocery industry's Uniform Communications Standard (UCS); and many *company proprietary standards* for EDI applications.
