NOTES:

JJ88-DT4-26A,B

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud. The text notes that records should be kept for a minimum of seven years and should be accessible to authorized personnel at all times.

2. The second part of the document outlines the specific procedures for recording transactions. It states that all transactions must be recorded in a timely and accurate manner, and that the recording process should be subject to regular audits. The text also mentions that the recording process should be designed to minimize the risk of error and to ensure that all transactions are properly documented.

INPUT

NOTES:

JJ88-DT4-30

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that proper record-keeping is essential for the integrity of the financial system and for the ability to detect and prevent fraud.

2. The second part of the document outlines the specific requirements for record-keeping, including the need to maintain original documents and to keep copies of all records for a minimum of seven years. It also discusses the importance of ensuring that records are accessible and retrievable at all times.

3. The third part of the document discusses the role of the auditor in verifying the accuracy of the records. It emphasizes that the auditor must exercise due diligence and must be satisfied that the records are complete and accurate before issuing an audit opinion.

4. The fourth part of the document discusses the consequences of non-compliance with the record-keeping requirements. It states that failure to maintain accurate records can result in the disqualification of the auditor and may also lead to the imposition of penalties.

5. The fifth part of the document discusses the importance of ongoing monitoring and review of the record-keeping process. It emphasizes that the record-keeping process should be subject to regular review and that any deficiencies should be promptly identified and corrected.

s are reviewed more

However, connectivity
between A — convergence towards complete CASE systems
that offer full life cycle support and flexibility for future development.

In terms of ADTs, complete CASE systems provide a total development environment of RDBMS, a central data dictionary or repository, 4GLs and two-dimensional graphical programming languages. Complete CASE systems allow the software engineers to build a graphical image of the derived application on his/her workstation and then automatically generate the code to produce it.

The characteristics of complete CASE systems are illustrated in a schematic given as Exhibit III-3.

EXHIBIT III-3

DT4-18 CASE Tools Advantages

- Assist in Development of Code
- Assist in Development of Test Cases
- Assist in Debugging
- Assist in System Release
