Appenix - INPUT Proposal

Report to NTT Data on the Identification of Internet Commerce Products and Services

Introduction

This report consists of the following sections:

- This Introduction discusses our methodology and findings and offers some observations on the findings.
- Table 1: I-Commerce Products' and Services summarizes the findings in table form.
 The table is currently sorted by Category and secondarily by Vendor, but this is a
 Word (for Office '97) table and it can be sorted and presented by any column. Also,
 the Web site URLs are hot—the user can click on the URL and connect to the site.
- Individual I-Commerce Vendors and Their Products. This section, an expanded version of the summary table, lists vendors alphabetically and offers a more detailed overview and description of the products.
- Table 2: I-Commerce Web Research Resources. This brief table summarizes the best sources on the web we could identify for research into I-Commerce. It also contains connectable URL listings.
- Web-site print-outs, which can provide additional information and show how the vendor is presenting the products.

Summary of Scope and Objective

The objective was to provide information on at least 50 products and services offered for Internet Commerce, concentrating primarily on US products and services. We proposed to identify the phases of the commerce cycle at which the products were targeted, and for each product we would also provide a brief description, the vendor name and contact information, and a web-site if available.

Methodology

The search was conducted nearly entirely on the web, through the use of search engines such as HotBot and Yahoo and through identification of key web sites—I-Commerce associations and electronic magazines, for example—that contain links to I-Commerce vendors and products. Two sites that were especially useful were All E-Commerce and Net Commerce. These and other sites are summarized in Table 2.

To establish product categories, we re-analyzed the commerce cycle phases for the Business Customer as well as the Business Vendor. The graphic at the top of the next page summarizes our analysis of these parallel cycles. We used the phases shown in the

 $^{^{\}circ}$ In this report, we use I-Commerce interchangeably with the more widely used term, E-Commerce.

graphic as Product Categories in identifying which phases the product targeted. Needless to say, many products target more than one phase.

 $Figure \ 1. \ The \ product \ categories \ represent \ targeted \ phases \ of \ the \ commerce \ flow.$

Summary of Findings

As summarized in *Table 1*, Fifty-eight vendors marketing well over 100 I-Commerce products were identified.

The Distribution of Products into Categories

As the search progressed, we found a heavy preponderance of "Web Store Front" or "Internet Catalog" products geared to setting up a retail sales presence. We might have identified 50 of this category alone, ranging from "Rent-a-Store-Front-From-Us" instant,

cheap solutions to full major packages of large hardware servers plus software infrastructure to help medium to large retailers enter into I-Commerce.

We chose to modify the search to attempt to include a wider variety of categories and avoid listing only Sales and Infrastructure products to the exclusion of others. We found products in all categories. Nevertheless, on the Vendor side certain categories are heavily represented: sales, logistics, billing, and infrastructure. The Support category is sparse, and we also found few products that targeted Marketing, which is still largely dominated by consulting services, not software products.

On the Customer side we found a few products for searching (shopping) and procurement generally. We could not find a Receiving product as a primary category, though some Procurement products may also cover receiving.

The "heavy-hitters"—the largest organizations focusing on I-Commerce, such as IBM, Microsoft, Sun, Hewlett-Packard, and others—seem to focus on primarily on Infrastructure, on hardware and software servers, databases, transaction processing, security and other basic structures. The secondary focus of these giants is on (a) web store-front commerce (Sales) and (b) intranet business-to-business structures and solutions (Logistics) generally.

Many smaller players are focusing on particular niches, including variations on store fronts, industry-specific solutions, industry specific databases, etc.

About the Product Grouping and Descriptions

Generally, in the summary table (Table 1), a vendor's products are grouped together unless the products is distinct or unique (that is, distinctly different from other products by the same vendor or distinctive in a representing a category or niche).

In the Individual I-Commerce Vendors and Their Products section, we offer a "Vendor Description" of the products. Unless otherwise noted, this description is an edited version of the vendor's presentation on the web site. The exceptions include recent press reports giving recent news of on significant products. The "Vendor Description" varies somewhat, depending on the nature of the vendor:

- When the Vendor represented a single product or simple set of related products, we
 provide a description of those products. (E.g., CyberCash, Mini-Vend, Cart32)
- When the Vendor is a larger concern primarily involved in an large array of I-Commerce products or services, we attempted to offer an overview of the range and scope of the products involved. (E.g., Sterling Commerce, Harbinger.)
- Where the Vendor is a giant with far too many products to attempt to summarize, we attempt to focus on an overview of the company's products or range of products most closely targeting the I-Commerce client. (E.g., IBM, Hewlett-Packard, Sun, Digital.)

Comments about the Findings

This research tends to confirm what one might assume about a young industry: (1) that many resources are going into building and improving the infrastructure, and that

YNICP -3-

specific products are in a *generalist* stage, at least for niches other than financial commerce. The few identified niche products tend to be large-industry based, focusing on, for example, vehicle parts, shipping and freighting, or utility companies.

We found no small-business, niche-oriented products: no "Create Your Own on-line Delivery Restaurant," for example, or "Create Your Own On-Line Hardware Store," or "Put Your Local Courier/Delivery Service On-Line". Of course, our research was limited in time and scope, but at least it may be said that if these types of products are out there, they are not easy to find.

YNICP -4

Vendor's Description

Able Commerce Builder

The flexible and economical online merchandising system that allows merchants to quickly generate single or multiple stores that integrate product databases with the Web and accept secure sales transactions over the Internet.

- Retail Shopping Order a single item or many at a time, simple turn-page navigation, user tracking, and international support.
- Checkout Editable and Intuitive shopping basket functions include built-in checksum for credit cards and supports secure real-time payments. Six Payment Options are already included: Visa, American Express, MasterCard, Discover, fax-in, call back and the merchant may also add other options.
- Online Administration Add your product inventory with 3 possible levels of hierarchy, easily make global site changes, customize page settings, create multiple auxiliary pages, duplicate databases, customize shipping and taxes, and check your new orders here.
- Replybuilder Create custom forms on-the-fly, guest books, and auto-email responders for your customers. No database changes needed to design large complex custom forms with Replybuilder.
- Multiple Domain Full support of multiple domains using a common domain for a secure checkout, or each domain can use their own secure certificate.
- Discounts Allows merchant to give discounts or specials on an item or groups of items with a variety of methods.
- Store Features Power Search, What's New, Directory, and Mall page wizards available.
 All pages are dynamically generated and updated.

- Reports Keep track of who, what, where and when customers are buying. Gives the
 merchant the option to view log files of customer information such as, IP, items bought,
 pages viewed, and more.
- Security Secure and unique logins for administrators of the system with two levels of security rights. Assign multiple users to a storefront group.
- Wizards Select from many different wizards and options to customize the page formatting with individual or global effects. Use custom or shared wizards for storefront design, power search, what's new, directory, and others.
- SQL Support Upsize the provided Microsoft Access 7.0 databases to SQL for fastest performance.

Sales, Billing

Contact

http://www.merchantmanager.com/x-overview.html

Vendor's Description

- Merchant Manager is a total online business management and payment capture system developed by Accesspoint Corporation. Merchant Manager's advanced methods of implementing electronic commerce on the Internet combine the strengths of many different software solutions into one powerful, integrated online environment...
- Merchant Manager's main interface provides easy access to all of the system's online tools. Once
 you log on to your account, you can use your keyboard to fill-in data fields, select style sheets,
 create web pages, change prices, manually enter credit card sales, control inventory, keep track of
 shipping costs, monitor your site's traffic, track sales and handle many other functions. Total
 business management with absolutely no programming or HTML knowledge needed.
- Your customers see your web pages and products displayed automatically 24 hours per day—with all of the color, pictures, pricing and descriptions necessary to motivate online shopping....Unlike hard-coded websites, your products and pricing are presented dynamically and are secure from price tampering and would be hackers.
- Merchant Manager collects all of your customer's order information inside a secure transaction template on a secure server. Credit card transactions can be handled in real-time or forwarded to you for manual entry. Future releases of Merchant Manager will also support on-line checks and ATM withdrawals.
- For realtime transactions, Merchant Manager automatically submits your customer's information
 to your card processor for authorization....
- If the credit card is denied by the card processor, the customer receives a notice onscreen that the credit card was not accepted.
- Merchant Manager also handles account and purchase order sales...
- Complete transaction reports including credit card numbers and expiration dates are provided in a password protected secure directory...
- Merchant Manager performs an automatic settlement each evening whereby all the transactions for the day are tallied and funds are transferred by the processor into the your checking account within 48 to 72 hours, depending on banking and card service terms...

http://www.arinet.com ARI NETWORK SERVICES, INC. 330 E. Kilbourn Ave. Milwaukee, WI 53202

Vendor's Description

Based in Milwaukee, Wisconsin, ARI provides electronic commerce services to targeted industry sectors and distribution channels. Unlike other electronic commerce firms which focus on basic software tools or provide value-added network operations, ARI offers data management services and EDI-enabled tool kits to address the application level of electronic commerce solutions. The company addresses a number of EC applications in the agricultural chemical, specialty chemical, freight transportation and publishing industries, including:

- Sales and inventory reporting among distributors and manufacturers, with an EC
 application which enables distributors to satisfy the requirements of each manufacturer,
 and which is expandable to address additional applications.
- Location directories, providing ID codes for locations referred to in electronic commerce transactions (e.g., ship from, ship to, bill to)
- Fully integrated sales force automation tool kits, linked to popular office software (e.g., Microsoft Office, Lotus 1-2-3), E-mail systems, and providing customized data and ability to integrate company-specific applications.
- Dealer network services, which links dealers with their manufacturers and distributors for inventory inquiries, orders and responses, product registrations, warranty claims, and product/price database updates.
- A database of Associated Press news stories, searchable via the World Wide Web by publishers of non-daily newspapers for republication, and including an overnight delivery service of related AP wire photos.

The above applications embrace emerging communications, database and protocol standards, and can operate on ARI's secure proprietary network, private internets and the public Internet.

BroadCast Software Corp 20310 Empire Avenue #A102 Bend, OR 97701, USA 541-317-0429 voice 541-317-0430 fax

Vendor's Description

BroadCast is a suite of programs working together to provide a complete system for locking software and unlocking it remotely on demand.

BroadCast Locker

Publishers use this program to compress and lock their software (programs or content data) into a single file called an "Unlocker Application".

BroadCast Unlocker

This Unlocker Application is uploaded to the Internet, Online Services, or placed on a CD-ROM. When a customer is ready, they can quickly purchase and use the live version of the software. The customer downloads and runs the Unlocker Application, which displays instructions, a unique control number, and the Publisher's own telephone number, fax number, and e-mail address.

BroadCast KeyMaker

Once payment and relevant information have been collected, the publisher runs the BroadCast KeyMaker program which generates a unique password for that customer. The customer enters the password into their Unlocker Application, and the product is instantly unlocked and ready for use.

BroadCast KeyMaker Plus · NEW!

KeyMaker Plus is a server that can automatically process email orders—24 hours a day, 7 days a week. It does everything that KeyMaker does—plus retrieves emails, processes credit cards,

YNICP -9 - Proprietary -- INPUT

deposits money, emails replies to customers, and maintains a detailed database of each and every transaction.

BroadCast PatchWorks Pro (optional)

PatchWorks Pro creates small, stand-alone Updater Applications which are used to field-upgrade your products to newer versions. Updaters can be freely and safely distributed online, since they are only of use to end-users who already own a copy of your software. PatchWorks Pro's many powerful features include "diffing"; a process that greatly reduces the size of an Updater by capturing only the portions of your product that changed since previous release(s). You can dramatically reduce your tech support costs by uploading Updater applications to online services.

http://www.subscription.com/telesub/html/telesub.html busini@ibm.net Tel: (613) 230-1977 Fax: (613) 230-7043

Vendor's Description

Subscription.com is a complete subscription management service. Subscription.com provides a variety of benefits that include the ability to subscribe to services online, to change one's address, to modify delivery location, ease of use etc.

The imperative for survival in today's business environment is to focus on core competency, focus on customer service, decrease time to market and leverage information technology. Subscription.com's customers may view their business as publishing, cable, entertainment. They do not view themselves as being in the business of developing subscription systems....

Business Benefits

- Global Reach, Global Exposure: The Internet provides a high-traffic virtual area of about 30 million users in which businesses can promote their products and services, cultivate customer loyalty, interact with their customers, improve customer service, increase subscriptions revenue in a cost-effective way.
- Increase in Revenue: According to numerous market research, the Internet users is highly
 educated and earns above average salary. This is indeed the market for the majority of
 subscription providers such as magazines, newsletters etc.
- Improved Customer Service: Through the ability to interact with the consumer, business
 can provide up-to-the-minute information to their customer. They can inform them of
 price changes, obtain their comments, feedback etc.
- Customer Loyalty: Subscription.com allows businesses to tighten the bond between itself
 and the customer through improved and sustained two-way communication.

Control Data Systems Inc, St. Paul, Minnesota http://www.cdc.com info@cdc.com 1-888-RIALTO4

Vendor's Description

Rialto is Control Data's electronic marketplace - a series of solutions for business and government institutions who want to inject global intelligence into their intranets and transform these technology-driven resources into business-driven infrastructures. The objective is to provide three key benefits:

- Enable desktop users to more easily locate information within their enterprise.
- · Enable institutions to secure their infrastructures and protect their resources.
- · Enable institutions to cost effectively manage their infrastructure.

At the heart of Rialto, Control Data designs and builds infrastructure solutions that reflect the following forms of enterprise intelligence:

- Consulting
- Enterprise Messaging
- Global Directories
- Information Sharing
- Managed Services
- Security Services

Control Data builds Rialto infrastructures as foundations that institutions can leverage to implement both enterprise and intercompany business solutions. In essence, Rialto infrastructures enable companies to pursue aggressive business strategies that require the implementation of sophisticated IT capabilities, including the use of electronic commerce, enterprise collaboration, and enterprise decision support.

Vendor's Description

Our business is to enable consumers, merchants and financial institutions to transact business over the Internet. While the consumer Wallet and the merchant Cash Register are distributed via the Web and strategic partners, the CyberCash gateway is distributed by CyberCash only to international financial partners.

Since each country has its own language, currency and banking system, CyberCash products must be localized to handle these characteristics of each country. More importantly, the gateway must be compatible with the processing system of the local financial institution.

At first, CyberCash Internet payment services will work only within each individual country. Then the capability of the services will progress to enable merchants and consumers to make online transactions internationally.

CYBERCASH SET COMPLETE PAYMENT SOLUTION

CyberCash enables merchants, banks, processors, and consumers to use SET (Secure Electronic Transaction) as a global payment protocol while building on the security and convenience long associated with the CyberCash payment solutions.

CyberCash has adopted the new SET protocol and is incorporating it into CyberCash's suite of Internet payment solutions. The transition to SET will provide secure, open standard-based solutions for the many merchants, banks, processors and consumers including those using CyberCash's existing services.

The SET protocol is a collection of encryption and security specifications used as an industrywide, open standard for ensuring secure payment transactions over the Internet.

Developed by VISA, MasterCard and key technology Leaders, the primary goals of SET are to protect the credit card system, establish consumer confidence in the Internet as a marketplace, and build transactions volume over this new commerce channel.

http://www.eds.com Corporate Address 5400 Legacy Drive Plano, Texas 75024-3199 Tel: (+1)-972-604-6000 e-mail: info@eds.com

Vendor's Description

FOR IMMEDIATE RELEASE: Monday, March 2, 1998

BA [Bank of America] Merchant Services, Inc. and EDS Team up to Enable Convenient, Nationwide Telephone-Based Credit Card Payment of Taxes

SAN FRANCISCO, Calif., and PLANO, Texas — A new nationwide electronic payment service is about to make paying state and local taxes and other government fees a lot easier and more convenient — by giving you the option to pay using a touch-tone telephone and charging it to your credit card, 24 hours a day, no matter where you are.

The new service, developed by BA Merchant Services, Inc. (BAMS) and technology services company EDS, is the first electronic government fee payment program offered to government agencies nationwide.

The service offers benefits to both taxpayers and government entities. It gives taxpayers the convenience of paying by credit card and avoid the hassles of standing at the counter to pay or mailing in a check. For participating agencies, it offers a widely accepted payment mechanism without increasing their operating costs. "Payment of state and local government fees through an automated telephone/credit card system represents another step forward in the movement toward electronic bill presentment and payment," said Albert Nekimken, electronic banking analyst for Input Research.

"Consumers will love the convenience of electronic payments for everything, including their local government obligations. At that point, there will be no turning back to licking stamps."

Here's how the service works. A notice in your statement or bill includes the 1-888-ALL-TAXX telephone number for payment via credit card. Your call is answered by an interactive voice-response unit, or VRU. By following prerecorded voice prompts, you use any touch-tone telephone to enter the government entity's tax bill number, the payment amount and your credit card account number. In a matter of seconds, you receive an authorization number that

payment is accepted. A convenience fee, based on a percentage of the total payment, is charged to your credit card account.

BAMS has primary responsibility for marketing the service to state and local governments and processing credit card transactions. EDS powers the behind-the-scenes technology engine and brings its world-class systems infrastructure to serve as the technical backbone of the service. PhoneCharge, Inc., a sales and marketing firm, also participates in direct sales to government entities and provides consulting and marketing communications services to promote the service to taxpayers.

The new service has gotten the attention of several state and local agencies. "Consumers like payment options, and we think our constituents would appreciate the option and the convenience that paying by credit card via the telephone provides" said Shawnee (Kan.) County treasurer Rita Cline, who recently signed up for the service. "And because it's a service, somebody else pays for the equipment, so we don't have to invest in the technology or have to maintain it."

For more information, government agencies can call BAMS at 602-594-2141 or PhoneCharge, Inc. at 516-671-2121 ext. 11.

BA Merchant Services, Inc. is one of the largest payment processors in the United States. The company processes over 500 million credit card and debit card transactions for over 150,000 retail locations with more than \$30 billion in credit card sales and over \$3 billion in debit card sales each year.

VIRTUAL SHOPS at Clickstore

Categories

Sales, Billing, Logistics, Marketing, Infrastructure

Contact

http://www.clickstore.com/services.html http://www.clickstore.com/download.html

info@clickstore.com

Vendor's Description

....Let us explain why you are going to become our customer...

EASE OF USE have you ever seen a web store so easy to navigate for buyers and so easy to manage for vendors?

POWER Clickstore allows you to put hundreds of products on line, each one with its photo, description, features, a different price for different sales targets, such wholesale, retail, etc. (yes, you can password protect the price lists for your dealers), a currency for every price and much more. Moreover, since you may want to sell both in your country and in the rest of the world (that's why the Internet is greatl) Clickstore allows you to publish your catalog in two different languages, maybe your mother tongue and English of course.

FLEXABILITY You can change the setting of your Virtual Shop whenever you need, how many times you need. For example you can enable or disable the payment methods you prefer: cash on delivery, prepaid check, transfer order, or credit card (via Internet and/or via fax).

PRICE Thanks to the new approach we practice, you can update your catalog when you want, the way you want and every update is totally free!!! Vendors are only charged on a per-time and per-catalog-size basis. And more, since we don't need dozens operators to update your Virtual Shop, we can keep the price low while offering the best vending system on the Net.

ADVERTISING Each Virtual Shop's owner may also advertise his Virtual Shop on his own since every Virtual Shop has a unique address and it can be accessed directly, but in any case he will benefit by the joined advertisement we do for all our customers at no additional fee.

Still doubtful? No problem, get a FREE 30 days trial!!!

Vendor's Description

....Via LAN, WAN, telco, Internet/World Wide Web, and intranets, PECOS products automate the purchasing process, enabling licensees to decrease costs and reduce errors. From food service distribution or ventilation equipment manufacturer to PC and office product resellers, Elcom's business customers use a variety of multimedia formats, including video and sound, to market their product information.

Standard PECOS security features include ESI encryption, ESI registration and authentication, and ESI IPS (Individualized Packet Security). With the optional incorporation of advanced RSA cryptographic technology, companies who use PECOS can realize the cost savings and convenience of doing business via communications that are fully secure and remain private.

PECOS.net

PECOS.net is Elcom Systems' framework for creating electronic commerce applications. It provides core functionality to ensure that Elcom solutions are flexible, scalable and secure.

Catalog Template Server

The PECOS.net Catalog Template Server delivers information to the Web browser when an Internet client browses and/or orders items from an electronic catalog. Information is delivered to the browser by dynamically merging PECOS.net html Templates with a customer's electronic catalog data.

Security

The PECOS.net Catalog Template Servers provide security by running behind a customer's chosen firewall and interfacing with a customer's chosen Web servers. The PECOS.net Catalog Template Server is designed to run either on the same physical machine with a Web server or

on a separate physical machine. This design allows the PECOS.net Catalog Template Server to scale to the required transactional service levels.

PECOS.net HTML Templates

PECOS.net html Templates are designed to leverage available Web browser technology and authoring tools. Customers design their client interface with the best current tools and then add PECOS.net html Template extensions to create PECOS.net html Templates. The PECOS.net Catalog Template Server interprets the PECOS.net html Template extensions and dynamically merges data from one or more PECOS.net modules for presentation to the Web client.

PECOS.net Modules

PECOS.net Modules provide a reliable and efficient mechanism to implement business rules and extract catalog or other data for presentation to Web clients. These modules provide the glue between a request sent by a Web client and the presentation returned. They also manage the interaction between the PECOS.net Catalog Template Server and the Transaction Server System (TSS). PECOS.net modules are a proven and efficient technology to implement business logic in today's PECOS.net product line.

Transaction Server System

Transaction Server System (TSS) is a sophisticated Unix or NT based system that handles multiple tasks simultaneously, in a fully scaleable client/server methodology. The TSS resides between the end-user customer's PCs on the client side and the enterprise systems of your company, operating in either interactive or batch mode. It captures all transactions such as orders and inquiries from customers

Rtran

RTran or Remote Transaction service provides the connection-the network presence-between transaction clients on the end-user PC(s) and the transaction servers within the TSS. Subordinate RTran modules handle low-level communications via serial modem, intranet, extranet or the Internet.

Security

Security of all Transaction Server Interfaces is provided by Elcom Systems encryption; customer registration/authentication; Elcom Systems IPS (Individualized Packet Security); and a firewall proxy, RSA encryption is an option.

TSS Administration

TSS Administration is handled by the Server Manager, a Windows program that uses the Name Server to access and display the currently running servers and permits stopping, starting, and investigation of each one....

Vendor's Description

Now every business can take credit cards from their customers!

This is why we already have thousands of satisfied clients with thriving businesses:

You DO NOT sign a 48 month lease. You RENT a terminal month-to-month for only \$34 per month (or if you want to conduct electronic commerce over the Internet, we rent the software for only \$29 a month). The reason we RENT: If you decide you don't want to continue in your new business or some other opportunity arises, you are not locked in for the remainder of a long term contract.

There is no \$600-\$800 out-of-pocket expense for something you don't even know will pay for itself.

Refundable \$75 application fee....which means.....that if we are not successful in opening an account for you for some reason, your application fee is completely refunded.

Vendor's Description

A winner of Net Commerce 1997 VIP award.

NetPresentation

NetPresentationTM is the first communications service that gives any business the ability to deliver a self-running, synchronized audio-visual presentation to a mass audience on the Internet. NetPresentationTM is an ideal delivery mechanism for "Canned" presentations like: new product announcements, product training, refresher training, infomercials, etc. Virtually any message that uses audio.

NetSeminar

In December of 1995, E.N.E.N.'s Internet Design Team perfected NetSeminar™, the most revolutionary Two-Way, interactive multimedia business communications service available on the Internet today. NetSeminar™ is the first communications service that gives any business the ability to broadcast live speech and pictorial presentations to a mass audience, in real time, as it happens. Most importantly, NetSeminar™ is the only global service that allows the speaker to deliver an instant vocal response to audience questions. NetSeminars™ have been used for live, interactive public product announcements, sales training, application engineer training, business meetings, parenting workshops and a variety of private events.

NetInterview

NetInterview[™] is your opportunity to provide your customers with interesting interviews delivered over the Internet. They provide the opportunity to broadcast live interviews and digital pictures over the Internet. NetInterviews™ have been conducted at numerous trade shows, including The Design Automation Conference, Embedded Computer Show, Society for Information Display, Nepcon West, DSP and others.

http://www.hp.com/computing/sitemap.html
Corporate headquarters in Palo Alto, CA

Vendor's Description

From a March 7, 1997 Press Release:

... HP will announce a new direction at Internet World, focusing its efforts on Internet services and Internet commerce, according to company officials.

HP's new program, E-World, will consist of four product areas, or "spheres": E-Commerce, E-Consumer, E-Business, and Extended Enterprise Infrastructure.

The E-Commerce sphere will be headed up by the company's VeriFone subsidiary and will encompass products such as V-Suite for conducting Secure Electronic Transaction and Secure Sockets Layer transactions online. The E-Consumer sphere is for handheld Internet-enabled appliances, including digital cameras and VeriFone's Personal Automatic Teller Machine, which will allow users to connect the machine to a phone line and download cash to a smart card.

Although widespread implementation remains far in the future, VeriFone's smart-card system has caught one analyst's attention. From the Web Site: e-business Products and Frameworks

The current competitive environment creates heavy demands on business organizationsrequiring both operating efficiency and quick adaptability. That means not only must businesses develop streamlined administrative processes, find effective methods of working with suppliers, and maintain rapid, reliable responses to customer needs. They must also be able to revise these processes quickly and efficiently to meet changing conditions.

HP e-business Software can provide today's businesses with effective ways to meet these competitive demands. Combining the benefits of HP e-business products and customizable software frameworks, organizations worldwide will be able to optimize existing business processes and applications. Then, as the need for change emerges, HP software offers a powerful ability to respond rapidly, using a unique new change management technology-the HP Changengine. This valuable new development provides a quicker way to map IT solutions to business processes, keep software continuously adaptable, and seamlessly integrate new technology into existing systems.

The result for business organizations is a new level of control and responsiveness, providing faster time-to-market, reduced costs, and a sharper competitive edge. By incorporating the

power of Changengine technology, HP's e-business solutions can enable businesses to achieve quantifiable business benefits today-and in the future-for long-term value from their software investments.

For more on our unique collaborative approach to solving highly complex challenges, check out the Solution Delivery section of this Web site.

"They're working on infrastructure to allow us to use the same smart card on the Web as we use in the physical world," said Erica Regullies, an analyst at Giga Information Group, in Cambridge, Mass.

E-Business will consist of supply-chain management products and Extended Enterprise Infrastructure will consist of HP's traditional enterprise computing products.

Vendor's Description

News on Net.Commerce from a March 7, press release

IBM will make available an upgrade to its Net.Commerce product and split it into two separate versions, Net.Commerce Start and Net.Commerce Pro, according to sources close to the company.

Net.Commerce Start, priced at \$5,000 and targeted at small businesses, includes a store creation wizard. Net.Commerce Pro will include additional integration capabilities for larger companies that will allow the system to connect to MQSeries, CICs, Domino, SAP, electronic data interchange, and DB2 systems and will be priced at \$25,000.

Both versions of Net. Commerce will run on platforms including Microsoft Windows NT, IBM AlX and AS/400, and Sun Solaris.

IBM will also highlight six new customers of the application, including Brookstone and REI. REI is a former Netscape customer that decided to adopt Net.Commerce....

 IBM is also offering the Smooth Start Service to assist users configuring the Net.Commerce system.

--- END PRESS RELEASE ---

Other IBM E-Commerce Products: the NT Line:

DB2 technology is a proven winner in any world, including Windows NT. Reliable. Versatile. Scalable. This server software stores, manages and retrieves data. It operates according to defined rules for security, multiple user access and data management. No matter how large or

small your Windows NT world may be, DB2 makes your data safe, secure and easily accessible. Now, do you want to weave in audio, video, graphics, text and other non-traditional data types? DB2 handles it all with ease.

Visual Warehouse - the datamart builder for NT. Like a DataWarehouse a datamart contains informational data optimized for end user decision making and data analysis. With Visual Warehouse you can quickly build a datamart that leverages the use of your existing data e.g.: pull information out of Oracle, Sybase, SQL server and Informix and merge with host data from VSAM, DB2 or flat files. With built in job scheduling and extract capability the datamart is ready for use with your favorite query and reporting tools

Net.Data Version 1.0.10 is IBM's strategic product for enabling Internet/intranet access to relational data on a variety of platforms. All of the most prevalent databases can be data sources for your Web application: DB2, Oracle, Sybase, ODBC data sources as well as flat file data....

MQSeries for Windows NT brings business worlds together with reliable and transparent integration between Windows NT and 20 other major computing systems. With this award-winning software, you can integrate newly-developed NT applications into larger networks no matter how many platforms or network protocols are involved. You'll cut development and maintenance costs. Deploy business solutions faster. And gain a greater return on that hefty investment you've made in systems and resources...

Transaction Server for Windows NT, Version 4 is a new member of the IBM Software Server series, a family of modular application servers. IBM Transaction Server acts as a robust, enterprise-wide coordinator and integrator of servers, managing high-performance applications and data sources across the network.

ADSTAR Distributed Storage Manager

Develop applications faster with IBM's powerful family of VisualAge products. Your development teams will take advantage of more intuitive visual programming with a robust set of tools in all the familiar C++, Smalltalk, COBOL and Basic environments. Developers can then port these applications over to other platforms without having to hassle with complex system interfaces.

Building Application Development Tools for Windows NT

VisualAge® for e-business, VisualAge Java, VisualAge C++, VisualAge Basic, VisualAge Smalltalk, VisualAge Generator, VisualAge COBOL, VisualAge RPG, VisualAge DataAtlas, VisualAge TeamConnection, VisualAge WebRunner, IBM Component Broker

Lotus® BeanMachine™

Here's the first application and messaging server that allows you to take advantage of secure, interactive business solutions for the Internet and intranet. You can quickly build, deploy and manage applications to bring co-workers, partners and customers together. Domino provides support for a variety of clients and devices, including Web browsers, Notes clients, and POP3 mail clients. Notes is the world's leading software solution that combines messaging, groupware and the Internet. With Domino and Notes, you can effectively store, manage and distribute information because it is the central access point for finding and sharing the information that you need, whether it is located in e-mail, relational databases, or host-based systems, in your favorite desktop application or on the Internet.

Vendor's Description

SmartTime Network is a leading provider of e-mail, Internet access and personalized information services for smart telephones, pagers, hand-held computers and personal digital assistants. We provide our customers - your customers - with convenient, simple-to-use communication, information and transaction services customizable to their individual needs.

We develop our own content and aggregate content from some of the nation's most recognized and trusted information brands. We deliver the services your customers need most - right when they need them - to the devices they use every day. Whether e-mailing colleagues or checking a stock quote, customers rely upon SmartTime for superior services that are as individual as they are.

When you offer your customers services from SmartTime Network, you give them more value and generate incremental revenue. SmartTime provides users with information and services that are individually relevant, creating a positive experience that carries over to your brand. The result: enhanced customer acquisition, stronger, longer relationships that tether your customers and increased recurring subscriber revenue. What could be smarter?

Smart Time provides clients with total business solutions. Marketing, subscriber acquisition, enrollment, services operations, billing, customer service and retention - all from a single, flexible source. In fact, A to Z capabilities are the reason Regional Bell Operating Companies, PC and consumer electronic device manufacturers, wireless and hand-held companies choose SmartTime to help achieve - and surpass - their business goals.

The Internet Mall, Inc. 840 Apollo Street Suite 220 El Segundo, CA 90245

Tel: 310 662-1900 Fax: 310 662-1970

www.ordereasy.com

Vendor's Description

Now your existing Web site can have secure Internet transactions without changing Web servers. OrderEasy allows you to host your Web pages anywhere on the Internet. Simply add "Buy Now" buttons to securely commerce-enable your Web site and you'll be taking real-time transactions over the Internet in hours.

For security, OrderEasy uses the Netscape Secure Socket Layer (SSL) protocol, which all standard Web browsers support, and the CyberCash secure Internet payment server. This ensures that the transaction between the consumer's browser and the OrderEasy transaction system is totally secure. The OrderEasy server is locked down; the only open channel of communication into the server is through an SSL connection. Further, the customer credit card information is not archived on the server; it exists only long enough to clear the customer transaction. Optionally, the consumer can use a CyberCash Wallet for credit card payments. The CyberCash transaction server utilizes 1024 bit RSA and 56 bit DES encryption, the most powerful Internet encryption technology available. The OrderEasy system is fully registered and certified with VeriSign digital identification. The secure back-end electronic commerce service allows online consumers to easily buy from your web site.

DigiBox

Categories

Logistics

Contact

http://www.intertrust.com/products/flow.html InterTrust Technologies Corporation 460 Oakmead Parkway Sunnyvale, CA 94086

Tel: 408.222.6100 Fax: 408.222.6144 E-mail: info@intertrust.com

Vendor's Description

The InterTrust Commerce Architecture uses InterTrust's DigiBox secure containers to safely store and transport digital content. These tamperproof electronic packages allow commerce participants to bind business rules such as payment, usage, and metering rules to any kind of digital content—text, graphics, executable software, audio, or video. A creator can specify separate charges for such operations as viewing, printing and excerpting the content in a DigiBox container, and choose from many payment models such as pay-per-view and rent-to-own. The creator can tailor usage and payment rules to past buying patterns, classes of consumers (giving an automatic discount to college students, for example), and other criteria. As permitted by the creator, distributors can specify additional rules such as value-added markups. InterTrust thus supports traditional value chain management in the electronic world.

A consumer downloads a DigiBox from the distributor's Website content server. After reviewing and accepting the business rules, the consumer accesses the content under the control of the rules. This process automatically creates secure financial and usage records of the transaction and sends them to clearinghouses. Consumers can freely redistribute DigiBox containers to others, who can also use the content subject to the same business rules. The financial clearinghouse processes the transaction records from all users, charges the consumers' accounts, and credits the creator's and distributor's accounts according to the business rules that were packaged with the content. If the business rules in the DigiBox specify the metering of content usage, such usage information is collected when a consumer accesses a piece of content. This usage information is sent to a usage clearinghouse which processes and aggregates metering information, creates usage reports, and passes them on to the creator and distributor.

http://www.ipnet-solutions.com/edi.html Http://www.ipnet-solutions.com/customer.html info@IPNet-Solutions.com IPNet Solutions Inc. 4041 MacArthur Blvd. Suite 230 Newport Beach, CA 92660

Vendor's Description

IP*customer.link leverages the low-cost and global accessibility of the Internet to provide businesses a complete sales management system.

IP*customer.link features:

- Customized order guide
- Multimedia catalog
- · Real-time data
- Customer credit and account information
- · Supplier information
- · Efficient search tool
- · Secure transactions and data exchange

The IP*customer.link order guide is individualized for each customer and designed for quick execution of repetitive ordering tasks. Additional features include:

- Product preferences
- Custom pricing
- Product availability
- · Immediate order extension and confirmation.

IP*edi.link

IP*edi.link provides a low-cost and reliable framework for secure electronic commerce over the Internet.

IP*edi.link features:

- Support for all ANSIX.12, EDIFACT and custom EDI standards
- Multiple network support
- Configurable Transaction Routing
- · Custom standards and network options by trading partner
- · Custom preferences by trading partner and/or by user
- · Built-in editing and balancing
- Comprehensive EDI activity reporting
- Secure data transfer
- · Direct transaction entry
- Easy-to-use interface
- Online documentation
- · Context-sensitive help

IP*edi.link takes advantage of low-cost Internet standards to provide the reliability and security of traditional EDI solutions while dramatically lowering the costs of entry and operation. IP*edi.link can actually reduce EDI expenses by as much as 90% when compared to Value-Added Network (VAN) usage fees.

By providing custom EDI transaction standard and networking options for each trading partner, IP*edi.link creates a smooth migration path to Internet-based Electronic Commerce. For additional information about IP*edi.link, contact IPNet Solutions.

Plus, IP*edi.link features Configurable Transaction Routing (CTR), which allows you to specify different transport modes for each transaction for each trading partner. For example, you can now send mission-critical transactions such as purchase orders and invoices through your favorite value added network, and less critical transactions, such as a 997 functional acknowledgement, through the Internet. And, you can customize your network configuration for each trading partner. We know of no other EDI product that offers this level of flexibility.

3080 Ogden Avenue Suite 302

Lisle, Illinois 60532 Telephone +1 630.305.3200

Facsimile +1 630.305.6065

General information: info@mercantec.com

Vendor's Description

Mercantec SoftCart makes taking orders over the Web stable, secure and hassle-free for your business. SoftCart allows you to add commerce to an existing Web site or build a virtual store from scratch. Using SoftCart's templates, you can build a Web store and be ready to take orders on-line within days....

SoftCart accommodates the widest range of payment systems, databases, Web servers and browsers, order delivery options, and tax and shipping models. SoftCart is "cookie-free," utilizing StateTrack™ session tracking technology, which guarantees compatibility with all current browsers, is firewall-compatible, and does not intrude upon the shopper's privacy.

SoftCart 3.2 includes Microsoft Active Server Pages support, server parse first, support for Server Side Includes and support for Microsoft Wallet, plus an up-sell/cross-sell demo store.

StoreBuilder for Microsoft® FrontPage®

Mercantec StoreBuilder for Microsoft FrontPage offers Web builders the ability to use the latest electronic commerce technology from Mercantec in conjunction with FrontPage, Microsoft's Web site creation and management tool. Together, the two products make it easy to open up a virtual store which converts your Web site from a site that shows into a site that sells.

Software Developer's Kit (SDK)

The SoftCart SDK is designed for programmers and systems integrators. It includes developer-level technical documentation that will assist a programmer in extending SoftCart's functionality or integrating SoftCart with other WWW programs and legacy systems. It also includes sample programs (C and Perl) for the five primary SoftCart interfaces.

MicroSoft Site Server Commerce

Categories

Infrastructure

Contact

http://www.microsoft.com/siteserver

Headquarters in Redmond, WA

Vendor's Description

Note: See also Digital for Digital/Microsoft partnership

Commerce Server... offers the ultimate in customer experience, easy setup and administration, and the most advanced promotion-based merchandising technology available. Commerce Server can be used out of the box to set up a basic online store, or it can be customized to fit a merchant's specific needs. And Commerce Server is the only integrated commerce solution that will work with your existing relational databases.

Commerce Server plays a key role in Microsoft's strategy to support commerce on the Internet. It is designed for full integration with the Microsoft BackOfficeTM family of server software products, yet its open, extensible architecture can also be used successfully with third-party components. Microsoft is committed to working with customers and third parties to realize the full potential of the Internet....

Easy setup

You can, of course, design and set up your online store from scratch, but you don't have to. Starter stores, HTML templates for the development of an online "store," make it possible to build a sales- oriented Web site without having to design the site layout—or individual pages—from scratch. These building blocks can save a great deal of time and resources.

Starter Stores

The starter stores shipped with Commerce Server are in part basic templates, in part operational samples that can be modified to fit a specific sales model. They provide formats for a home page, product pages, company information pages, and other typical structures of a Web site designed for online selling. Templates consist of hard-coded HTML as well as page-generation directives (keywords) that specify what data should be inserted in a page, what queries should be run against the database, and so on.

Authoring and media tools

Commerce Server supports all standard HTML and HTML-related tools. As you design your online store, you can use your favorite software for creating Web pages and adding media enhancements – pictures, sound, or video.

Dynamic product presentation and management

With Commerce Server, you don't need advanced programming skills to put a wealth of product data online or to modify the contents of your store.

Dynamic page generation

Dynamic page generation means that HTML pages are created "on the fly," simplifying implementation and reducing costs. Thanks to dynamic page generation, your online store can keep pace with changing product specifications and promotions. Pages can be personalized according to data collected from individual customers and from the product database.

Product presentation

The system's database management functions allow you to offer individual products in any number of colors, sizes, versions, languages, and so on. Buyers can be prompted on an HTML form for more specific product options, ranging from personal monograms to optional warranty service.

Updated pricing and promotions

Dynamic page generation makes it possible to adjust product pricing in real time, as often as necessary. Featured products can be spotlighted; you can present a feature of the day, or a feature of the hour, if you like. Special sales promotions can be aimed either at the entire online audience or at particular buyers based on customer demographic data.

Cross-selling and up-selling

When a buyer selects an item for purchasing, the system can automatically suggest a complementary item (cross-selling) that is available in the store; for example, a buyer who selects a camera can be offered a tripod as well. Or the system can suggest a similar item of better quality (up-selling).

Ease of management

A user-friendly HTML form, designed by you or a service provider, makes it easy to add, remove, or modify product items and their attributes. Thanks to this form, in combination with dynamic page generation, you can focus your energies on managing your store—not on authoring Web pages or struggling with code.

Convenient order and inventory management

Commerce Server features real-time pricing that supports a variety of payment methods and adds in applicable tax and shipping charges. VeriFone vPOS software is available for secure payment processing.

VeriFone vPOS

For the first time, this industry-standard payment software is bundled with an Internet selling solution. When coupled with payment software available from your choice of financial institutions, vPOS gives you an integrated, comprehensive mechanism for handling credit card transactions securely over the Internet. vPOS communicates directly with the financial institution to effect authorization, capture, and other payment functions.

The components of the system are the Commerce Server, Commerce Utilities, Commerce databases.

Contact

http://www.minivend.com/minivend/_Original author of Vend is Andrew Wilcox, awilcox@world.sld.com. MiniVend is based on Vend 0.2, with portions from Vend 0.3, and is enhanced and modified extensively by Mike Heins, mikeh@minivend.com.

Vendor's Description

MiniVend is a full-featured electronic catalog system (commonly known as a shopping cart) that can be set up with multiple catalogs and as a Mall. It provides an interface complete with SSL security and database support.

MiniVend is freely-redistributable under the GNU General Public License. It runs on Unix and 32-bit Windows — Mac support is not available. MiniVend 3.06 is the current version. Its features and power rival the costliest commercial systems. If you want to see what it can do, check out some sites that use MiniVend.

MiniVend Features

- Users maintain a "shopping cart" for ordered items Multiple independent or shared catalogs allow one server to run many storefronts or a "mall"
- Complete SQL database support, including ODBC, via the powerful Perl DBI/DBD interface
- SSL support means secure and practical credit card ordering PGP support for secure
 off-site mailing of orders
- · Built in support for CyberCash
- Catalogs can be of almost unlimited size with excellent performance
- Multi-server mode for very high capacity on systems with sufficient memory
- Cookie support allows browsers to leave catalog and come back without losing session state – browsers that don't accept cookies will still work fine
- Multiple shopping carts allow buy-sell operations or classified add exchanges
- Built-in addressable database support with virtually unlimited rows and columns and field sizes-- no SQL is required to run Minivend
- Many, many, other features
- Powerful search capability

- · Fast binary search
- One-click scan and search -- build a whole search in a single HREF
- Complete Glimpse interface
- Range searching, numeric and alphanumeric
- · Embed searches within searches
- · Independent field search selection and return
- · Search any file, build results from any database
- · Complete control of appearance
- · Over 80 predefined tag functions
- · Powerful user-definable tags
- Catalog pages automatically selected -- either built "on the fly" from the database or pre-made for popular items
- Embedded Perl and conditional HTML allow complex and flexible catalog pages to be completely built from the database
- Full frames support
- · Full client-side imagemap support, including frame targets and form submits
- Flexible Ordering Process
- · Multi-level order screens with configurable field verification
- Shipping calculation, mixed modes, with UPS table lookup
- · Sales tax calculation, with fully independent non-taxable item and taxed shipping
- · Fully-configurable discounts with coupons or across-the-board discounts
- Fully-configurable quantity pricing
- Back end order entry capability, including mSQL
- · Fully configurable order reports
- Easy Administration
- Automated installation and configuration
- Numerous administration utilities
- Runs under Perl 5.003+ and almost any UNIX
- · Works well with all browsers.

Ready to Download at http://www.jango.com

Jango, the first intelligent Internet shopping assistant, links shoppers to the right merchant sites.

Seattle, Wash., May 13, 1997 — Netbot, Inc., Seattle-based Internet software developer, today announced the public availability of a beta version of Jango, the Internet's first intelligent shopping assistant.

Jango is an application for Windows95 or WindowsNT that works in concert with a user's browser (Microsoft Internet Explorer or Netscape Navigator). A user enters the name of a product they are shopping for and Jango automatically determines which stores and information sites are relevant. Jango then automatically consults those sites and quickly prepares reports for the shopper including such things as detailed product information, comparative reviews, product pricing, and manufacturers' specifications. When a shopper is ready to buy, Jango accelerates the process by automatically filling in order forms with information provided by the user during the original registration process.

Jango communicates with online stores using standard Web protocols and works with online stores' existing interfaces. From a store's perspective a Jango shopper has the same access patterns as someone shopping on their own, so Jango will not put any unusual performance demands on store sites until it brings a store many new customers.

NETSCAPE APPLICATION SERVER

The industry-leading Internet application server, Netscape Application Server 2.0 enables corporations to develop, deploy, and manage business-critical applications. The Application Server solution includes Netscape Application Builder 2.0 and Netscape Extension Builder 2.0 to ensure high availability and easy integration with existing enterprise systems.

With the acquisition of KIVA Software Corporation, Netscape became a leading provider of application server software for enterprise-class intranet, extranet, and Internet applications. Netscape now offers Application Server, Application Builder, and Extension Builder to Netscape customers developing and deploying business-critical applications that reach beyond the company to include partners, customers, and suppliers.

Application Server provides significant new features and unprecedented functionality for corporations implementing business-critical Internet and extranet applications where high performance, rapid development, scalability, uncompromised availability, and enterprise integration are critical to achieving their business objectives.

NETSCAPE SUITESPOT 3.5

WHAT'S NEW

Netscape SuiteSpot, the leading open platform for networked enterprises, is now available with new features to help you more effectively manage information, communicate and collaborate, and automate business operations with a secure administration infrastructure.

NETSCAPE COMMERCEXPERT PRODUCT FAMILY

A Complete Family of Business-to-Business and Business-to-Consumer Products The Netscape CommerceXpert product family of electronic commerce solutions was developed by Actra, a joint venture funded by Netscape and GE Information Services (GEIS). The commerce solutions outlined below are based on the same open protocols and scalable security architecture used for communications on the Internet. Any company with Internet access can easily become a trading partner and enjoy the enhanced security features provided by Netscape's electronic commerce solutions. Moreover, Netscape's electronic commerce products can interoperate with EDI networks and private value-added networks (VANs) so even companies with proprietary systems can take advantage of online commerce.

Netscape ECXpert. As the foundation of Netscape's commerce product line, ECXpert delivers EDI for the Internet. For more information about this product, please refer to the following: data sheet FAQ white paper

Netscape SellerXpert. This electronic product catalog uses EDI technology for order management via the Internet. For more information about SellerXpert, please refer to the following: data sheet FAQ

Netscape BuyerXpert. This Internet procurement system operates in a multisupplier, interenterprise environment. For more information about BuyerXpert, please refer to the following: data sheet FAQ

Netscape PublishingXpert. This comprehensive extranet publishing solution is a complete, end-to-end business solution that allows companies to share and sell their knowledge capital. For more information on PublishingXpert, please refer to the following: data sheet FAQ

Netscape MerchantXpert. This Internet retailing solution provides software that allows companies to provide online, personalized Internet store fronts. data sheet FAQ white paper

Vendor's Description

Internet commerce is no longer an option for market leadership. It's a requirement. That's why so many enterprises are turning to Open Market Transact™. The world's premier Internet commerce enterprise application, Transact is:

Comprehensive. Transact implements industry best practices for the entire Internet commerce cycle. In fact, Transact supports some of the most successful Internet commerce sites on the Web, including AT&T, Barclay's Bank, Time Warner Pathfinder, and Disney. Moreover, Transact supports the full range of business models — business-to-business, business-to-consumer, and information commerce — and allows businesses to offer physical goods, digital goods, and subscriptions. Delivered as an enterprise application, Transact can support every business without long and risky programming projects.

Flexible. In use by over 1,000 businesses in more than 25 countries, Transact supports multiple languages, currencies, payment methods and business models simultaneously. The modular structure of the system allows it to grow with the evolving needs of your Internet business. Its object-oriented application program interfaces (APIs) allow it to be tightly integrated with other enterprise systems, unique payment gateways, and custom Web sites. And its unique, distributed architecture allows Transact to support multiple divisions, lines of business — even multiple companies — with a single Transact server.

Transact takes care of the complexities of Internet commerce so you can concentrate on running your business.

Vendor's Description

QRS Catalyst: Management tools that transform sales data into actionable information.

Are you tired of looking for consumer trends in stacks of paper? Do you need a tool to efficiently identify changes in the market and track trends?

QRS Catalyst provides the information you need to improve revenues and maintain consumer loyalty by providing the best merchandise mix. Make an impact in business with QRS Catalyst.

QRS Catalyst, the newest service in QRS' group of Inventory Management Services, enables users to track which products are selling. This data can be tracked in several levels; by U.P.C. and store location or at the total partnership/product category level. Whatever type of data the user needs.

ORS Horizon: The best tool to accurately project consumer demand.

Predicting the future is very difficult and often incorrect. With QRS Horizon, the mystery is solved. Ranging from simple statistical methods to casual network technology, QRS Horizon supports a variety of forecasting methodologies.

While retailers have had SKU/store level sales information for years, their trading partners have not had consistent access to the same information. Manufacturers, on the other hand, generally have no such systems. Manufacturers do, though, have terrific knowledge about forecasting for their own production and analyzing overall market trends. Manufacturers have traditionally leveraged that information for their product development and for production

QRS Horizon "fits" the forecast to the sales history to develop the most accurate projection of demand. Users can see actual sales, the "fitted" data and the forecast demand in both spreadsheet and graphical formats.

Speedware OrderPoint

Categories

Sales, Logistics, Billing

Contact

http://www.speedware.com/products/store/ Joanne McGarry Speedware Corporate Public Relations Manager pr@speedware.com 416-408-2880 Ext. 264

Vendor's Description

What is Speedware OrderPoint? Speedware OrderPoint is a complete Internet Commerce application designed for companies who want to Web enable their sales channel quickly and cost effectively. Speedware OrderPoint consists of the front-end as the storefront, catalog, shopping cart, and payment schemes you need to get your secure site up and running, as well as the back-end office functions to keep information about product, price, customers and sales orders current...

Who is using Speedware Internet Commerce solutions today? ... Early adopters such as PCService Source, MaxData, Quad Graphics, Bank of Montreal, and more have Web enabled their businesses with Speedware.

What are Speedware differentiators? Speedware delivers innovative Internet-centric applications and tools for companies that need to get the job done. Speedware products can get you selling on the Web with a standalone commerce application, allow you to customize or create new applications with a leading Web development toolset (Autobahn), and allow you to manage the knowledge capital in your organization with business intelligence tools that support OLAP and managed queries (Media and Esperant). Speedware also offers industry leading 7x24 support for all products from a single 800 number.

...Speedware OrderPoint delivers a great depth of functionality, full scalability and power without compromising ease of use. It was designed to easily integrate with existing enterprise systems. Speedware OrderPoint is an extremely cost effective solution with an extremely attractive ROI for business to business commerce.

What about Speedware OrderPoint and EDI? While larger, more established businesses may have the capacity to implement EDI, a substantial number of their customers may not be in a position to do so. In such an environment, Speedware OrderPoint is seen as a complementary solution with EDI. These companies can implement Speedware OrderPoint to appeal to their second tier of clients, who may not have implemented EDI. It's also an alternative for mid-tier companies that have not already invested in EDI. Now they have a way to interactively communicate with their customers.

http://www.sun.com/products-n-solutions/

Vendor's Description

By Michael Moeller, PC Week Online and Deborah Gage, Sm@rtReseller 03.09.98

Sun to announce Java application server

Sun Microsystems Inc. is working on its most significant commercial Java product to date, creating a little competition with its development partners in the process.

As early as the JavaOne Developer Conference later this month in San Francisco, Sun's JavaSoft division could begin detailing plans for a Java application server for running business logic on a middle tier and connecting legacy systems to Java clients.

The server software, built on Sun's 8-month-old Java WebServer, bundles EJB (Enterprise JavaBean) support and a revamped servlet API structure.

The application server would be one of the first server products from JavaSoft, of Mountain View, Calif., originally formed as Sun's API development and licensing arm. The software will compete with similar products built with Sun's Java Development Kits by partners such as IBM, Novell Inc., WebLogic Inc. and GemStone Systems Inc.

JavaSoft President Alan Baratz acknowledged the competition but dismissed its impact.

"The application server market is a billion-dollar market," Baratz said. "There may be competitors, but there won't be many, and we'll take care of them as best we can."

Christopher Keene, president of Persistence Software Inc., in San Mateo, Calif., which plans to announce at JavaOne its own application server, PowerTier J, said users will be able to differentiate the products.

"Our product specializes in how an application server talks to a relational database," Keene said. "Other applications will focus on other pieces."

Trade Compass

Trade Compass- C A R A V A N

Categories

Logistics

Contact

http://www.tradecompass.com/caravan/

Vendor's Description

A 1997 Winner of NetCommerce VIP award.

Caravan is an open client-network software integration initiative (technology) that allows non-EDI capable companies or businesses with legacy software and hardware environments to use the Internet for business to business exchange of electronic documents. It will assist large companies in distributing EDI capabilities to small trading partners, and create a central hub where small trading partners can exchange data.

Caravan provides a low cost, easy to use service designed to serve as both a hub and to accommodate all sizes of trading partners involved in global trade

How Caravan Works.

Caravan extends Trade Compass beyond the browser to desktop applications which can integrate with existing accounting and business applications. Through the Web, existing business forms can be translated into electronic counterparts with relative ease. The data from these forms can be connected to purchasing, procurement, and logistics applications thereby eliminating paperwork and saving on data entry costs. Trade Compass Caravan is the next step in this process.

Industry Standard Partners

Caravan brings together industry standard software from Sterling Commerce, networked data warehouses from Microsoft, and trading partners around the world; creating a secure network through which all types of electronic commerce can flow. Caravan technology is built to industry standard specifications, such as ANSI X-12, and UN EDIFACT; constructed with industry standard technology from Sterling Commerce, and Microsoft; and supported by vendors such as Freightdata 2000, Unz Corporation , Integrated Trade Solutions Inc., OCR Inc. and other global trade and logistics software developers.

A Secure Network on Top of the Internet

Caravan creates a virtual private network on the Internet, which allows trading partners to communicate securely with each other. This network provides accountability, certification, and authentication of trading partners. Public Key Encryption is used to protect sensitive transactions, and verify the identity of all users.

Contact

http://www.netlink.net/cybernet/cybernet.htm NetLink Data-Communications, Inc. Email: Info@Netlink.net

Vendor's Description

NetLink's Virtual Shopping Cart allows the consumer to purchase items by putting them into a virtual shopping cart, which will automatically create an invoice. Once the consumer has completed selecting items, the Virtual Shopping Cart checkout stand automatically adds applicable sales tax and shipping fees.

The NetLink system then displays the invoice and requests a payment method. The consumer is then given the option to launch the CyberCash Wallet. If they do not already have the CyberCash Wallet software, it can be downloaded for FREE in a matter of seconds.

After the consumer chooses a credit card for payment, the rest is a series of encrypted automatic messages that travel between the parties and the credit card networks. NetLink is a CyberCash VIP business partner.

WebVision, Inc 19950 Mariner Avenue Torrance, CA 90503 1 (800) 932-8840 FAX 1 (310) 793-4462

Vendor's Description

WEBtropolis Product Suite

To understand the WEBtropolis methodology, which is based on sophisticated links to relational databases and other back-end objects, it is useful to conceptualize three layers in the development of a WEBtropolis site.

At the base of the triangle is the WEBtropolis Framework. The framework layer represents the core technology and includes a series of stand alone tools which are able to accomplish a variety of tasks. These tasks might include: user authentication, object integration with the web server, database access, transaction processing, search engine, payment gateway processing, auction creation and other advanced web site functions.

At the center of the triangle are the WEBtropolis Applications. Quite simply these applications are a combination of framework tools which work together to perform a coordinated function such as an ecommerce or auction site. All WEBtropolis applications listed share many common elements yet their function can be quite different. Our most popular applications include ecommerce (ORDERnet), auction (AUCTIONnet) and Intranet/database integration.

At the top of the triangle is the WEBtropolis Business Interface. This final layer allows WebVision to customize the front-end of the WEBtropolis application for a particular customer or industry. The front-end business interface is written in simple HTML/ graphics. The front-end HTML calls on the framework tools within the WEBtropolis application to provide intelligent processing for the information collected at the interface. This feature allows developers to quickly change the graphical look of a site without having to adjust its powerful information processing programs on the back-end.

Vendor's Description

Introducing VisualCASH 2.0 for Windows. For as little as \$299, you are now able to accept 'plastic money' as secure and easy as CASH. VisualCASH is a powerful credit/debit authorization and settlement management software that offers you many great advantages and conveniences. All you need to do is to authorize and deposit without even leaving your desk, and VisualCASH will handle the rest for you. No more exhausted hours processing paper slips, doing calculations, making deposits and adjustments, and returning declined credits and cheques. No more lost product and service revenue due to ineffective payment enforcement. And no more inconveniences for your customers such as 'signature on bank slip', 'fax backs', 'CODs,' and 'certified cheque or money order only'. VisualCASH makes collecting credit/ debit payment so easy that you may now operate your business cost effectively, effortlessly, and with total customer satisfaction.

New! VisualCASH Pro 2.0 for professionals. Included are features in the VisualCASH standard edition, the VisualCASH network edition, plus VisualCASH DDE, OLE Automation (EXE and DLL) and Network File servers! Now integrating credit/debit authorization into your application is as easy as sending one line of message to VisualCASH server as in the following examples:

Authorize@Purchase@4003010123456780@\$499.00@9808@... to authorize it!

or Store@Purchase@4003010123456780@\$299.00@9808@... to batch it!

And VisualCASH will pass back the authorization information, including formatted merchant and customer receipts to your application. Enable your Web Server for live credit card authorization? Or add VisualCASH to your Microsoft Office applications!

PLUS1®

IT ALL ADDS UP!

THE TIME ADVANTAGE

We talked with servicing dealers like yourself, discussed what was needed to speed up parts retrieval and then developed PLUS1® with you in mind.

PLUS1® gives you a significant advantage over microfiche. With PLUS1®, your computer handles the time-consuming manual search and cross referencing for you. You not only get the illustrations and part numbers found on microfiche, but prices, supersedences, bulletins and other key product information at just the touch of a button. Our simple menus and on-screen help make the system productive from day one for anyone with even minimal computer experience.

THE PROVEN ADVANTAGE

PLUS1® is dealer-tested software, proven successful in helping dealerships stay competitive by improving their efficiency. Dealerships are moving repair jobs past the parts counters quicker by speeding up the parts lookup process. Since 1991, when PLUS1® first became available, other companies have entered the parts retrieval software field including some who aren't even computer software companies. Why? Because they saw the demand for a program like PLUS1®. So when you're ready to make the move from microfiche, turn to PLUS1®, a software company with over 6 years of proven success!

THE INVESTMENT ADVANTAGE

When you purchase PLUS1®, you are buying a complete system that will start paying for itself immediately.

INDIVIDUALIZED PROGRAMS

PLUS1® offers the basic parts lookup program. It works on the computer you may already have set up and can integrate with most dealer management systems. But if you need more, we have the resources for that as well. We can help you select and implement a top quality point of sale program, electronic data ordering and computer hardware. With PLUS1®, you decide what feature you need and purchase only the ones you will use. No extra expense for features and programs you won't use.

CHOICE OF MANUFACTURERS

PLUS1® offers an extensive list of manufacturer databases. Whether you service one or multiple manufacturers, with PLUS1®, you can access the parts information for the lines you carry. You can add additional database subscriptions at any time. We'll notify you when additional manufacturer programs become available.

PERSONALIZED SERVICE

With PLUS1® you receive personalized service. Our commitment to you goes beyond the initial purchase of the software. Your subscription to PLUS1® entitles you to receive free upgrades, improvements and new software features as they are released. You will also receive individual assistance from our technical support line. You'll talk personally with someone who not only understands the software, but understands your business.

PLUS^{1®}

YOU GET WHAT YOU PAY FOR !!!

* PLUS¹ started and has lead the industry in Electronic Cataloging since 1991.

22 years serving the OPE dealer and manufacturer with publishing services. A SAFE INVESTMENT!!!

* PLUS¹ requires no computer experience.

Echo - 1996

Designed by dealers for dealers and proven to have fewer look-up steps.

IT'S SIMPLE, EASY AND FAST TO USE!!!

* PLUS¹ has consistently been the first to publish and distribute OEM databases.

 $^{\star}\,PLUS^{1}$ is integrated with more popular Dealer Business Systems.

More options to select the total package that fits your dealership.

PROTECT YOUR EXISTING HARDWARE/SOFTWARE INVESTMENT!!!

* PLUS¹ provides subscriber preferred discounts.

New databases are discounted/prorated. A MAXIMUM ANNUAL RENEWAL = \$500!!!

* PLUS¹ is Windows compatible.

PLUS¹ operates under all Windows versions, including WIN95.

THE COMPATIBLE INVESTMENT!!!

* PLUS¹ databases are permanent.

No disappearing act after subscription lapses! YOU BUY IT, YOU KEEP IT!!!

* PLUS¹ offers leasing options.

Hewlett Packard computer with on site service. Software loaded and ready to plug and play. NO HASSLE, PAY AS YOU GO!!!

PLUS¹ IS GUARANTEED.

IF NOT SATISFIED, YOUR INVESTMENT IS REFUNDED!

PLUS¹ is a service of ARI NETWORK SERVICES, INC. 330 E. Kilbourn Ave., Milwaukee, WI 53202

Meppel from ARI Network Services, Inc., is an Electronic Commerce package which buries complex EDI structures and allows you to focus on running your business rather than learning about EDI. Youn will have all the power you need to communicate with your trading partners. Plus, Meppel's interface is so simple to navigate that you will save time and improve the quality of the data at the same time.

MEPPEL'S OPEN ARCHITECTURE

Built with MS Access and MSVisual Basic, Meppel makes iteasy to get data in and out of applications. You can use Crystal Reports Professional to generate ad hoc reports. Point of purchase systems which are ODBC compliant can populate Meppel directly.

BURIED EDI

EDI probably isn't your core competency. It is ours. Meppel is custom tailored to incorporate your business rules and needs with all the EDI structures, codes and industry guidelines. Our goal is to keep EDI as far away from you and your trading community as possible. This means you can focus on the business data you are familar with. The results:

- Improved accuracy, even when compared to other Electronic Commerce Systems
- · Faster buy in from trading partners
- Improved timeliness of reports
- · Fewer required resources

MEPPEL AS MIDDLEWARE

If your trading partners have the ability to write an extract routine from their business system. Meppel can be setup to run in a fully automated mode. Meppel helps you and your trading partners get closer to that elusive goal of computer to computer transfer of business data without human intervention. All that is required is a few minutes each day to check for incoming E-Mail and occasional (probably weekly) maintenance of the product directory and processing location directory updates.

MEPPEL AS END USER ELECTRONIC COMMERCE SOFTWARE

If you or a larger number of your trading partners choose

not to intergrate Meppel with your business system, there is

another alternative: Meppel has well developed Edit & Data

Entry screens for all the business transactions you need.

And you still focus only on the business data you use

every day. With spreadsheet like data entry and dynamic error checking, you and your trading partners can spend less time entering data and more time running your businesses.

ACTIVITY FOCUSED

Possibly the most noticeable feature in Meppel is the start up screen. Rather than being populated with trading partners' icons, you will notice the icons are focused on what users actually do with Electronic Commerce software. After much research ARI realized that users are far more concerned with the type of work they are doing than who they are communicating with.

E-MAIL WITH ANYONE

Meppel goes beyond "EDI." Because Meppel communicates using TCP/IP protocol, you can exchange E-Mail with anyone on the internet.

MEPPEL AS END USER ELECTRONIC COMMERCE SOFTWARE

If you or a larger number of your trading partners choose not to intergrate Meppel with your business system, there is another alternative: Meppel has well developed Edit & Data Entry screens for all the business transactions you need. And you still focus only on the business data you use every day. With spreadsheet like data entry and dynamic error checking, you and your trading partners can spend less time entering data and more time running your businesses.

SUCCESSFUL SUPPORT HISTORY

Ari has been providing stellar 24 by 7 support for our network customers for years. You will receive total end-to-end supportfor your Electronic Commerce needs when Meppel is used over ARI's "Intranet" and you can also take advantage of ARI's database services. We truly become a single source of support with one phonenumber for software, network and translation support. What's more, we don't just support the base package, but all the custom

business rules as well.

TECHNICAL REQUIREMENTS

Required:

- •IBM compatible DX 486-33 or higher
- •30 to 50 MB disk space available(depending on the size of location/customer and product databases)
- •14,400 bps V.34 modem or higher
- •Windows 3.X
- •VGA monitor
- •8 MB RAM

Recommended:

- Pentium 75 Mhz processor or higher •50 MB available disk space
- •28,800 bps V.34 modem or higher
- •Windows 95
- •SVGA monitor

•16 MB RAM

FOR IMMEDIATE RELEASE: Monday, March 2, 1998

BA Merchant Services, Inc. and EDS Team up to Enable Convenient, Nationwide Telephone-Based Credit Card Payment of Taxes

Paying taxes becomes less taxing with 1-888-ALL-TAXX

SAN FRANCISCO, Calif., and PLANO, Texas — A new nationwide electronic payment service is about to make paying state and local taxes and other government fees a lot easier and more convenient - by giving you the option to pay using a touch-tone telephone and charging it to your credit card, 24 hours a day, no matter where you are.

The new service, developed by BA Merchant Services, Inc. (BAMS) and technology services company EDS, is the first electronic government fee payment program offered to government agencies nationwide.

The service offers benefits to both taxpayers and government entities. It gives taxpayers the convenience of paying by credit card and avoid the hassles of standing at the counter to pay or mailing in a check. For participating agencies, it offers a widely accepted payment mechanism without increasing their operating costs. "Payment of state and local government fees through an automated telephone/credit card system represents another step forward in the movement toward electronic bill presentment and payment," said Albert Nekimken, electronic banking analyst for Input Research.

"Consumers will love the convenience of electronic payments for everything, including their local government obligations. At that point, there will be no turning back to licking stamps."

Here's how the service works. A notice in your statement or bill includes the 1-888-ALL-TAXX telephone number for payment via credit card. Your call is answered by an interactive voice-response unit, or VRU. By following prerecorded voice prompts, you use any touch-tone telephone

to enter the government entity's tax bill number, the payment amount and your credit card account number. In a matter of seconds, you receive an authorization number that payment is accepted. A convenience fee, based on a percentage of the total payment, is charged to your credit card account.

BAMS has primary responsibility for marketing the service to state and local governments and processing credit card transactions. EDS powers the behind-the-scenes technology engine and brings its world-class systems infrastructure to serve as the technical backbone of the service. PhoneCharge, Inc., a sales and marketing firm, also participates in direct sales to government entities and provides consulting and marketing communications services to promote the service to taxpayers.

The new service has gotten the attention of several state and local agencies. "Consumers like payment options, and we think our constituents would appreciate the option and the convenience that paying by credit card via the telephone provides" said Shawnee (Kan.) County treasurer Rita Cline, who recently signed up for the service. "And because it's a service, somebody else pays for the equipment, so we don't have to invest in the technology or have to maintain it."

For more information, government agencies can call BAMS at 602-594-2141 or PhoneCharge, Inc. at 516-671-2121 ext. 11.

BA Merchant Services, Inc. is one of the largest payment processors in the United States. The company processes over 500 million credit card and debit card transactions for over 150,000 retail locations with more than \$30 billion in credit card sales and over \$3 billion in debit card sales each year.

BAMS is an affiliate of San Francisco-based BankAmerica Corporation, the nation's fifth largest bank holding company, with more than 1,800 branches and more than 7,700 ATMs. With offices in 38 countries throughout the world, BankAmerica provides a wide array of retail and wholesale banking products and services to consumer, corporate, and government clients. As of December 31, 1997, BankAmerica had approximately \$260 billion in assets and \$172 billion in deposits. Bank of America can be reached on the World Wide Web at https://www.bankamerica.com and on America Online at Keyword: BofA.

EDS, the official information services provider for World Cup 1998, is a leader in the global information services industry.

The company's approximately 110,000 employees specialize in applying a range of ideas and technologies to help business and government customers improve their economics, products, services and relationships. EDS, which serves customers in 44 countries, reported revenues of \$15.2 billion in 1997. The company's stock is traded on the New York Stock Exchange and the London Stock Exchange. EDS can be visited via the Internet at http://www.eds.com.

e-business Products and Frameworks

The current competitive environment creates heavy demands on business organizations-requiring both operating efficiency and quick adaptability. That means not only must businesses develop streamlined administrative processes, find effective methods of working with suppliers, and maintain rapid, reliable responses to customer needs. They must also be able to revise these processes quickly and efficiently to meet changing conditions.

HP e-business Software can provide today's businesses with effective ways to meet these competitive demands. Combining the benefits of HP e-business products and customizeable software frameworks, organizations worldwide will be able to optimize existing business processes and applications. Then, as the need for change emerges, HP software offers a powerful ability to respond rapidly, using a unique new change management technology-the HP Changengine. This valuable new development provides a quicker way to map IT solutions to business processes, keep software continuously adaptable, and seamlessly integrate new technology into existing systems.

The result for business organizations is a new level of control and responsiveness, providing faster time-to-market, reduced costs, and a sharper competitive edge. By incorporating the power of Changengine technology, HP's e-business solutions can enable businesses to achieve quantifiable business benefits today-and in the future-for long-term value from their software investments.

Sun to announce Java application server

By Michael Moeller, PC Week Online and Deborah Gage, Sm@rtReseller 03.09.98

Sun Microsystems Inc. is working on its most significant commercial Java product to date, creating a little competition with its development partners in the process.

E-mail this story

Basy print

Related Stories

Microsoft Window-izes

As early as the JavaOne Developer Conference later this month in San Francisco, Sun's JavaSoft division could begin detailing plans for a Java application server for running business logic on a middle tier and connecting legacy systems to Java clients.

The server software, built on Sun's 8-month-old Java WebServer, bundles EJB (Enterprise JavaBean) support and a revamped servlet API structure.

The application server would be one of the first server products from JavaSoft, of Mountain View, Calif., originally formed as Sun's API development and licensing arm. The software will compete with similar products built with Sun's Java Development Kits by partners such as IBM, Novell Inc., WebLogic Inc. and GemStone Systems Inc.

JavaSoft President Alan Baratz acknowledged the competition but dismissed its impact.

"The application server market is a billion-dollar market," Baratz said. "There may be competitors, but there won't be many, and we'll take care of them as best we can."

Christopher Keene, president of Persistence Software Inc., in San Mateo, Calif., which plans to announce at JavaOne its own application server, PowerTier J, said users will be able to differentiate the products.

"Our product specializes in how an application server talks to a relational database," Keene said. "Other applications will focus on other pieces."

Sun has not set pricing or availability for the application server. WebServer 1.0 cost \$295 when it shipped in July 1997, and a free 1.1 upgrade shipped in December.

Sun's application server—a formal name has not been determined—includes Java WebServer's HTTP services and a development tool kit. Legacy systems partners will provide applications and connectivity for messaging, transactions, directory and database services.

Developers will be able to create reusable EJBs to perform back-end or mainframe transaction processing. EJBs can then be combined with other components built with the servlet API and other Enterprise Java APIs such as Java Naming and Directory Interface, Java Database Connection, or Java Messaging API.

The final Enterprise JavaBeans 1.0 specification also is due to be released at JavaOne, JavaSoft officials said.

Notes about Report for NDD

March 16, 1998

To: Wilson, Les

Fr: Michael

I'm turning over the following:

- Introduction
- · Table 1 (Summary Table)
- · Table 2 (Research Resources)
- · Individual Listings
- A few more sheets to add to the "web print outs" section

Except for the print outs, I'm also providing these in files on disk, in Word for Office '97 format. The tables are both in one file with separate sections.

Notes:

- There are currently 59 different vendors (and still well over 100 distinct products).
 I took out I-track and Jupiter as we decided at the meeting, and later removed
 Vitek for the same reason. But I added Microsoft and a few others, based, among other things, on the Net Commerce VIP awards -- It seemed to me that these ought to be represented where they were appropriate.
- Note that we need to remove I-Track, Jupiter, and Vitek from the existing Web Print-outs I turned over to Les last week.
- I never found an actual product -- the spider or other crawler -- for Andersen Consulting, but left them in?? They could be removed if desired???
- Since Les had suggested it at the meeting last week, I put my own observations at the end of the Introduction. These may or may not be appropriate....

are heavily represented: sales, logistics, billing, and infrastructure. The Support category is sparse, and we also found few products that targeted Marketing, which is still largely dominated by consulting services, not software products.

On the Customer side we found a few products for searching (shopping) and procurement generally. We could not find a Receiving product as a primary category, though some Procurement products may also cover receiving.

The "heavy-hitters"—the largest organizations focusing on I-Commerce, such as IBM, Microsoft, Sun, Hewlett-Packard, and others—seem to focus on primarily on Infrastructure, on hardware and software servers, databases, transaction processing, security and other basic structures. The secondary focus of these giants is on (a) web store-front commerce (Sales) and (b) intranet business-to-business structures and solutions (Logistics) generally.

Many smaller players are focusing on particular niches, including variations on store fronts, industry-specific solutions, industry specific databases, etc.

About the Product Grouping and Descriptions

Generally, in the summary table (*Table 1*), a vendor's products are grouped together unless the products is distinct or unique (that is, distinctly different from other products by the same vendor or distinctive in a representing a category or niche).

In the Individual I-Commerce Vendors and Their Products section, we offer a "Vendor Description" of the products. Unless otherwise noted, this description is an edited version of the vendor's presentation on the web site. The exceptions include recent press reports giving recent news of on significant products. The "Vendor Description" varies somewhat, depending on the nature of the vendor:

- When the Vendor represented a single product or simple set of related products, we provide a description of those products. (E.g., CyberCash, Mini-Vend, Cart32)
- When the Vendor is a larger concern primarily involved in an large array of I-Commerce products or services, we attempted to offer an overview of the range and scope of the products involved. (E.g., Sterling Commerce, Harbinger.)
- Where the Vendor is a giant with far too many products to attempt to summarize, we attempt to focus on an overview of the company's products or range of products most closely targeting the I-Commerce client. (E.g., IBM, Hewlett-Packard, Sun, Digital.)

Comments about the Findings

This research tends to confirm what one might assume about a young industry: (1) that many resources are going into building and improving the infrastructure, and that specific products are in a generalist stage, at least for niches other than financial commerce. The few identified niche products tend to be large-industry based, focusing on, for example, vehicle parts, shipping and freighting, or utility companies.

We found no small-business, niche-oriented products: no "Create Your Own on-line Delivery Restaurant," for example, or "Create Your Own On-Line Hardware Store," or "Put Your Local Courier/Delivery Service On-Line". Of course, our research was limited in time and scope, but at least it may be said that if these types of products are out there, they are not easy to find.

Figure 1. The product categories represent targeted phases of the commerce flow.

Summary of Findings

As summarized in *Table 1*, Fifty-nine vendors marketing well over 100 I-Commerce products were identified.

The Distribution of Products into Categories

As the search progressed, we found a heavy preponderance of "Web Store Front" or "Internet Catalog" products geared to setting up a retail sales presence. We might have identified 50 of this category alone, ranging from "Rent-a-Store-Front-From-Us" instant, cheap solutions to full major packages of large hardware servers plus software infrastructure to help medium to large retailers enter into I-Commerce.

We chose to modify the search to attempt to include a wider variety of categories and avoid listing only Sales and Infrastructure products to the exclusion of others. We found products in all categories. Nevertheless, on the Vendor side certain categories

CYBERCASH SET COMPLETE PAYMENT SOLUTION

CyberCash enables merchants, banks, processors, and consumers to use SET (Secure Electronic Transaction) as a global payment protocol while building on the security and convenience long associated with the CyberCash payment solutions.

CyberCash has adopted the new SET protocol and is incorporating it into CyberCash's suite of Internet payment solutions. The transition to SET will provide secure, open standard-based solutions for the many merchants, banks, processors and consumers including those using CyberCash's existing services.

What Is SET?

The SET protocol is a collection of encryption and security specifications used as an industry-wide, open standard for ensuring secure payment transactions over the Internet.

A Cross-Industry Cooperative Effort

Developed by VISA, MasterCard and key technology Leaders, the primary goals of SET are to protect the credit card system, establish consumer confidence in the Internet as a marketplace, and build transactions volume over this new commerce channel. SET's standard for security procedures and technology will ensure consistent implementation among vendors, card companies, and financial institutions.

Furthermore, SET establishes a method for interoperability of secure transactions software over multiple, popular hardware platforms and operating systems.

CyberCash And SET: The Next Generation Of Secure Online Technology

CyberCash has been enabling secure Internet Transactions since 1995. With the implementation of the SET protocol, CyberCash offers the next generation of secure payment card services. SET brings consumers and web merchants together in a secure fashion so that both can benefit fully from an exciting new marketplace.

CyberCash will provide a simple migration path to SET. This will

ensure continued interoperability across software and hardware platforms, continuing its role as the leading provider of Internet payment services. The SET protocol will authenticate cardholders, merchants and banks; assure confidentiality of payment information; ensure that messages have not been corrupted during transit; and provide for interoperability among different software and hardware platforms.

Benefits Of SET

Merchants, banks, processors and consumers alike will have the confidence -- when they see "SET-compliant" of knowing each transaction is protected by a security protocol validated, approved and standardized by industry leaders.

Merchants are protected from:

- · purchases with unauthorized payment card
- · purchases denial from cardholders

Banks are protected from:

· unauthorized purchases

Consumers are protected from:

- · merchant impostors
- · theft of credit card number

The Promise Of SET

SET is designed to protect the confidentiality of personal and financial information. It uses digital certificates to authenticate the parties in a payment card transaction.

SET will provide buyers and sellers in the virtual world the ability to engage in commerce with an even greater level of trust and confidence than they experience in a payment card purchase in the physical world.

CyberCash offers a complete suite of global payment services including payment cards, micropayments and electronic checks. CyberCash services will be compatible with published SET standards, ensuring interoperability. CyberCash's SET secure services are the most convenient and flexible way to conduct financial transactions on the Internet.

Internet Servers

A server is generally the first major investment an organization makes after deciding to take advantage of the low-cost, effective communications afforded by the Internet. A company can choose from an array of powerful Alpha and Intel servers, and select either the Digital UNIX, Windows NT or OpenVMS operating system environments.

Visit the <u>DIGITAL WebServer Gallery</u>, a showcase of customer websites powered by

DIGITAL servers.

These companies know that when it comes to the web, nothing beats a DIGITAL server. They all use DIGITAL servers to power their websites. Just click on their names to view their sites. If your DIGITAL system isn't registered yet and you'd like to make it part of the list, register now!

Server Products you can buy from...

DIGITAL AlphaServer [™] Family

"DIGITAL AlphaServer systems were designed with Internet applications in mind. Providing the robust scalability and

high-availability designed to ensure that critical operations are always accessible, their proven 64-bit architecture is perfect for:

- Internet Service Providers looking to support their hocky-stick subscriber growth rates,
- · IT professionals looking to ensure seamless intranet

communications across their heterogeneous computing environment, and

 Businesses looking to provide 24x365 access to their Web store fronts

Moreover, DIGITAL maximizes your server investment by equipping every AlphaServer system with an extensive array of Internet tools - guaranteeing your AphaServer 'breaks out of the crate' Internet Web Server ready. Click here to learn more about the DIGITAL Internet-Energized line of AlphaServer products, or click on any of the servers below for information specific to that platform."

Alpha Server 800

The ultimate communications server.

AlphaServer 1200

Ideal solution for Web servers, and business applications.

AlphaServer 4100

An ideal entry point with the flexibility you need to grow.

AlphaServer 8200 / 8400

Breakthrough servers for today's business-critical applications.

DIGITAL Prioris ™ Family

Prioris HX 6000 Series

Future-proof scalability and superior expansion.

Prioris MX 6200

Excellent price/performance for robust departmental networking.

Prioris LX

Perfect for small networks or branch offices.

Internet Business Solutions

Updated: 05 December 1997

The virtualStore Program from Digital

Open Your Electronic Store on the Internet!

The virtualStore Program:
A total Internet commerce solution from Microsoft and Digital!

Online commerce: a booming retail channel

Selling products and services online is becoming a burgeoning method of doing business. The projected growth is explosive:

- According to a recent study by Forrester Research, Inc., the value of retail electronic commerce could skyrocket from \$500 million this year to \$7 billion by the year 2000 -- with 435,000 businesses engaged in electronic commerce.
- In a May 1996 survey, Deloitte & Touche found that over 60 percent of Internet-capable users up to age 34 had made an on-line purchase within the previous 12 months. In 1997, over half of all current web users spend time searching the Internet for information before making a purchase.

Progressive companies now rely on the Internet to expand their business reach, thereby increasing sales. And when they use this new distribution channel, their market expands worldwide!

Benefits

- A complete commerce solution of hardware, software, and services for online merchandising.
- Sell your products worldwide -- 24 hours a day.
- Dramatically lower your operating costs.
- Offer your customers the convenience of shopping online -- from their home or office.
- Modify your merchandising immediately: update catalogs, post special promotions, and offer discounts in a flash.

From customer demand to the Digital solution

When businesses started to thrive by selling on the Internet, hundreds of merchants asked how they could increase their own revenues with online sales. They saw the advantages that the electronic buying and selling of goods and services can provide. But merchants are faced with a dizzying array of hardware, software, and support choices. Fortunately, Digital makes it easier to choose. Merchants need:

- A fully functional, Internet commerce-enabled web site -- capable of accepting business and generating secure credit card transactions.
- · Components from proven, reliable industry leaders:
 - A server system, configured and sized

- All required software
- · A complete set of services, to get the site up and keep it running
- Credit card payment processing and clearing services

Digital responded with a fully-integrated solution. One that offers speed... reliability... quality service and convenience... online. Digital proudly offers the <code>virtualStore</code>.

What is virtualStore?

The virtualStore is a complete, packaged Internet commerce storefront solution from Digital and Microsoft. The components include:

- Hardware: A server system from Digital -- tailored to fit your specific needs.
- Software: Site Server Enterprise Edition -- specialized for the creation and management of Internet stores; running with SQL Server database on the Windows NT operating system -- all from Microsoft.
- Services: A fully customized service and support package from Digital. The
 package contains everything needed to implement the store: from installing
 software, to loading your product database, to testing the order processing
 procedures.
- Transaction Processing: Authorization, authentication, and clearing services.
 Internet-based credit card payment processing software -- from providers such as VeriFone, CyberCash, or Trintech.

By choosing *virtual*Store, merchants interface with Digital and work with trusted, experienced partners who are easy to do business with. Partners who understand the technologies required to conduct business online.

QUOTE: "Large companies and mid-sized businesses can now purchase a total solution for their Internet commerce requirements. Digital's solution delivers the affordability and expertise companies need to take advantage of this exciting new trend in business."

Ted McKie, Director of Business Development Digital's Internet Practice

The *virtualS*tore solution meets the growing demand of companies interested in pursuing retail business, sales, and marketing on the Internet. And it allows these companies to reduce costs. Improve customer support. Gain a competitive advantage in the market. All from a company that works with your business—to ensure that the solution takes your entire selling cycle into account.

The virtualStore: tailored for your business

The virtualStore is easy to purchase, set up, and manage. Digital's set of solutions packages and consulting services are preconfigured for a variety of platforms and price ranges. All are based on Microsoft Site Server Enterprise Edition and Windows NT. Each includes the software and services necessary for success.

The scalable hardware, software, and support can be integrated with your company's current way of doing business. You can continue using existing components that work for you, building them into the specific solution that your business requires.

Digital's limit-shattering hardware

You can select from Alpha or Intel hardware systems for a complete solution, sized to fit your business. Digital servers are perfect for Internet commerce, offering high performance and reliability, with a scalable family of products to address your needs.

Alpha-based solutions include:

- · AlphaServer 300 4/266MHz
- AlphaServer 1000A 5/400MHz; Pedestal or Rackmount
- AlphaServer 4100, 2 Processors, 5/466MHz; Pedestal or Rackmount

Intel-based solutions include:

- Prioris HX 6000, 200 MHz
- Prioris ZX 6000, 2 Processors, 200 Mhz (and Rackmount)
- Prioris ZX 6000MP, 4 Processors, 200 Mhz (and Rackmount)

Your Digital representative or authorized reseller will work with you to determine configurations based on your needs.

Microsoft Software

Microsoft provides complete store-building software, for merchants who want to sell on the Internet; taking full advantage of their industry-standard Windows NT operating platform. In addition, there are a number of software components ("plug-ins") from third parties that can be added to Site Server Enterprise Edition to handle specialized tasks — such as shipping-and-handling and tax calculations.

The Microsoft Site Server Enterprise Edition software lets you:

- · Put your catalog online
- · Tally the contents of an electronic "shopping cart"
- · Provide a handy user interface for your customers

Transaction Processing

The virtualStore offers many solutions for credit card authorization. One of these is VeriFone: a recognized innovator in providing payment-enabling, hardware/software solutions. The company transfers their "physical world" payment experience to the world of the electronic payment. vPOS payment software from VeriFone:

- · Offers an easy-to-use interface for store operation
- · Sends electronic transactions directly to the bank
- Supports existing business processes
- · Implements secure transactions

QUOTE: "Wells Fargo was the first in the industry to offer secure credit card processing over the Internet. The *virtual*Store Program enhances Wells Fargo's ability to offer merchants flexible and powerful solutions for their Internet Commerce initiatives."

Michelle Banaugh, Vice President of Marketing Wells Fargo's Electronic Payment Solutions

Digital Services

To ensure a solution that is tailored for *your* company, Digital Services begins with an analysis of the business, to design the implementation. The complete solution includes installation, training, and support. You won't merely "hit the ground running," but "reach the airwaves flying." Each solution is customized as you require, for your online marketing needs.

The custom support package is designed and delivered by Digital's Systems Integration group. It includes a well-defined process and set of deliverables to get your electronic store up and running quickly:

- · Business process definition and assessment
- · Design, implementation, and test of the total system
- Operational and development on-the-job training

A variety of additional options are available to meet your unique needs. If you already have components that meet your needs, this solution lets you continue using them. The virtualStore solution blends with what you have, allowing you to mix-and-match as needed. Talk with your Digital representative or authorized reseller to determine the components that are right for you!

Alliances to bolster your business

Digital unites with key industry players to merge their unique strengths in an integrated solution, tailored to address the needs of YOUR market, customers, and company.

- Digital: Proven, reliable systems and networking hardware. A wealth of experience in implementing solutions for information technology and commerce.
- Microsoft: The leader in easy-to-use systems and application software, with a
 proven commitment to Internet technology.
- Transaction processing providers: Hand-picked for your focused market and commerce requirements.

Digital has a long history of providing Internet-based solutions for a variety of customers. Together with industry-leading Microsoft, this partnership truly understands electronic commerce. The result is more expertise in this exploding new marketplace than any single company can offer. The <code>virtualStore</code> makes it easy for you to implement Internet commerce, in a total solution that is customized for the way you do business.

Digital and Microsoft: Experienced and established business partners. Offering a complete package to get you up and running doing business on the Internet.

Your next steps

If you want your business to take full advantage of electronic commerce, discuss the *virtual*Store solution with your Digital representative or authorized reseller. And let the world buy from you!

Internet Business Solutions

Updated: 11 February 1997

High Availability Internet Security Solution

Unlock the potential of the Internet -- and lock in security

with packaged systems and software for DIGITAL UNIX and Windows NT

What's your biggest worry about connecting your organization to the Internet? Security, right? Worry no more. With brilliant engineering and award-winning technology, DIGITAL has made a quantum leap in delivering simple and worry-free security. Best of all, it's available to you in easy-to-order, pre-tested configurations. And we have full support services to advise and assist you in reaching your Internet business goals.

Only with industrial-strength network security products can the Internet continue to mature as a stable platform for business-critical applications such as

- Telecommuting
- · Electronic commerce
- · Business partner communications

DIGITAL has those products today: next-generation High Availability Internet Security Solutions for DIGITAL UNIX and Windows NT.

Based on our own industry-leading firewall, tunneling, and cluster technologies, these solutions meet the need for inonclad security and – at the same time – are more transparent to the user. In the end, they support cost-effective system management and deliver real benefits for business operations.

Benefits

- Prepackaged and tested hardware and software configurations provide maximum ease of ordering and installation
- Best-in-class AltaVista Firewall and Tunnel technologies provide maximum protection for valuable internal resources while maintaining high levels of external connectivity
 - Cluster technology
 ensures maximum
 uptime and availability
 for continuous
 subscriber and user
 satisfaction
 - A comprehensive portfolio of Internet services provides the help you need to enjoy the maximum business benefits from the Internet
- Hardware components
 are mounted in vertically
 integrated cabinets for
 maximum efficiency
 and ease of
 maintenance

Superior Security

DIGITAL High Availability Internet Security Solutions are the best choice for organizations in need of highly secure Internet connectivity.

DIGITAL can provide one-stop shopping for complete, highly available and flexible firewall solutions that automatically detect intruders, take automatic evasive action, and keep your intranet secure from hackers, crackers, and other potential threats.

At the same time, employees, trusted customers, and partners may securely access your internet using AltaVista Tunnel.

AltaVista Firewall

The award-winning AltaVista Firewall on DIGITAL UNIX or Windows NT provides a flexible and secure connection between your private network and the Internet. *Simple to install*, it prevents unauthorized access to your private network while providing controlled Internet access to users within your network.

Advantage – you! AltaVista Firewall takes an active role in your security management. With its unique intelligence, it warns you of impending danger of intrusions, is constantly looking for threats to your defined security zone, and takes evasive action when "attacks" do occur.

AltaVista Firewall eases your worries with a combination of trusted application gateways, comprehensive logging, reporting, realtime alarms, strong authentication, graphical user interface (GUI), and a step-by-step installation wizard -- all in one software package. Fact is, AltaVista is by far the fastest firewall available with no compromise on security.

Industry recognition for AltaVista Firewall 97

We're not the only ones who think AltaVista Firewall is good. The Computer Reseller News Test Center gave its Editors' Choice award to AltaVista Firewall 97.

Find out more by visiting: http://www.techweb.com/se/directlink,cgi?CRN19970505S0144

AltaVista Firewall Highlights

- Logs every break-in attempt
- Triggers alarms when attempted break-ins or other possible security breaches occur
- Takes automatic evasive action against suspected intruders with no human intervention
- Allows for selective blocking of what comes in from, and goes out to, the Internet
- Allows only selected individuals outside the intranet to come in with end-to-end authentication and encryption capabilities
- Detects any attempts to tamper with information packets moving in and out

Virtual Private Network

AltaVista Firewall software can be used with the AltaVista Tunnel product to create a virtual private network or VPN. A VPN is a private network that uses the Internet to transmit information between company Internet Protocol networks. VPNs encrypt data streams between two or more points in the network. This creates private "tunnels" which safeguard all data sent between those points. VPNs are an appropriate choice if you want secure internetworking with mobile workers, between remote offices, or among business partners.

AltaVista Tunnel

As the Internet matures, companies, governments, and organizations are seeking ways to use it as a secure, cost-effective alternative or extension to costly private telecommunications networks. With AltaVista Tunnel authentication and encryption technologies on DIGITAL UNIX or Windows NT, you can use the public Internet as your virtual private network -- when and where you need it -- significantly reducing network operations and management costs.

The AltaVista Tunnel supports direct tunnels from remote and mobile PCs. AltaVista Tunnel Personal Edition client software runs on a PC under Windows 95 or Windows NT, and links over the Internet to an AltaVista Tunnel Workgroup server.

Build up, not out

Vertically integrated industry-standard cabinet configurations pack more compute power and storage capacity per square foot of floor space than conventional models, with no special environmental requirements.

But it's the configuration flexibility that can really make a difference in meeting your high availability Internet security needs. Using asmple building-block approach, you can configure the optimum system to meet your goals with both DIGITAL and third-party components.

At the same time, there's built-in flexibility to upgrade configurations as needs change.

Leadership Cluster Technology

Since pioneering the concept in the early 1980s, DIGITAL has enabled its customers to install over 75,000 clusters containing over 400,000 systems. Our custom to long-term acceptance proves the effectiveness of a well-imp

A cluster is a closely linked group of computers that provides fast, uninterrupted computing service. This close cooperation among systems can *improve performance*, *minimize* downtime, and greatly simplify management.

Clustering significantly reduces downtime due to hardware and software failures. It's the next best thing to fault-tolerant computing but without the cost and complexity penalties. It provides multi-host access to SCSI disks and a generic failover mechanism for disks and applications. In High Availability Internet Security Solutions, firewall and tunnel services become highly available because they have been implemented and installed to make use of this failover mechanism.

TruCluster Available Server Software for DIGITAL UNIX

The TruCluster Available Server makes mission-critical computing a reality by keeping applications and network services running even when systems or components fail. The TruCluster Available Server delivers the advantages of fault resilience as well as providing multihost access to shared disks. And the remarkable failover mechanism makes applications and data highly available.

DIGITAL Clusters for Windows NT

As with TruCluster software, networked Windows NT systems running Windows NT Server and NT Clusters appear as a single system to the end user. Connected via SCSI adapters to a shared SCSI bus, clustered systems can be addressed and managed as a single, secure entity. Additional components such as I/O and storage capacity can be added easily.

High Availability Internet Security Solutions:

"When GE does something, businesses everywhere pay attention. And GE is doing Internet electronic commerce in a big way."

- The Economist, May 1997

"GE Information Services has jumped ahead of such companies as IBM, Microsoft and Netscape to lead the race into business-to-busines s Internet commerce."

- FORBES, March 1997

Internet / Intranet / Extranet Services

Internet Consulting

GE's Internet Consulting and Services experts work with clients to define, develop and implement Internet strategies and solutions. These consultants examine goals and objectives as well as plans, capabilities and expectations to create and recommend appropriate solutions, technologies, and process changes to meet those objectives.

ECXpert

ECXpert is an innovative and advanced electronic commerce messaging system for business-to-business electronic commerce over the Internet. This comprehensive software solution addresses the electronic business communications and application challenges companies face so they can control costs and expand the electronic trading community.

SellerXpert

SellerXpert allows corporations to establish an online selling presence for their corporate clients. It helps corporations not only increase top line revenue, but lower operating costs and improve customer service. SellerXpert is a full-featured product including comprehensive order management, seller and buyer maintained membership, flexible payment options, next-generation electronic product catalog, full data transformation and EDI capability.

GE Trading Process Network (www.tpn.geis.com)

GE TPN is a portfolio of easy-to-use, Web-based solutions designed to increase purchasing productivity. Using the latest in secure Internet technologies, GE TPN brings buyers and sellers together to conduct business electronically with less cost, more speed and greater efficiency than ever before.

TPNPost

TPNPost streamlines the RFQ preparation, distribution, negotiation and award process to ensure getting the best price on goods and improve productivity. TPNPost allows buyers to solicit request for quotes from an unlimited number of global, pre-qualified suppliers, distribute product information and specifications to them swiftly and manage bids and supplier communications efficiently and cost effectively.

TPNMart

TPNMart is a total electronic catalog, requisitioning and ordering solution that improves significantly Indirect/MRO sourcing/productivity. TPNMart allows users to order company-approved products with ease, automatically route orders for approval, and create and send purchase orders to suppliers electronically.

GE TradeWeb (www.getradeweb.com)

Form-based EDI on the Web service that allows Web users to trade business documents quickly, easily, securely and cost-effectively over the Internet. GE TradeWeb eliminates the need for complicated EDI mapping and translation services while allowing the Web community to exchange electronic messages with their trading partners.

GE InterBusiness Partner

GE's InterBusiness Partner enables businesses to conduct secure business transactions over the Internet. This suite of solutions overcomes the limitations of the Internet and paves the way for business-to-business electronic commerce over the Internet.

GE InterBusiness Provider

GE's InterBusiness Provider enables service providers to sell Internet-based communications solutions that offer customers a secure, feature-rich environment for a private Internet domain. With GE InterBusiness Provider, service providers gain access to leading-edge technology and focus more on expansion.

Enterprise

GE's Enterprise System provides a single communications interface for the exchange of e-mail, EDI and binary data such as CAD/CAM documents and spreadsheets. The Enterprise System is an information management and control center that acts as a "front-end" to legacy applications to leverage technology investments.

- Trinity GE's Market Risk Solution
- o RXM Global risk and exposure management system for banks.

Risk Exposure Management System (RXM)

The Risk and Exposure Management System (RXMSM) is a global risk and exposure management system for banks. With RXM, a bank is able to calculate its worldwide exposure and risk in real-time, react immediately to market changes, and improve speed of service to customers.

Flexible in design, RXM can be applied in a wide variety of exposure management environments to provide banks with a global solution that optimizes risk and maximizes profits. RXM is also integrated with the *Trinity* trading and risk management software to provide global credit and market risk in one solution.

Features

RXM provides bank managers and dealers with a powerful combination of capabilities for monitoring and managing exposures including:

- · A comprehensive structure of credit limits
- Extensive graphically-based reporting capabilities
- Support for a wide range of banking products
- Configurable contract data entry and risk calculation processes to suit specific requirements, operating policies and regulatory requirements
- Comprehensive database of trading positions that can be integrated with existing front-office dealing systems

Benefits

RXM can offer considerable benefits to the profitability and competitiveness of a bank's business by providing real time control over a bank's global exposures and:

- Creates the environment for the bank management to implement a risk awareness policy
- Increases profitability by focusing trading activity on the most profitable areas across markets
- Allows for rapid reaction when major banking crises occur, for example the collapse of a counter party
- Manages risks within the bank's policies and regulatory requirements even with high volume trading and numerous trading locations
- Allows dealers to trade within boundaries that are set by a global view of a client

For more information, send e-mail request to: Risk.Solutions@geis.ge.com or call (001) 301-340-4665.

Automated Order Taking 24 hours a day via the Internet

AN INTERNET BRANCH OFFICE IN AN HOUR

TrustedLink INP comes complete with all the pieces you need to set up shop on the Internet. A combination of Web site creation software, Web hosting services and Internet access will have you live and taking orders in less than an hour. There is no programming required. TrustedLink INP leads you through a series of basic questions about your business that are used to construct your Web site, TrustedLink INP creates professional looking Web sites that are customized to your desired style and content. With a click of a button, your site is instantly published live on the Web and your ordering system using the WebPO service is immediately activated. TrustedLink INP will even register your Web site in the major Internet directories so that customers can easily locate your site.

YOUR WEB SITE CAN TAKE ORDERS 24 HOURS A DAY, 7 DAYS A WEEK UNATTENDED

Whether you are an office supply store or a manufacturer of piping products, your business will quickly benefit from an online order

"The perfect editor for small and mid-sized businesses just starting on the web"

TrustedLink INP guides the creation of your Web site.

entry system. Think of TrustedLink INP as a salesman that never sleeps, never needs a day off and always ready to write an order. Your customers can repeatedly place orders for your products or services without ever placing a phone call to your company. The WebPO ordering system, guides your customer through a catalog of your products then requests shipping information and finally generates a complete purchase order. That order is sent electronically to your PC where it can be handled by your sales and accounting systems.

You can preview your Web site while you build it.

STREAMLINE YOUR ORDER TAKING PROCESS

Merchant Manager™

- Merchant Manager is a total online business management and payment capture system developed by Accesspoint Corporation. Merchant Manager's advanced methods of implementing electronic commerce on the Internet combine the strengths of many different software solutions into one powerful, integrated online environment. In a word, Merchant Manager puts you in control of the most affordable and powerful suite of on-line business management tools available today.
- 2. Merchant Manager's main interface provides easy access to all of the system's online tools. Once you log on to your account, you can use your keyboard to fill-in data fields, select style sheets, create web pages, change prices, manually enter credit card sales, control inventory, keep track of shipping costs, monitor your site's traffic, track sales and handle many other functions. Total business management with absolutely no programming or HTML knowledge needed.
- 3. Your customers see your web pages and products displayed automatically -- 24 hours per day -- with all of the color, pictures, pricing and descriptions necessary to motivate online shopping. Customers find a seamless self-service environment where it is easy to ask questions, find answers, and make decisions. The simple click of a mouse is all it takes for shoppers to automatically add products to your secure order forms and pay by credit card or select from many other payment forms. Unlike hard-coded websites, your products and pricing are presented dynamically and are secure from price tampering and would be hackers.
- 4. Merchant Manager collects all of your customer's order information inside a secure transaction template on a secure server. Credit card transactions can be handled in real-time or forwarded to you for manual entry. Future releases of Merchant Manager will also support on-line checks and ATM withdrawals.
- 5. For realtime transactions, Merchant Manager automatically submits your customer's information to your card processor for authorization. A reply is returned within seconds. An approval will cause Merchant Manager to instantly deduct items sold from your inventory and send you an order confirmation with all the details of the sale except the credit card number and expiration date. Merchant Manager also sends a receipt to the customer on your behalf. The return receipt can be customized to include any message, including a convenient order tracking link.
- If the credit card is denied by the card processor, the customer receives a notice onscreen that the credit card was not accepted. The customer can then re-neter another credit card or correct the name and/or address of the cardholder. There is no charge to you or your customers for denials.
- Merchant Manager also handles account and purchase order sales. This feature makes it easy for your business and corporate clients to easily find the goods or services that they need and complete their purchases without the inconvenience of using credit cards.
- 8. Complete transaction reports including credit card numbers and expiration dates are provided in a password protected secure directory. These reports are produced daily and are HTML files. They are available for your review online, are also downloadable into popular accounting packages such as quickbooks, and contain each transaction and daily totals.
- Merchant Manager performs an automatic settlement each evening whereby all the transactions for the day are tallied and funds are transferred by the processor into the your checking account within 48 to 72 hours, depending on banking and card service terms.
- You are also provided with a password protected data entry screen for manual entry of orders that you
 receive by mail/phone/fax or in person.
- 11. Site statistics are provided for real time analysis of site usage. You can see who is online right now and track their movement through your website. This helps you see which pages receive the most traffic so you can arrange your product display more effectively. Colorful graphs show you how many visitors come to your site from search engines, reciprocal links or paid banner advertising. Merchant Manager help you monitor the effectiveness of your advertising dollar.

1 of 1

MAKE-A-STORE Your E-Commerce Solution Provider

"...the ability to communicate about the program details online is facilitated by flexible and intelligent programmers. ...the ability to customize page designs to reflect the singular image of your business is available. ... Customers will find the shopping process logical & easy-to-follow thereby increasing the possibility of sales. "

-- Bonnie Arons, Bilingual Books

Simply put, Make-a-Store's software enables you to create a virtual online sales catalog of your products or services. Customers can then order your products/services directly from your online catalog. We have storefronts for both the small business owner and large business owner. But we don't just stop there...We can also provide internet auction front ends to a real-time database back-end. And more. You name it. If it involves databases and the Internet, we can deliver!

WHY CHOOSE US?

So what makes us different from our competitors? In a word, service. We do all setup. configuration, customization, and installation of our software. You never have to touch any code! We will tailor fit each screen to your exact specifications. What's more, our software is the most feature packed available on the web. Our E-Commerce software is the simplest to use for both you and your customers. It is easy enough for the computer illiterate and robust enough for the true web wizard!

SMALL STORE SOLUTIONS

We offer an extremely powerful and affordable packaged storefront for the small/medium sized business owner in two different versions - a database version and a non-database version. Our database version comes with the Make-a-Store Database Manager which securely allows you edit, add, and delete inventory right from a web page. Your inventory is stored in a gdbm

database which automatically and dynamically creates your catalog's web pages!

Our non-database version allows you to have total control of the design of your storefront. Rather than having a database dynamically create the HTML for your catalog, you write the HTML (we can provide templates if needed). It comes with our Make-a-Link software which creates a special, encrypted link for each product. This link will "talk" to our Make-a-Store software. And using Make-a-Link is a snapl You simply enter the product name, stock number, price, weight, etc. Just push a button and you will be prompted with the special link. You then just copy and paste the special link right into your web page.

Unlike other Electronic Commerce packages, **no** programming experience and **no** third party software is needed to use and maintain our program. All you need is your connection to the intermet!

The majority of this website is devoted to our small/medium store solutions. So please <u>continue</u> to the product overview for more information.

LARGE STORE SOLUTIONS

Teaming with REI Systems, Inc© (inventors and developers of the widely publicized Electronic Handbookstm currently being used at NASA), we can utilize the most up-to-date technologies in Internet information systems. We can provide 100% customized storefronts/auction-fronts with a back-end Oracle® database on blazingly fast Silicon Graphics® workstation - all tied together on a secure (SSL) server. These software packages are capable of quickly storing/searching thousands of items. All completely customized to your exact specifications. Using REI Systems' "roll based security," you could not receive a more secure site. These large scale applications go beyond just the storefront. For example, with our analysis tools a push of a button will generate graphs to give you sale trends. And a push of a button will generate pre-formatted fax letters for you to send to your supplier indicating what you sold that day, that week, etc. A push of the button will generate mailing labels for your distributors. You get the picture. This is purely an "end to end" system. You name it, we'll develop it.

If you are interested in a large scale application, please contact Neal Kaiser at neal@make-a-store.com.

Isn't it about time you opened up shop on the Internet?

MiniVend is a

full-featured electronic catalog system (commonly known as a shopping cart) that can be set up with multiple catalogs and as a Mall. It provides an interface complete with SSL security and database support.

What's New?

MiniVend 3.06 released.

Click here for details.

MiniVend is freely-redistributable under the GNU General Public License. It runs on Unix and 32-bit Windows -- Mac support is not available.

MiniVend 3.06 is the current version. Its features and power rival the costliest commercial systems.

If you want to see what it can do, check out some sites that use MiniVend.

If you're ready, but your ISP won't host MiniVend, here are some ISPs that will.

Subscribe to the MiniVend mail list, or view the archive.

Patches against the current version of MiniVend.

Try a new FAO style that you can add answers to.

MiniVend Features

- · Users maintain a "shopping cart" for ordered items
- Multiple independent or shared catalogs allow one server to run many storefronts or a "mall"
- Complete SQL database support, inluding ODBC, via the powerful Perl DBI/DBD interface
- SSL support means secure and practical credit card ordering

- · PGP support for secure off-site mailing of orders
- · Built in support for CyberCash
- Catalogs can be of almost unlimited size with excellent performance
- Multi-server mode for very high capacity on systems with sufficient memory
- Cookie support allows browsers to leave catalog and come back without losing session state -- browsers that don't accept cookies will still work fine
- Multiple shopping carts allow buy-sell operations or classified add exchanges
- Built-in addressable database support with virtually unlimited rows and columns and field sizes-- no SQL is required to run Minivend
- · Many, many, other features

Powerful search capability

- Fast binary search
- One-click scan and search -- build a whole search in a single HREF
- Complete Glimpse interface
- Range searching, numeric and alphanumeric
- Embed searches within searches
- · Independent field search selection and return
- · Search any file, build results from any database

Complete control of appearance

- Over 80 predefined tag functions
- Powerful user-definable tags
- Catalog pages automatically selected -- either built "o the fly" from the database or pre-made for popular items
- Embedded Perl and conditional HTML allow comple and flexible catalog pages to be completely built from the database
- · Full frames support
- Full client-side imagemap support, including frame targets and form submits

Flexible Ordering Process

- Multi-level order screens with configurable field verification
- Shipping calculation, mixed modes, with UPS table lookup

- Sales tax calculation, with fully independent non-taxable item and taxed shipping
- Fully-configurable discounts with coupons or across-the-board discounts
- Fully-configurable quantity pricing
- · Back end order entry capability, including mSQL
- Fully configurable order reports

Easy Administration

- · Automated installation and configuration
- · Numerous administration utilities
- Runs under Perl 5.003+ and almost any UNIX
- Works well with all browsers

For Website questions and comments... Last Update: 07 September 1997

The Solution for Online Commerce!

CyberCash's "Secure Credit Card Service" and NetLink's "Virtual Shopping Cart"

CyberCash

CyberCash enables electronic commerce by providing a safe and convenient Internet payment service. The consumer uses virtually any browser to shop on the World Wide Web. The CyberCash Secure Internet Payment Service facilitates the purchase of goods and services by using major credit cards. This is accomplished through CyberCash's instantaneous secure communications between consumers, merchants and the bank's processor.

The <u>CyberCash</u> transaction process utilizes software that is provided FREE to the merchant and the consumer.

NetLink's "Virtual Shopping Cart" ...

NetLink's Virtual Shopping Cart allows the consumer to purchase items by putting them into a virtual shopping cart, which will automatically create an invoice. Once the the consumer has completed selecting items, the Virtual Shopping Cart checkout stand automatically adds applicable sales tax and shipping fees.

The NetLink system then displays the invoice and requests a payment method. The consumer is then given the option to launch the CyberCash Wallet. If they do not already have the CyberCash Wallet software, it can be downloaded for FREE in a matter of seconds.

After the consumer chooses a credit card for payment, the rest is a series of encrypted automatic messages that travel between the parties and the credit card networks. NetLink is a CyberCash VIP business partner.

Please demo the Virtual Shopping Cart at the following storefronts:

NetCart WWW.NETCART.COM

Welcome to NetCart™, the next generation of on-line web shopping systems

The NetCart™ catalog system links to an existing or new web site. Simply upload pictures of your products and use a standard web browser to add, update, and delete product items and categories. You can choose 'specials', mark a product *NEW*, even change the entire look and feel of your catalog at the click of a button! All NetCart™ sites reside on T1+ bandwith, allow up to 1500 items & categories, and include all updates and improvements throughout the year at no extra charge. Thousands of people visit NetCart™ powered sites each day. Why not make your site one of them?

Download the latest NetCart™ Screencam demo. This demo will run without the need for a browser or Internet connection. For optimum performance a Pentium class machine running Windows 95 is recommended.

How OrderEasy Works

Now your existing Web site can have secure Internet transactions without changing Web servers.

OrderEasy allows you to host your Web pages anywhere on the Internet. Simply add "Buy Now" buttons to securely commerce-enable your Web site and you'll be taking real-time transactions over the Internet in hours.

For security, OrderEasy uses the Netscape Secure Socket Layer (SSL) protocol, which all standard Web browsers support, and the CyberCash secure Internet payment server. This ensures that the transaction between the consumer's browser and the OrderEasy transaction system is totally secure. The OrderEasy server is locked down; the only open channel of communication into the server is through an SSL connection. Further, the customer credit card information is not archived on the server; it exists only long enough to clear the customer transaction. Optionally,

The secure back-end electronic commerce service allows online consumers to easily buy from your web site.

OrderEasy gives your Web site total security

the consumer can use a CyberCash Wallet for credit card payments. The CyberCash transaction server utilizes 1024 bit RSA and 56 bit DES encryption, the most powerful Internet encryption technology available. The OrderEasy system is fully registered and certified with VeriSign digital identification.

WELCOME TO THE PCORDER HOMEPAGE
REVOLUTIONIZING THE WAY COMPUTER PRODUCTS ARE BOUGHT AND SOLD

BCorder

Revolutionizing the Way Computer Products are Bought and Sold™

Join the 10,000 computer sales representatives, procurement officers and corporate customers who utilize the pcOrderTM platform to shop for computer systems and components, access enhanced product information and place orders online. By partnering with major computer manufacturers, distributors and resellers, pcOrder has developed and deployed an independent electronic commerce system for use by the entire computer industry.

Industry leaders are already utilizing the pcOrder Electronic Commerce Platform to change the way they buy and sell computer products.

Manufacturers:

- Enhance presence at the
 - point-of-sale
 - Facilitate move to build-to-order
 - Streamline sales and ordering process

Resellers:

- Increase sales reps' productivity
- Drive revenue
- Extend electronic
- commerce to customers

Distributor

- Implement build-to-order
 - initiatives
 - Reduce cost of
 - sales/ordering
- Short time-to-benefit for electronic commerce

Customers

- · Shop online for computer
- products
- Access enhanced product
- information
- Place orders online

Speedware OrderPoint

Making Internet Commerce a reality

Speedware OrderPoint is a complete solution for businesses to web-enable their sales order channel. This ordering channel enables customers to check product information (including pricing and availability), place orders (including shipping and payment options) and track orders through to delivery.

Speedware OrderPoint's strength lies in the ease of Implementation and ongoing maintenance, without sacrificing functionality. The business people responsible for the channel can implement and manage it quickly and easily.

MOLIDING SPEEDWARE OrderPoint

MOLDING SPEEDWARE OrderPoint TO SUIT YOUR COMPANY

Speedware OrderPoint was designed to be logical and efficient, yet flexible. Many commerce projects never make it to the Web because they are either too complex to deploy, or do not meet company requirements. Most applications still need customizing to make them suit a company's culture. Speedware OrderPoint was built with this in mind, giving you choices about how you want to run your business. The result is an Order Desk that your customers will find intuitive and productive, and an Order Manager that will allow you to easily manage this channel.

ORDER DESK

Satisfied Customers Mean A Successful Company

It sounds simple: Keep your customers happy and you will profit. Yet, as the changing business environment becomes increasingly competitive, it becomes more challenging to know your customers individually and exceed their service expectations.

Improve customer service

The Internet is revolutionizing customer service. Established customers can feel more in

Speedware OrderPoint

control by having access to product and pricing information when they need it.

Speedware OrderPoint allows customers to find the products they need using intelligent searching mechanisms. Complete product information, including pricing and availability, help them make their purchasing decisions immediately, without having to wait for their representative's callback.

Ordering is simple. The customer can review the order, check for errors, and select the shipping and payment options which best reflect their needs. Complementary items attached to the selected products maximize cross-selling opportunities. Products can be configured and priced online. At the end of the order the customer has a full quotation including discounts, taxes, shipping charges and the latest pricing. They will receive e-mail notification for order and shipping acknowledgments, as well as incomplete orders.

Know your customers individually

Speedware OrderPoint recognizes customers by their name and password combination. This is especially important in a closed business-to-business environment where you might want to restrict access to existing customers. It maintains a detailed customer record, complete with shipping and billing addresses and appropriate discounts.

If you negotiate individual pricing with each of your customers, this can be reflected in OrderPoint to further personalize the service provided to your customer.

Order Tracking

Customer service becomes even more pronounced after the sale. At their convenience, customers can access shipping information and order status. They are notified of product shipment by e-mail.

Sales professionals are customers too

Sales people benefit even if you decide to take a more moderate approach to Internet commerce and open it up to their exclusive use. With just an Internet connection, a sales person could place the order at the customer site, in a hotel or at home, any time of day.

ORDER MANAGER

Customers only see a fraction of the electronic commerce application. This must convey a positive image of your company. What they do not see is the complex structure that supports their order. This too must also portray efficiency and organization.

Administration

Through secured access to the Administration section, managers of your Internet channel can make decisions about the overall operation and look of Speedware OrderPoint. Included in this section is access to many preconfigured color/style templates, and the ability to create an unlimited number of your own.

WSA Credit Card Online Authorization

Introducing VisualCASH 2.0 for Windows. For as little as \$299, you are now able to accept 'plastic money' as secure and easy as CASH. VisualCASH is a powerful credit/debit authorization and settlement management software that offers you many great advantages and conveniences. All you need to do is to authorize and deposit without even leaving your desk, and VisualCASH will handle the rest for you. No more exhausted hours processing paper slips, doing calculations, making deposits and adjustments, and returning declined credits and cheques. No more lost product and service revenue due to ineffective payment enforcement. And no more inconveniences for your customers such as 'signature on bank slip', 'fax backs', 'CODs,' and 'certified cheque or money order only'. VisualCASH makes collecting credit/debit payment so easy that you may now operate your business cost effectively, effortlessly, and with total customer satisfaction.

New! VisualCASH Pro 2.0 for professionals. Included are features in the VisualCASH standard edition, the VisualCASH network edition, plus VisualCASH <u>DDE</u>, <u>OLE Automation (EXE and DLL)</u> and <u>Network File</u> servers! Now integrating credit/debit authorization into your application is as easy as sending one line of message to VisualCASH server as in the following examples:

Authorize@Purchase@4003010123456780@\$499.00@9808@... to authorize it!

or Store@Purchase@4003010123456780@\$299.00@9808@... to batch it!

And VisualCASH will pass back the authorization information, including formatted merchant and customer receipts to your application. Enable your Web Server for live credit card authorization? Or add VisualCASH to your Microsoft Office applications!

Click here to Wiz-Tec's new Web Site.

Click here for more information.

☐ New 32 bit VisualCASH 2.0 - Lite. Click here to download the working evaluation version. The evaluation copy is capable of processing live VISA/MC and do bank deposit, and there is no time bomb. Click here to start download.

WwSHOP™, full version (one database)

This robust online transaction-processing system provides an integrated solution for automatic credit card processing through standard banking interfaces that are readily available today. When used with WwBASETM, it gives webmasters, site designers, and even nontechnical marketing staff the ability to easily manage complete online shopping malls where products can be accumulated in a user shopping cart and then "checked out" and paid for within minutes using all major credit cards. Supports both manual and automatic transaction processing models, including ICVERIFYTM, CardSoft PCTM, and CyberCashTM.

Duo Offers E-Commerce Applications

August 18, 1997 Joy Russell

A newly formed company led by Intel and SAP America Inc., Philadelphia. promises to produce bundled electronic commerce applications on PC-based servers.

Pandesic LLC (Limited-Liability Corp.), Sunnyvale, Calif., will develop Internet commerce packages for the consumer-to-business and business-to-business markets. Intel and SAP officials stated earlier this month.

The new company plans to introduce the Pandesic ElectronicBusiness Solution next month. It is a bundled E-commerce package featuring hardware, software and services designed to bring E-commerce capabilities to smaller businesses that don't have the resources to create Internet-enabled business applications.

"Merchants looking to do business over the Internet can now do it fast and easy, and Pandesic contains all of the functionality and features necessary to run and manage a Web-based business," said Paul Wahl, CEO of SAP America.

The product contains the financial, shipping and general ledger aspects of conducting commerce over the Internet, he said.

Rather than require customers to make a capital investment, pricing will be based on a pay-per-use method. Pandesic will charge a percentage for each transaction, which can range from 1 percent to 6 percent. "Up-front costs to tailor applications can be two to three times more than the cost of this turnkey solution," said Arthur Mesher, research director at The Gartner Group in Stamford, Conn.

"Another advantage of the turnkey nature of this product offering is that a customer can get the hardware, software, support and services from a single point of delivery," Mesher said.

Harold Hughes, Intel's vice president and director of planning and logistics, will become chairman of Pandesic, Bryan Plug, executive vice president of SAP America, will become president and CEO. Pandesic will initially staff approximately 50 employees from Intel and SAP.

pecos product family

The PECOS family of electronic commerce software solutions provides a realtime link between buyer and seller throughout product presentation, selection, ordering, fulfillment, and delivery. PECOS products move your paper-based commerce to online transactions which leverage Internet, World Wide Web, and CD-ROM technology for maximum convenience.

Full-circle electronic commerce is the ultimate application of Elcom Systems' technology to meet the needs of business-to-business marketers throughout the transaction cycle. Unlike other technologies, the PECOS family offers the complete solution, from comparing and selecting products, to realtime ordering and stock status checking, through delivery - all from any Windows-based PC.

Via LAN, WAN, telco, Internet/World Wide Web, and intranets, PECOS products automate the purchasing process, enabling licensees to decrease costs and reduce errors. From food service distribution or ventilation equipment manufacturer to PC and office product resellers, Elcom's business customers use a variety of multimedia formats, including video and sound, to market their product information.

Standard PECOS security features include ESI encryption, ESI registration and authentication, and ESI IPS (Individualized Packet Security). With the optional incorporation of advanced RSA cryptographic technology, companies who use PECOS can realize the cost savings and convenience of doing business via communications that are fully secure and remain private.

PECOS.net

PECOS.net is Elcom Systems' framework for creating electronic commerce applications. It provides core functionality to ensure that Elcom solutions are flexible, scalable and secure.

Catalog Template Server

The PECOS.net Catalog Template Server delivers information to the Web browser when an Internet client browses and/or orders items from an electronic catalog. Information is delivered to the browser by dynamically merging PECOS.net html Templates with a customer's electronic catalog data.

Security

The PECOS.net Catalog Template Servers provide security by running behind a customer's chosen firewall and interfacing with a customer's chosen Web servers. The PECOS.net Catalog Template Server is designed to run either on the same physical machine with a Web server or on a separate physical machine. This design allows the PECOS.net Catalog Template Server to scale to the required transactional service levels.

PECOS.net HTML Templates

PECOS.net html Templates are designed to leverage available Web browser technology and authoring tools. Customers design their client interface with the best current tools and then add PECOS.net html Template extensions to create PECOS.net html Templates. The PECOS.net Catalog Template Server interprets the PECOS.net html Template extensions and dynamically merges data from one or more PECOS.net modules for presentation to the Web client.

PECOS.net Modules

PECOS.net Modules provide a reliable and efficient mechanism to implement business rules and extract catalog or other data for presentation to Web clients. These modules provide the glue between a request sent by a Web client and the presentation returned. They also manage the interaction between the PECOS.net Catalog Template Server and the Transaction Server System (TSS). PECOS.net modules are a proven and efficient technology to implement business logic in today's PECOS.net product line.

Transaction Server System

Transaction Server System (TSS) is a sophisticated Unix or NT based system that handles multiple tasks simultaneously, in a fully scaleable client/server methodology. The TSS resides between the end-user customer's PCs on the client side and the enterprise systems of your company, operating in either interactive or batch mode. It captures all transactions such as orders and inquiries from customers

Rtran

RTran or Remote Transaction service provides the connection-the network presence-between transaction clients on the end-user PC(s) and the transaction servers within the TSS. Subordinate RTran modules handle low-level communications via serial modem, intranet, extranet or the Internet.

Security

Security of all Transaction Server Interfaces is provided by Elcom Systems encryption; customer registration/authentication; Elcom Systems IPS (Individualized Packet Security); and a firewall proxy. RSA encryption is an option.

TSS Administration

TSS Administration is handled by the Server Manager, a Windows program that uses the Name Server to access and display the currently running servers and permits stopping, starting, and investigation of each one.

Development Tools

The Server Development Tools include the Code Generator, a Unix or NT development environment that facilitates the creation of servers from a server description file. When executed, the Code Generator uses simple commands to create server code modules that are the starting point for

PECOS Commerce Manage

Full-Circle Electronic Commerce for Online Sellina

Extend Market Reach and Improve Profit Margins with PECOS Commerce Manager

PECOS Commerce Manager™ (PECOS.cm) is an electronic commerce application that provides manufacturers, distributors and direct marketers with access to an exciting new selling channel. Designed to support a variety of deployments including extranets and the Internet, PECOS.cm enables merchants to extend their market reach. provide value-added services to customers and improve their bottom line margins.

When merchants implement PECOS.cm, their customers gain easy access to the most current offerings and latest pricing through online multimedia electronic catalogs. The powerful search capability of PECOS.cm saves time and money by providing real-time product availability information and automated order placement.

With PECOS.cm, merchants can provide enhanced service at a lower cost. Companies can respond immediately to product inquiries and accept orders 24 hours a day, seven days a week. By accepting electronic orders, merchants reduce their order processing costs. And merchants and customers alike benefit from more efficient and accurate order fulfillment.

PECOS.cm provides a competitive edge for companies in a wide variety of industries, from PC products to office supplies to home consumables. With PECOS.cm you can add value to customer relationships, and create a link to the future for you andyour customers.

PECOS.cm provides secure transaction processing and supports industry standards including common Internet browsers, Java, and traditional Windows deployments. Sophisticated system management capabilities allow merchants to configure the system to meet specific customer needs including account-specific pricing, limits on access to specific catalog items, and support for a variety of traditional and electronic payment

TAKEVISAMC

Do you take credit cards?

Now every business can take credit cards from their customers!

This is why we already have thousands of satisfied clients with thriving businesses:

- You DO NOT sign a 48 month lease. You RENT a terminal month-to-month for only \$34 per month (or if you want to conduct electronic commerce over the Internet, we rent the software for only \$29 a month). The reason we RENT: If you decide you don't want to continue in your new business or some other opportunity arises, you are not locked in for the remainder of a long term contract.
- There is no \$600-\$800 out-of-pocket expense for something you don't even know will pay for itself.
- Refundable \$75 application fee....which means.....that if we are not successful
 in opening an account for you for some reason, your application fee is
 completely refunded.

More reasons why our customers are so satisfied:

- IT'S REALLY FAST....you get approved in a matter of days!!!
- Before you put a penny out of your pocket, we tell you if you can get approved or not.
- Then we guarantee your approval, even if you are a home-based, Internet or mail order business.
- We also unconditionally guarantee all of our equipment.
- You only need to fill out a basic three page form.
- We walk your application through the bank processing.
- We REALLY want to get you a merchant account.
- Our phone (toll free) is always answered by a person, not an answering machine..CHECK US OUT.....800-836-8486!

Summary of fees:

- \$75 application fee. Everyone else charges \$150-\$350.
- \$34 monthly rental fee (\$68 required up-front for first/last month's rent), or only \$29 per month for the software to conduct electronic commerce over the net. (\$58 up-front)
- · \$10 customer statement fee per month.
- \$.20 for each card swiped; \$.30 for each non-swipe transaction.
- 1.79% fee per swipe transaction and 2.5% fee per non-swipe transaction charged by bank each month.

CHECK US OUT!

Call around to our competitors. Call a few banks: NO ONE, BUT NO ONE has a service that can compare to this!!

NETSCAPE APPLICATION SERVER

The industry-leading Internet application server, Netscape Application Server 2.0 enables corporations to develop, deploy, and manage business-critical applications. The Application Server solution includes Netscape Application Builder 2.0 and Netscape Extension Builder 2.0 to ensure high availability and easy integration with existing enterprise systems.

With the acquisition of KIVA Software Corporation, Netscape became a leading provider of application server software for enterprise-class intranet, extranet, and Internet applications. Netscape now offers Application Server, Application Builder, and Extension Builder to Netscape customers developing and deploying business-critical applications that reach beyond the company to include partners, customers, and suppliers.

Application Server provides significant new features and unprecedented functionality for corporations implementing business-critical Internet and extranet applications where high performance, rapid development, scalability, uncompromised availability, and enterprise integration are critical to achieving their business objectives.

NETSCAPE SUITESPOT 3.5

WHAT'S NEW

Netscape SuiteSpot, the leading open platform for networked enterprises, is now available with new features to help you more effectively manage information, communicate and collaborate, and automate business operations with a secure administration infrastructure.

With the release of SuiteSpot 3.5, Netscape is making it easier to deploy and manage large-scale, business-critical intranets and extranets using the leading open platform for the networked enterprise. The table below outlines some key features in this new release, along with their technology benefits and results for your business.

Technology Benefit

Business Result

INTEGRATED HIGH-PERFORMANCE DIRECTORY

- Single directory manages all SuiteSpot components as well as any other application
- · Native LDAP version 3 support provides standards leadership
- · Enhanced performance and scalability
- Intelligent referrals
- Distributed replication

- · Lower total cost of ownership relative to competitive, stovepipe solutions
- · Ability to create and manage large intranets centrally and cost-effectively
- · Secure, manageable extranets for customers. partners, and suppliers

PC Magazine Online raves about SuiteSpot 3.5, saying it has "improved if not perfect centralized user administration." Read the full story.

NETSCAPE COMMERCEXPERT PRODUCT FAMILY

Electronic commerce over the Internet is booming. Companies that made an early commitment to Internet commerce expect to sell \$8 billion in goods and services this year, and this is only the beginning. By the year 2002, electronic commerce over the Internet is expected to grow 40 fold to \$327 billion, according to Forrester Research. Netscape is doing its part to advance Internet commerce by offering complete solutions for business-to-business electronic commerce.

NETSCAPE COMMERCEXPERT SOLUTIONS

A Complete Family of Business-to-Business and Business-to-Consumer Products

The Netscape CommerceXpert product family of electronic commerce solutions was developed by Actra, a joint venture funded by Netscape and GE Information Services (GEIS). The commerce solutions outlined below are based on the same open protocols and scalable security architecture used for communications on the Internet. Any company with Internet access can easily become a trading partner and enjoy the enhanced security features provided by Netscape's electronic commerce solutions. Moreover, Netscape's electronic commerce products can interoperate with EDI networks and private value-added networks (VANs) so even companies with proprietary systems can take advantage of online commerce.

- Netscape ECXpert. As the foundation of Netscape's commerce product line, ECXpert delivers EDI for the Internet. For more information about this product, please refer to the following:

Products Enterprise Applications

Take advantage of this Internet corporate purchasing solution for employee self-service ordering based on corporate agreements.

Organizations spend hundreds of millions of dollars each year on the goods and services needed to operate their businesses. To manage and control these purchases, many organizations rely on paper-based procurement systems that are inefficient, labor intensive, and expensive to administer. Netscape Buyer/Xpert lets employees order from their own easy-to-use web browser.

Purchasing managers can use Netscape BuyerXpert's dynamic approvals to establish criteria for approvals and automatically route orders to appropriate managers. They can negotiate more favorable contracts with suppliers, thanks to BuyerXpert's efficient capturing of accurate purchase data and aggregating of purchase volume. BuyerXpert is also flexible, adapting to changing business processes and easily integrating with existing systems.

Netscape BuyerXpert is part of the Netscape CommerceXpert product family, which enables businesses to easily conduct commerce on the Internet.

FEATURES OVERVIEW Empowers employees to create, approve, and track orders while

approve, and track orders while preserving corporate controls. Supports open, standards-based catalog, ordering, and payment transactions with security features

Circulates orders for approvals by using workflow for quick turnaround.

Configures application behavior

Netscape BuyerXpert Internet Commerce Application for Enterprise Purchasing

Organizations are rapidly adopting Internet-based purchasing systems to automate the entire procurement process from employee to supplier. With Netscape BuyerXpert, purchasing professionals can set up an electronic collection of approved vendor catalogs so that employees have one central resource for products and services. BuverXpert makes employee self-service ordering a reality by giving employees the means to create, approve, and track orders from their web browser while it preserves corporate controls. Purchasing executives can automate the process to streamline approval and speed order fulfillment. By efficiently capturing accurate purchase data and enforcing corporate contracts. BuyerXpert can reduce procurement costs. It enables purchasing professionals to improve productivity, reduce order processing costs, minimize order cycle time, and take full advantage of volume discounts.

Open Supplier Participation

Netscape BuyerXpert provides a wide range of choices for supplier participation and ensures that partners are not burdened with proprietary software or data formats. Small suppliers need only an Internet client, such as Netscape Communicator, that supports Internet security standards. Larger suppliers can take advantage of interoperability with Internet selling systems, such as Netscape SellerXpert, that conform to the Open Buying on the Internet (OBI) Consortium's specifications.

Self-Service Ordering

Using their web browsers, employees can quickly order items from their Netscape BuyerXpert collection of approved supplier catalogs. Because complex contract terms and order limits are transparently enforced, routine purchases can be handled by employees - freeing purchasing professionals for more strategic tasks.

Dynamic Approvals

When an order is submitted, Netscape BuyerXpert determines the correct approval path by established criteria such as employee role, dollar value, items being purchased, and shipping information. BuyerXpert's automated workflow triggers and manages the process by using email for notifications, reminders, and escalation.

Configurable Business Logic

Business rules allow customers to tailor Netscape BuyerXpert functionality to keep pace with changing requirements. Rules define how a purchase is handled and enable BuyerXpert to guide requesters through the buying experience based on who is placing the order, the item being bought, and the supplier.

and terminology to in specific business practices. Helps organizations gain insight into enterprise operations and purchasing patterns. Leverages existing investments in enterprise applications.

Full-Featured Reporting

A comprehensive reporting system, complete with graphs, charts, cross-tabs, and hyperlinks helps procurement professionals analyze purchases and make strategic changes in supplier relationships.

Intuitive desktop ordering on your intranet accommodates both entry-level and advanced supplier participation on the Internet.

Complete Order Management

Creates requisition and purchase order from catalog or order form

Allows contracted and nonstock, off-catalog purchases Supports repeat orders and multiple orders in progress Enforces accounting codes and employee spending limits Determines contract pricing with discounts, allowances, charges, and promotions

Estimates freight based on shipping point and carrier selection

Supports invoice, cash, and credit payments Updates order status automatically Searches full or partial receipt of goods Incorporates enterprise purchasing system interfaces

Multivendor Product Catalogs

Identifies products rapidly by using keyword search, hierarchical browsing, and parametric search Supports local catalogs or distributed, supplier-managed catalogs

Features multi- or single-vendor displays
Allows personalized views for partner-specific pricing and terms

Supports Dun & Bradstreet Standard Product and Service Codes or company-defined commodity codes Uses electronic data interchange (EDI), text, spreadsheets, or manual data entry to load and maintain data Classifies products with online graphical authoring tools Supports multimedia for text, graphics, audio, and video

Dynamic Workflow

Manages approvals, declines, and requisition notifications Dynamically creates approver lists based on employee roles Supports company-defined processes Uses rules-based, conditional routing with email integration Supports approval reminders and escalation Allows for ad hoc changes to approver lists Uses visual administration of complex workflow processes

Advanced Membership and Profile Management Supports user groups and hierarchical organizations Enables secure name and password sign-on Supports digital certificates for optional authentication using X.509 self-issued or third-party certificates

Full-Featured Reporting System

Displays and prints browser-based reports Embeds graphs, charts, cross-tabs, and hyperlinks Includes access controls on preformatted, option-driven reports

Creates standard or custom reports
Supports object-oriented report building
Features scheduling, versioning, and batch processing
Includes demand paging and multithreaded viewing

Configurable Business Rules

Provides more than 200 preconfigured business parameters Separates system behavior and application data Supports run-time evaluation and conflict resolution Displays menu and tree-driven Java administration interface

Comprehensive Security Features

Uses Secure Sockets Layer (SSL) for point-to-point data communications

Employs RSA password and credit card encryption Uses X.509 digital certificates

Cross-System Interoperability

Supports OBI version 1.0

Uses open, published C++ application programming interfaces

Works with Netscape SellerXpert's complementary solution for supplier-managed Internet catalogs and ordering

Tight Integration With Netscape ECXpert

Transmits data over public and private networks Supports ANSI ASC X12, EDIFACT, UCS, and other standards

Uses a graphical tool for any-to-any mapping and translation Incorporates legacy communications with batch scheduling to interface with mainframe, Unix, or Windows NT Stores documents, tracks services, and manages tasks Supports the Simple Mail Transfer Protocol (SMTP) and Secure Multipurpose Internet Mail Extensions (S/MIME)

Netscape CommerceXpert Architecture

Incorporates Java and HTML interface
Supports Netscape ONE (the Open Network Environment)

Features Common Object Request Broker Architecture (CORBA) and platform-independent, Internet Inter-ORB Protocol (IIOP) object messaging

Uses Netscape server application programming interface (NSAPI) for concurrent processing

Permits distributed components within an extensible architecture

Centralizes attribute definition and graphical user interface (GUI) fields

Employs standard and consistent data element storage, data-driven application flow, and JavaScript use Allows for database independence

Features run-time monitoring, audit and logging, backup, and archiving

Uses a staging environment to test major functions and incrementally migrate changes to production

Supported Platforms & System Requirements

Operating System Sun Solaris 2.5.1 Recommended Memory 256MB Recommended Disk Space 3GB

INTERTRUST COMMERCE ARCHITECTURE

HOME

InterTrust Commerce Flow

CREATOR

The creator packages one or more pieces of digital content with a set of business rules in a DigiBox secure container, and sends the DigiBox to a distributor.

DISTRIBUTOR The distributor

adds to and/or modifies the business rules in the DigiBox within the parameters allowed by the creator, and places the DigiBox on a Website content server.

CONSUMER

The consumer downloads a DigiBox from the clearinghouse content server. The consumer uses the content according to the business rules. This action generates financial and usage records that are sent to clearinghouses. The consumer may forward the distributors' DigiBox to other consumers, who can consume the content under the control of the same business rules.

CLEARING HOUSE

The financial collects. processes, and aggregates financial transaction records, debits consumers' accounts according to their content usage and credits creators' and accounts.

The usage clearinghouse collects, processes, aggregates, and summarizes usage information, and provides these usage reports to creators and

3/1/98 3:17 PM

distributors.

The InterTrust Commerce Architecture uses InterTrust's DigiBox secure containers to safely store and transport digital content. These tamperproof electronic packages allow commerce participants to bind business rules such as payment, usage, and metering rules to any kind of digital content—text, graphics, executable software, audio, or video. A creator can specify separate charges for such operations as viewing, printing and excerpting the content in a DigiBox container, and choose from many payment models such as pay-per-view and rent-to-own. The creator can tailor usage and payment rules to past buying patterns, classes of consumers (giving an automatic discount to college students, for example), and other criteria. As permitted by the creator, distributors can specify additional rules such as value-added markups. InterTrust thus supports traditional value chain management in the electronic world.

A consumer downloads a DigiBox from the distributor's Website content server. After reviewing and accepting the business rules, the consumer accesses the content under the control of the rules. This process automatically creates secure financial and usage records of the transaction and sends them to clearinghouses. Consumers can freely redistribute DigiBox containers to others, who can also use the content subject to the same business rules. The financial clearinghouse processes the transaction records from all users, charges the consumers' accounts, and credits the creator's and distributor's accounts according to the business rules that were packaged with the content. If the business rules in the DigiBox specify the metering of content usage, such usage information is collected when a consumer accesses a piece of content. This usage information is sent to a usage clearinghouse which processes and aggregates metering information, creates usage reports, and passes them on to the creator and distributor.

Services

Would you like an "Internet salesman" who boosts your profits ?

Imagine a tireless salesman who shows and sells your products to thousands of clients all over the world 24 hours a day, 7 days a week. Now you have an idea of what means to purchase a Virtual Shop at Clickstore.

A Virtual Shop is your shop-window on the web where you can show your catalog and sell your products, not only, it's at Clickstore, a permanent web trading centre that will provide thousands of visitors to boost your business.

We don't claim to be the ones who invented the web store concept, but we surely made it really effective.

Clickstore allows you to sell your products in an absolutely new, easy and effective way thanks to the vending system we developed for you.

Many web stores oblige their customers to send them data and images about every single product which they vary in their catalog, then a clever operator will update the product page(s). This costs money and vendors have to wait days or even weeks to see their price list updated... maybe too late.

A way to keep costs low and to see the price list updated on the fly would be to let the vendors modify their web catalog on their own by their Internet browser, but this would be very slow without a super-fast Internet connection, so it would result into high telephone costs and it would greatly limit the number of products you can really manage on-line... but that's not what you want, right?

We made much more !!!

With Elastico Internet Trade you can create/modify your catalog off-line, no matter how many products, take all the time you need since you are not spending a penny for the telephone company.

Then you just go on line and click the "Export Catalog" button, it will update your Virtual Shop, and it will collect the new orders from your clients, it'll take just a minute!!!

All you need is a PC, Windows 95TM and an Internet dial-up connection.

Let us explain why you are going to become our customer...

/

EASE OF USE

have you ever seen a web store so easy to navigate for buyers and so easy to manage for vendors?

/ POWER

Clickstore allows you to put hundreds of products on line, each one with its photo, description, features, a different price for different sales targets, such wholesale, retail, etc. (yes, you can password protect the price lists for your dealers), a currency for every price and much more.

Moreover, since you may want to sell both in your country and in the rest of the world (that's why the Internet is great!) Clickstore allows you to publish your catalog in two different languages, maybe your mother tongue and english of course.

/ FLEXABILITY

You can change the setting of your Virtual Shop whenever you need, how many times you need. For example you can enable or disable the payment methods you prefer:

- cash on delivery
- prepayed check

vending system on the Net.

- transfer order
- · credit card (via Internet and/or via fax)

PRICE

Thanks to the new approach we practise, you can update your catalog when you want, the way you want and every update is

per-catalog-size basis. And more, since we don't need dozens operators to update your Virtual Shop, we can keep the price low while offering the best

totally free!!! Vendors are only charged on a per-time and

1

ADVERTISING

Each Virtual Shop's owner may also advertise his Virtual Shop on his own since every Virtual Shop has a unique address and it can be accessed directly, but in any case he will benefit by the joined advertisement we do for all our customers at no additional fee.

/

DOUBLE WAY IN

Every Virtual Shop has two entrances, one from the Clickstore home page and another one through a dedicated direct address (URL). This way you can use your Virtual Shop as a part of your existing web site just adding a link! You can also personalize the toolbar of your Virtual Shop in such a way that it will seamlessly integrate with the rest of your web site, with your logo, a button linked back to your home page and many other features.

Still doubtful ? No problem, get a FREE 30 days trial !!!

Just follow this four simple steps:

- 1) Download Elastico Internet Trade and install it on your PC.
- 2) Insert your product data, prices and images while you are OFF-LINE (!)
- 3) Ask us for your *FREE* Account ID and Password
- 4) Press the "Export Catalog" button on your Elastico Internet Trade

Don't waste your time, just try it out, you will find out an hell of other interesting features.

FOLLOW US, WE WILL TAKE YOUR BUSINESS ON LINE !!!

THANK YOU

Thank for your interest in the "Virtual Shopping Cart " ordering system! As you can see from the demo PRODUCT CATALOGS, this shopping cart simplifies commerce transactions over the Internet by making purchasing easy, interactive, and secure.

Please also take a look at our new SafeSale commerce package at: http://www.localrep.com/safesale/demosite/default.htm

INDUSTRY BREAK THROUGH

Our advanced shopping cart ordering system gives our clients the ability to add, delete or change product descriptions, graphics, and pricing at any time. Our clients maintain and update their Web sites by dialing into a password protected section and making necessary adjustments or uploading new data from their existing databases. NO PROGRAMMING SKILL IS NEEDED since the information is entered through a "fill in the blank" template.

Features of " THE VIRTUAL SHOPPING CART"

- 1. Simple to use. This results in higher usage.
- Easily allows users to purchase multiple items, increasing average sales.
- Automatically calculates invoices, including applicable shipping and sales taxes.
- Allows site owners to easily add, change, and delete their own products, product descriptions, and prices without HTML knowledge.
- 5. Combined with CyberCash, security of credit card transactions is maximized.

OPTION

You can remotely build your own PRODUCTS CATALOG on our Secure Server or have our consultants/programmers work with you to create either your PRODUCTS CATALOG area or your entire Web site.

PRICING

Basic template* \$250 setup fee
Deluxe template package** \$750 setup fee
Custom Catalog directory*** by quote only

*Basic template, all items on one long scrolling page.

**Deluxe template, one menu page with up to 5 links to scrolling item pages.

***Custom Catalog Directory, several layouts available which can hold

1,000's of items in menu or search driven menus.

Note - Items in all templates and catalogs are entered by the customer using NetLink's WebManger. Custom uploading scripts can be created to upload from existing databases for an extra charge. CyberCash setup is an additional \$250 to process secure credit card transactions.

SERVER SPACE FEES

-Up to 5 MB: \$75 per month -6 to 10 MB: \$125 per month -11 to 30 MB: \$175 per month -31 to 50 MB: \$225 per month -More than 50 MB: quoted

INTERSHOP

INTERSHOP Corporate is a technology framework used by our Professional Services Division to create custom-built, high-end eCommerce solutions for Global 2000 customers like Hewlett Packard, Siemens, and Deutsche Telekom.

INTERSHOP Communications could succesfully develop and deploy business-to-business applications that generate more profit almost immediately.

INTERSHOP Corporate integrates with high-end legacy systems such as SAP R/3 and can link into several EDI standards, including ANSI X.12 and EDIFACT. It is based on open, scalable technology and run's on several database systems including Sybase. Oracle. Informix. MS SQL Server and DB/2.

See how some of the Global 2000 are using INTERSHOP technology:

Browse Edwlett Packard's store!

Browse order #hp.com's store

A typical large-scale business-to-business commerce application. Hewlett-Packard uses INTERSHOP Corporate & Professional Services to provide a complete eCommerce infrastructure to it's customers. Note that this link shows only one particular eCommerce application (there are more within HP built by INTERSHOP Communications) and that you because it's an Extranet - use a guest login that allows you to window shop only.

SIEMENS NIXDORF

Growse SIEMENS's store!

Siemens Nixdorf

Also a business-to-business application, Siemens site was built using INTERSHOP Online as opposed to INTERSHOP Corporate. Siemens Nixdorf sells around 30,000 items to it's customers be they Software, Hardware, Manuals and Accessories. Orders are transferred to The Siemens SAP R'3 system using INTERSHOP EDI. This store is in German only.

Expand Your Business with an Electronic Storefront

Six reasons why INTERSHOP Online is your eCommerce solution:

- ✓ complete ready-to-use software to create and manage an online store
- ✓ integrated business processes to sell on the web, secure payment
- ✓ ready to be easily customized, no programming
- ✓ industrial strength built-in SYBASE SQL Server 11 database
- ✓ extensive connectivity to legacy systems and 3rd party software
- ✓ Analysts agree INTERSHOP Online is best of breed!

Expand your business on the Internet easily, professionally and affordably.

INTERSHOP Online allows you to design and manage storefronts that will individualize your customer's experience, use suggestive selling and raise your revenue by building loyalty.

INTERSHOP Online is also appropriate in business-to-business relationships, allowing you to offer volume discounts and handle company accounts.

INTERSHOP Online will seamlessly integrate with your existing legacy system -- providing you with an Internet storefront without altering your business practices.

DB2 Universal Database

DB2 technology is a proven winner in any world, including Windows NT. Reliable. Versattle. Scalable. This server software stores, manages and retrieves data. It operates according to defined rules for security, multiple user access and data management. No matter how large or small your Windows NT world may be, DB2 makes your data safe, secure and easily accessible. Now, do you want to weave in audio, video, graphics, text and other non-traditional data types? DB2 handles it all with ease.

See for yourself how well DB2 runs in Windows NT.

Download or request DB2 Universal Database V5.0 trial codel

Visual Warehouse

Visual Warehouse - the datamart builder for NT. Like a DataWarehouse a datamart contains informational data optimized for enduser decision making and data analysis. With Visual Warehouse you can quickly build a datamart that leverages the use of your existing data e.g.; pull information out of Oracle, Sybase, SOL server and Informix and merge with host data from VSAM, DB2 or flat flies. With built in job scheduling and extract capability the datamart is ready for use with your favorite query and reporting tools.

Net.Data

Net.Data Version 1.0.10 is IBM's strategic product for enabling intermet/intranet access to relational data on a variety of platforms. All of the most prevalent databases can be data sources for your Web application: DB2, Oracle, Sybase, ODBC data sources as well as flat file data.

Net. Data provides for high performance, robust application development function, and exploitation of existing business logic. Net.Data tightly integrates with Web-server interfaces, providing higher performance than common gateway interface (CGI) applications. Net.Data supports client side processing, server side processing with Java, REXX, Perl and C++, conditional logic and a rich macro language.

Designed to meet copy needs in the relational environment for operational and informational applications, IBM DataPropagator Relational replicates data throughout databases in the DB2 family, and provides powerful copy capabilities that support data distribution, data consolidation, and data enhancement to help you reengineer business processes and improve decision making effectiveness.

MQSeries for Windows NT brings business worlds together with reliable and transparent integration between Windows NT and 20 other major computing systems. With this award-winning solfware, you can integrate newly-developed NT applications into larger networks no matter how many platforms or network protocols are involved. You'll cut development and maintenance costs. Deploy business solutions faster. And gain a greater return on that hefty investment you've made in systems and resources.

Platform-Specific Information about MQSeries for Windows NT

Transaction Server for Windows NT, Version 4 is a new member of the IBM Software Server series, a family of modular application servers. IBM Transaction Server acts as a robust, enterprise-wide coordinator and integrator of servers, managing high-performance applications and data sources across the network.

IBM Transaction Server for Windows NT, Version 4 offers a choice of two types of transaction processing solutions for Windows NT: CICS(TM), the most popular transaction processing product in the world; and Transarc's innovative Encina distributed transaction processing technology.

Platform-Specific Information about IBM Transaction Server for Windows NT

IBM ADSTAR Distributed Storage Manager

Searching the heavens for enterprise-wide storage management? All worlds fall easily into orbit around ADSM. It supports the broadest range of platforms, devices and protocols. You can count on super reliable automated backup and recovery, archiving, hierarchical storage management and disaster recovery or a safer world for all your data. ADSM provides proactive data protection across your business' many computing worlds. Scalability? How far do you want to go? A single server? Or an entire, far-flung enterprise? ADSM can take you there.

Introduction

The rapid growth of the World Wide Web has opened the newest frontier of commercial opportunity. Smart companies are looking for Internet solutions that give them the competitive edge in this hot market arena.

Today's Web sites cannot attract audiences with yesterday's technology. To compete successfully, commercial sites must sharpen their presentations and approach their customers as individuals, offering them not only quality products but real-time information and personalized services as well.

Commerce Server provides a comprehensive solution to this challenge. It offers the ultimate in customer experience, easy setup and administration, and the most advanced promotion-based merchandising technology available. Commerce Server can be used out of the box to set up a basic online store, or it can be customized to fit a merchant's specific needs. And Commerce Server is the only integrated commerce solution that will work with your existing relational databases.

Powerful, flexible, and easy to use, Commerce Server meets the needs of companies that want to establish a strong and lasting presence on the Internet.

What does Commerce Server offer?

Commerce Server is the ideal way to create and maintain a sales presence on your Web site. With flexible configuration to get your site up quickly, complete yet extensible order processing, and tools to help you actively sell and promote, Commerce Server is the clear choice for companies that want to go beyond just publishing online.

The key advantages that Commerce Server offers are:

- Creating a compelling and secure buying experience
- Requiring minimal custom development
- · Providing the ability to conduct dynamic promotions

The best shopping experience for your customers

Commerce Server gives your customers the excitement of shopping on the

Internet, plus the appeal of personalized services and the familiarity of credit-card payment. Web users open a Commerce Server site and immediately find themselves in a virtual store. From there, they can easily navigate the departments and product pages that make up the store. They will be impressed by the convenience of online shopping, and chances are, they will want to return.

The following features make Commerce Server particularly appealing to buyers:

- · Convenient and hassle-free shopping
- · Personalized/custom services
- Secure payment

Shopping convenience

Customers will be pleased by the convenient, hassle-free environment of the online store. You can design attractive, appealing product displays and offer a bounty of items in their full range of sizes, colors, and other attributes. For the buyer, moving from one product to another or moving between store departments is as simple as a mouse click.

Search Function

A flexible searching mechanism, based on SQL, allows you to build in the most appropriate search criteria for the store's particular product line and layout. Buyers, not limited to a fixed, narrow set of search criteria, will be able to search through your product database and find what they are looking for.

Shopping Cart

A built-in feature called the Shopping Cart allows your customers to select items that they want to buy, and to collect the items in a list. As in a real store, buyers can at any time review the items they've collected, add to the contents of the cart, change the quantity of any item, and remove items from the cart if they change their minds. As a buyer collects products, the price is totaled, complete with tax and shipping costs. When all items are selected, the buyer can complete the order and pay for it online.

If a customer exits the store before completing the purchase, the Shopping Cart has the flexibility, based on the merchant's store design, to keep the items that have been selected. When the customer returns, all previous selections will still be in the cart.

Personalized services

Customer loyalty is important in any business. With Commerce Server, you can give your customers one-to-one services that will bring them back to shop another time. You can offer them specials and promotions that take their individual needs and preferences into account. By doing this, you can help them find exactly what they want without wading through pages of information about products they might not be interested in.

In addition to sales and promotions, Commerce Server supports personal touch services such as gift messages or special greetings, or delivery according to specific instructions such as delivery on a specific date (for example, December 24).

Your customers will quickly see that your online store is not only an attractive place to shop, but also a place where they can count on personalized service.

Secure payment

It is crucial for your customers to know that their financial transactions are safe from credit fraud and that their purchases will reach them expeditiously. The ability to charge purchases against their existing credit card accounts with real-time credit card authorization gives them a familiar method of payment, but it is just as important that their transactions be tamper-proof. Commerce Server has built-in features that answer these needs.

Security

The initial version of Commerce Server uses Internet-standard Secure Sockets Layer (SSL) channel encryption or Personal Communications Technology (PCT) to protect credit card information. SSL encryption is built into standard Web browsers, including Microsoft Internet Explorer and Netscape Navigator. Commerce Server supports the Secure Electronic Transaction (SET) protocol, developed jointly by Microsoft and Visa International. Together, these protocols provide state-of-the-art protection for both you and your customers.

See the "Convenient order and inventory management" section for information about transaction security and VeriFone® vPOSTM.

Order confirmation and status

After a buyer has selected a method of payment and the payment is approved, Commerce Server sends the buyer a confirmation. At your option, orders can be assigned tracking numbers so that the customer can inquire about the status of the order and you can readily track the order information.

Ease of setup and administration

With Commerce Server, you can set up an online store that fits the way your business works without a lot of complicated and costly custom development. After you have your store up and running as you want it, easy- to-use administrative tools help you reach and serve a potentially global customer base.

Commerce Server will also work readily with your existing product database. (For information about schema independence in Commerce Server, see the *Flexibility Through Extensibility' section.)

The following features, designed to facilitate your management tasks, make Commerce Server the best choice for your online sales:

- · State-of-the-art stores with minimal custom development
- · Dynamic product management and presentation
- · Convenient order and inventory management

State-of-the-art stores, minimal custom development

Using Commerce Server, you can quickly set up a selling presence on the World Wide Web, customize the system to meet specific marketing needs, and begin selling products to an international audience.

2/26/98 4:18 PM

Easy setup

You can, of course, design and set up your online store from scratch, but you don't have to. Starter stores, HTML templates for the development of an online "store," make it possible to build a sales- oriented Web site without having to design the site layout-or individual pages-from scratch. These building blocks can save a great deal of time and resources.

Starter Stores

The starter stores shipped with Commerce Server are in part basic templates. in part operational samples that can be modified to fit a specific sales model. They provide formats for a home page, product pages, company information pages, and other typical structures of a Web site designed for online selling. Templates consist of hard-coded HTML as well as page-generation directives (keywords) that specify what data should be inserted in a page, what gueries should be run against the database, and so on.

You can think of a starter store as a kit for constructing a prefabricated sales site, complete with basic building blocks.

The starter stores provide a good basis for customization. In fact, this is most likely how you will find them useful-not as an exact blueprint, but as a foundation for your online store. Included in each starter store is a set of administrative tools that give examples of how to manage the store operations.

Authoring and media tools

Commerce Server supports all standard HTML and HTML-related tools. As you design your online store, you can use your favorite software for creating Web pages and adding media enhancements-pictures, sound, or video.

Dynamic product presentation and management

With Commerce Server, you don't need advanced programming skills to put a wealth of product data online or to modify the contents of your store.

Dynamic page generation

Dynamic page generation means that HTML pages are created "on the fly," simplifying implementation and reducing costs. Thanks to dynamic page generation, your online store can keep pace with changing product specifications and promotions. Pages can be personalized according to data collected from individual customers and from the product database.

Product presentation

The system's database management functions allow you to offer individual products in any number of colors, sizes, versions, languages, and so on. Buyers can be prompted on an HTML form for more specific product options, ranging from personal monograms to optional warranty service.

Updated pricing and promotions

Dynamic page generation makes it possible to adjust product pricing in real time, as often as necessary. Featured products can be spotlighted; you can present a feature of the day, or a feature of the hour, if you like. Special sales promotions can be aimed either at the entire online audience or at particular buyers based on customer demographic data.

Cross-selling and up-selling

When a buyer selects an item for purchasing, the system can automatically suggest a complementary item (cross-selling) that is available in the store; for example, a buyer who selects a camera can be offered a tripod as well. Or the system can suggest a similar item of better quality (up-selling).

Ease of management

A user-friendly HTML form, designed by you or a service provider, makes it easy to add, remove, or modify product items and their attributes. Thanks to this form, in combination with dynamic page generation, you can focus your energies on managing your store—not on authoring Web pages or struggling with code.

Convenient order and inventory management

Commerce Server features real-time pricing that supports a variety of payment methods and adds in applicable tax and shipping charges. VeriFone vPOS software is available for secure payment processing.

VeriFone vPOS

For the first time, this industry-standard payment software is bundled with an Internet selling solution. When coupled with payment software available from your choice of financial institutions, vPOS gives you an integrated, comprehensive mechanism for handling credit card transactions securely over the Internet. vPOS communicates directly with the financial institution to effect authorization, capture, and other payment functions.

In contrast with other Internet selling solutions, Commerce Server does not tie you to a specific payment-processing method. Microsoft continues to work with third parties to provide support for payment in multiple forms, including emerging payment methods.

VeriFone vPOS is a flexible point-of-sale application that enables merchants to process Internet payments securely. vPOS accepts order information from a secure HTML form or a wallet application, and then processes the transaction by communicating with an acquiring bank's gateway via the Secure Electronic Transaction (SET) protocol. Credit card transactions are routed to the acquiring bank for immediate authorization; no manual processing is needed. vPOS also includes payment reporting and management capabilities, allowing transaction functions such as capture, returns, credits, and reversals, and generating terminal and host transaction reports.

Before "going live" with vPOS, you can test the functionality with your Microsoft Commerce Server store by exercising transactions through a test gateway. When you are ready to deptoy live online transactions, you establish a relationship with a bank. Your bank will assign you a merchant ID, public key certificates, and bank-specific vPOS software to complete the connection to the bank's own host system.

Flexible order processing

Commerce Server provides an extensible applications programming interface (API) architecture that enables your company to integrate incoming Internet orders with existing legacy or third-party systems for inventory management, tax, shipping, and fulfillment.

Real-time pricing

When a buyer selects a product on a Web page, the price of the product is verified by an instant database look up. Basic shipping and handling calculations are built in, and these price components can be extended through the use of third-party software. Microsoft is working with many software vendors to add functionality throughout the order-processing cycle.

Taxes can be added into the pricing in either of two ways:

- By using the simple, built-in tax calculator that works for U.S., Canadian, European, and Japanese markets
- By integration with Taxware or other third-party tax software for more advanced tax calculation

The simple U.S. tax component is intended for evaluation purposes.

Shipping options

Commerce Server version 1.0 has basic shipping calculation and look-up capabilities built into the product. The shipping component can calculate shipping costs based upon varied factors: a fixed amount for any order taken, the sum of items on a particular order, or a look-up cost in a database. In addition to shipping, handling is also computed in the order pipeline within Commerce Server. Handling costs can be calculated in a manner similar to shipping.

Commerce Server includes a set of applications programming interfaces (APIs) for extending the order- processing functionality. For example, both shipping and handling can be extended to offer more functionality through the use of TanData's Progistics software or other third-party software.

Order routing and tracking

As an option, Commerce Server can integrate existing fulfillment systems with a variety of order formats and transports (EDI, e—mail, and others). The system also offers a number of choices for tracking orders and reporting on their status.

Inventory management

The extensible inventory management feature accommodates multiple levels of inventory integration. For example, you can choose integrated inventory control with your existing inventory management system, dedicated inventory control that works by decrementing the database for each order coming into the online system, or no inventory management control.

Promotion-based merchandising

Promotion-based merchandising, one of the greatest strengths of Commerce Server, is a vital and powerful tool in Internet commerce. Your company can quickly create targeted discount promotions based on detailed user tracking, and analyze the promotion results for future planning. This new technology enables you to offer your customers attractive sale prices, improve your product strategy, and provide a customized environment for each individual buyer.

Customizable buyer data and data-management tools

With Commerce Server, you can collect and store buyer data, manage membership accounts, and create customized site reports.

Buyer data

Through a customizable HTML form, you can collect any details you want about individual customers: age, gender, address, hobbies and special interests, as on. You can keep track of an individual buyer's purchase record and number of visits to your online store. From this information you can generate individual consumer profiles that, in turn, can be used for compiling mailing lists, making personalized promotional offers, and customizing the shopping experience.

Membership management

As an option, you can offer memberships in your online store. Commerce Server will support membership accounts, password log- in, and membership discounts.

Analyzing Store Activity

You can use any standard reporting tool to generate data on sales, traffic, demographics, and other statistics. Graphic displays present the data in easily readable form. You can use the data for informed decisions about future product presentation, promotions, and other features for your Web site.

Targeted promotions

Commerce Server supports sale pricing, volume discounts, member discounts, featured products, cross- selling, up-selling, and replacement promotions.

For example, sales promotions can be:

- Aimed at buyers of a particular age range or living in specified ZIP code areas.
- Customized to reflect data on an individual customer's purchasing
- Configured to last for a limited time only ("Offer valid until December 31," or the like).
- Geared for the quick sale of inventory that needs to be moved.

A powerful system for online business

The ever-expanding reach of the Internet presents opportunities and challenges for today's businesses. Maintaining an online presence requires you to be alert and nimble. Commerce Server gives you the flexibility to meet changing conditions in the online market and the power to make your message heard.

Flexibility Through Extensibility

One of the most valuable qualities of Commerce Server is its flexibility. The open architecture supports multiple configurations, and the system is thoroughly extensible, both by integration with other Microsoft technologies and through third-party components.

Moreover, Commerce Server is the only online commercial solution that gives you database schema independence. This can save you from the costly, and sometimes messy, process of changing your product database setup.

Published APIs

Microsoft makes its Commerce Server technology available through published application programming interfaces (APIs). This means you can integrate existing components; for example, a legacy system that handles credit-card settlement through your preferred financial institution. It also means that you or any third-party company can build custom components that plug into Commerce Server.

The order pipeline

A good example of the extensibility of Commerce Server is the order pipeline, the sequence of steps through which orders are processed. These steps include the passing of information from customers to Commerce Server about items they want to buy; the passing of information among components within the server; sometimes, the passing of further information about price adjustment, tax, and shipping costs from the server to the customer; and so on until an order is completed.

The order pipeline can be customized at any of its stages. You can use standard components as they are, manipulate them, or install third-party components.

For more information about the order pipeline and order-processing

IP*customer.link -Business-To-Business Sales Management

IP*customer.link leverages the low-cost and global accesibility of the Internet to provide businesses a complete sales management system.

IP*customer.link features:

- · Customized order guide
- Multimedia catalog
- Real-time data
- · Customer credit and account information
- Supplier information
- · Efficient search tool
- · Secure transactions and data exchange

The IP*customer.link order guide is individualized for each customer and designed for quick execution of repetitive ordering tasks. Additional features include:

- · Product preferences
- · Custom pricing
- Product availability
- Immediate order extension and confirmation.

Through IP*customer.link's dynamic interface to host systems, suppliers can offer up-to-the-minute information about their products and services. IP*customer.link supports immediate product allocation and host update processes. Other information can be updated on a scheduled basis.

Together IP*customer.link's functions offer the complete business-to-business sales management solution, helping businesses participate in the electronic commerce marketplace. For additional information about IP*customer.link, contact <u>IPNet</u> Solutions.

IP*edi.link -Reliable, Secure and Low-Cost EDI

IP*edi.link provides a low-cost and reliable framework for secure electronic commerce over the Internet.

IP*edi.link features:

- Support for all ANSIX.12, EDIFACT and custom EDI standards
- · Multiple network support
- · Configurable Transaction Routing
- Custom standards and network options by trading partner
- · Custom preferences by trading partner and/or by user
- · Built-in editing and balancing
- · Comprehensive EDI activity reporting
- · Secure data transfer
- · Direct transaction entry
- Easy-to-use interface
- · Online documentation
- · Context-sensitive help

IP*edi.link takes advantage of low-cost Internet standards to provide the reliability and security of traditional EDI solutions while dramatically lowering the costs of entry and operation. IP*edi.link can actually reduce EDI expenses by as much as 90% when compared to Value-Added Network (VAN) usage fees.

By providing custom EDI transaction standard and networking options for each trading partner, IP*edi.link creates a smooth migration path to Internet-based Electronic Commerce. For additional information about IP*edi.link, contact IPNet Solutions.

Plus, IP*edi.link features Configurable Transaction Routing (CTR), which allows you to specify different transport modes for each transaction for each trading partner. For example, you can now send mission-critical transactions such as purchase orders and invoices through your favorite value added network, and less critical transactions, such as a 997 functional acknowledgement, through the Internet. And, you can customize your network configuration for each trading partner. We know of no other EDI product that offers this level of flexibility.

Take our <u>Online EDI Survey</u> so that we may better accommodate your e-commerce requirements.

Transact: The World's Premier Enterprise Application for Internet Commerce

Internet commerce is no longer an option for market leadership. It's a requirement. That's why so many enterprises are turning to Open Market TransactTM. The world's premier Internet commerce enterprise application, Transact is:

Comprehensive. Transact implements industry best practices for the entire Internet commerce cycle. In fact, Transact supports some of the most successful Internet commerce sites on the Web, including AT&T, Barclay's Bank, Time Warner Pathfinder, and Disney. Moreover, Transact supports the full range of business models — business-to-business, business-to-consumer, and information commerce — and allows businesses to offer physical goods, digital goods, and subscriptions. Delivered as an enterprise application, Transact can support every business without long and risky

programming projects.

Flexible. In use by over 1,000 businesses in more than 25 countries, Transact supports multiple languages, currencies, payment methods and business models simultaneously. The modular structure of the system allows it to grow with the evolving needs of your Internet business. Its object-oriented application program interfaces (APIs) allow it to be tightly integrated with other enterprise systems, unique payment gateways, and custom Web sites. And its unique, distributed architecture allows Transact to support multiple divisions, lines of business — even multiple companies — with a single Transact server.

Transact takes care of the complexities of Internet commerce so you can concentrate on running your business.

INTERNET RADING World-class Internet Business Solutions

Extending Intranets Across and Beyond the Enterprise

Welcome to Rialto! The place where you will find the tools and expertise you need to build an infrastructure that can accommodate today's fast-changing market requirements. A place that offers flexibility in gathering knowledge from your existing information systems and moving it to the right place at the right time, safely and securely.

Rialto is Control Data's electronic marketplace - a series of solutions for business and government institutions who want to inject global intelligence into their intranets and transform these technology-driven resources into business-driven infrastructures. The objective is to provide three key benefits:

- Enable desktop users to more easily locate information within their enterprise.
- Enable institutions to secure their infrastructures and protect their resources.
- Enable institutions to cost effectively manage their infrastructure.

At the heart of Rialto, Control Data designs and builds infrastructure solutions that reflect the following forms of enterprise intelligence:

The accompanying diagram illustrates how Rialto solutions relate with one another within a global infrastructure and to the client-server applications that deliver business-specific functionality to information users.

RIALTO Concepts

Control Data builds Rialto infrastructures as foundations that institutions can leverage to implement both enterprise and intercompany business solutions. In essence, Rialto infrastructures enable companies to pursue aggressive business strategies that require the implementation of sophisticated IT capabilities, including the use of electronic commerce, enterprise collaboration, and enterprise decision support.

Introducing Consultation Suites & Technology Labs A Unique & Innovative Approach to Exhibiting

e-Congress is proud to introduce a brand new forum that fosters an atmosphere where real business can be conducted and a serious dialogue established between vendors and users of electronic commerce. Rather than the hustle and hype of traditional trade shows where there is "more show than substance," exhibitors at e-Congress '98 will be located in a series of Private and Shared Consultation Suites & Technology Labs adjacent to the conference session rooms. Delegates will have the opportunity to:

- Sit down and meet with leading providers of electronic commerce technologies in a quiet atmosphere free of trade show gimmicks and giveaways.
- Strategize with electronic commerce experts on your particular EC needs and goals.
- Establish meaningful partnerships with the top vendors in the industry.
- Test drive the latest and greatest electronic commerce technologies.

All in a setting highly conducive to doing serious business.

Expect to see electronic commerce technologies and solutions in the e-Congress Consultation Suites like these...

About Our Sponsors and Endorsers

Deloitte & Touche Consulting Group Deloitte & Touche Consulting Group provides the solutions that enable businesses to operate with greater effectiveness. Our solutions and technical expertise of our

are based on the in-depth knowledge and technical expertise of our consultant team. We develop practical and cost-effective solutions that result in efficiency and a financial boost for our clients. We are a member of Deloitte Touche Tohmatsu International (DTTI), a global leader in

professional services with 63,400 people in more than 126 countries.

The Association for Electronic Commerce Professionals International, Inc. (AECPI) is the only association chartered specifically for the support, edification and to advance the cause of the EC/EDI professional as an individual.

The AECPI was formed by EC professionals for EC professionals. The core elements of the corporate charter encompass essentially any services which are deemed by

the membership as valuable and contributory to the professional growth of the membership.

CommerceNet is a unique, not-for-profit global research and business development organization whose mission it is to develop the next generation of electronic commerce, and create business opportunities for members. CommerceNet focuses on Int pre-competitive global and industry-wide issues that allow members to gain a unique perspective on electronic commerce

business, market and technology directions. The organization creates value by providing research on the next generation of electronic commerce, enabling its 500+ members worldwide (vendors and end users) to jointly work on key issues relating to electronic commerce, prototyping and piloting next generation electronic market places and capitalizing on emerging business opportunities. CommerceNet's global perspective, open and collaborative membership, value-added services, technology research and relationships with market and technology leaders are setting the framework for the emerging Internet marketplace.

Official Media Sponsor

EC.COM magazine is edited for technical and corporate management who find it essential to keep pace with the technical and business issues/strategies relating to the converging technologies of Electronic Commerce. These

enabling technologies and standards include; EDI, the Internet/ Intranets/Extranets, e-mail/messaging, Workflow, Groupware and Content Management.Editorial content provides articles, case studies, columns as well as specific EC technology departments. Staff written as well as authorities from various EC technology fields address planning and implementation needs for a wide range of commercial market segments and key government agencies. EC.COM has been endorsed as the official magazine of CommerceNet.

The Financial Services Technology Consortium (FSTC) is a not-for-profit consortium of banks, financial services providers, technology companies, national laboratories, universities, and government agencies working together to enhance the competitiveness of the U.S. financial services industry.

FSTC sponsors project-oriented collaborative research and development on interbank technical projects affecting the entire financial services industry. Particular emphasis is placed on payment systems and services, and leveraging new technologies that help banks cement customer relationships, boost operational efficiency, and expand their market reach.

INTERACTIVE The Interactive Services Association is the leading association devoted solely to promoting and developing ASSOCIATION consumer interactive services worldwide. The entire

interactive industry is represented among its over 300 members including Internet and online services, interactive television and entertainment, screen telephone, interactive telephone, interactive marketing, electronic commerce and interactive gaming.

Jupiter Communications is a new media research firm that helps companies make intelligent business decisions about consumer interactivity. Focused exclusively on how the Internet and other technologies are changing

traditional consumer industries, Jupiter's Strategic Planning Services (SPS) deliver a continuous flow of analysis, primary data and market projections. SPS offers companies investing in new technologies a framework for realizing return on investment-both for new lines of business in mainstream media, entertainment, commerce and marketing, as well as for Internet- and technology-based startups.

Mainspring Mainspring is an Internet strategy advisory service analyzing the business impact of Internet initiatives. By delivering incisive analysis and keen insight into the business issues, Mainspring helps business and technology executives optimize their Internet strategies for enterprising results.

Unlike traditional research organizations, Mainspring's Internet business strategists deliver candid, "real-world" analysis based on comprehensive case studies, industry trends, benchmarking data, and expert business acumen. Executives benefit from specific "Points of Reference" to assist them in justifying the business value of their Internet initiatives while broadening their competitive intelligence.

Mainspring can optimize your Internet strategy for business gain. Explore our service today at www.mainspring.com.

OBI (Open Buying on the Internet) is an open, vendor-neutral, scalable and secure standard for conducting business-to-business Internet commerce. The OBI Standard is the result of work conducted by a group

of Fortune 500 companies and their key suppliers of high-volume, low-dollar goods and services. The work was initially funded by American Express and facilitated by Supplyworks (www.supplyworks.com) and led to the development of a generic set of requirements, an architecture, and an exact technical specification. It also led the creation of the OBI Consortium, a non-profit users' group representing the business-to-business Internet commerce concerns of buying and selling organizations, technology companies, and financial institutions.

Founded in December 1996, the United States Internet Council is a policy forum linking "Internet-friendly" state legislators with their colleagues in Congress and with

leaders from the Internet corporate community. The Council's primary mission is to inform the policy debate on key Internet issues and advance public policies to foster the continuing growth and success of the Internet.

WEBtropolis Product Suite

To understand the WEBtropolis methodology, which is based on sophisticated links to relational databases and other back-end objects, it is useful to conceptualize three layers in the development of a WEBtropolis site. The triangle image below gives a visual representation of these layers.

At the base of the triangle is the <u>WEBtropolis Framework</u>. The framework layer represents the core technology and includes a series of stand alone tools which are able to accomplish a variety of tasks. These tasks might include: user authentication, object integration with the web server, database access, transaction processing, search engine, payment gateway processing, auction creation and other advanced web site functions.

At the center of the triangle are the <u>WEBtropolis Applications</u>. Quite simply these applications are a combination of framework tools which work together to perform a coordinated function such as an ecommerce or auction site. All WEBtropolis applications listed share many common elements yet their function can be quite different. Our most popular applications include ecommerce (ORDERnet), auction (AUCTIONnet) and Intranet/database integration.

At the top of the triangle is the <u>WEBtropolis Business</u> <u>Interface</u>. This final layer allows WebVision to customize

the front-end of the WEBtropolis application for a particular customer or industry. The front-end business interface is written in simple HTML/graphics. The front-end HTML calls on the framework tools within the WEBtropolis application to provide intelligent processing for the information collected at the interface. This feature allows developers to quickly change the graphical look of a site without having to adjust its powerful information processing programs on the back-end.

CARAVAN

Integrated Electronic Commerce Solutions for Global Business

What is Caravan?

How Caravan Works

Services: A Total
Electronic
Commerce
Solution

What is Caravan?

Caravan is an open client-network software integration initiative (technology) that allows non-EDI capable companies or businesses with legacy software and hardware environments to use the Internet for business to business exchange of electronic documents. It will assist large companies in distributing EDI capabilities to small trading partners, and create a central hub where small trading partners can exchange data.

Caravan provides a low cost, easy to use service designed to serve as both a hub and to accommodate all sizes of trading partners involved in global trade

How Caravan Works.

· From the Web to the Desktop

Caravan extends Trade Compass beyond the browser to desktop applications which can integrate with existing accounting and business applications. Through the Web, existing business forms can be translated into electronic counterparts with relative ease. The data from these forms can be connected to purchasing, procurement, and logistics applications thereby eliminating paperwork and saving on data entry costs. Trade Compass Caravan is the next step in this process.

· Industry Standard Partners

Caravan brings together industry standard software from <u>Sterling Commerce</u>, networked data warehouses from <u>Microsoft</u>, and trading partners around the world; creating a secure network through which all types of electronic commerce can flow. Caravan technology is built to industry standard specifications, such as ANSI X-12, and UN EDIFACT; constructed with industry standard technology from <u>Sterling Commerce</u>, and <u>Microsoft</u> and supported by vendors such as <u>Freightdata 2000</u>, <u>Unz Corporation</u>, Integrated Trade Solutions Inc., OCR Inc. and other global trade and logistics software developers.

A Secure Network on Top of the Internet

Caravan creates a virtual private network on the Internet, which allows trading partners to communicate securely with each other. This network provides accountability, certification, and authentication of trading partners. Public Key Encryption is used to protect sensitive transactions, and verify the identity of all users.

· Support for Windows Applications

Through ActiveX technology from Microsoft, virtually any 32 bit Windows application can be EDI enabled to utilize a number of Trade Compass services directly from the desktop, without opening a web browser. Caravan will utilize the enabling technologies of Microsoft Corporation, Sterling Commerce, Trade Compass and other third party software developers to allow any trading partner with access to the Internet to engage in electronic commerce.

· A Central Hub for Communications

Trade Compass Electronic Commerce Center and Logistics Management System (LMS) act as hubs and brokers for sharing information and moving goods between companies.

The Trade Compass Electronic Commerce Center provides a low cost, easy to use service designed to meet the requirements of both a hub and its trading partners.

· Business Opportunities

Companies of all sizes are able to increase profits, decrease costs, reduce lead times, and catch data entry errors through the use of Caravan technology. Large companies can now incorporate a greater percentage of their trading partners by minimizing the effort and investment necessary for smaller partners to transmit electronic transactions. Large companies will be able to use strictly EDI transactions instead of paper documents, and small companies will be able to use the World Wide Web or desktop applications to connect to the system.

Services: A Total Electronic Commerce Solution

- Daily EDI operations including inbound, and out bound EDI Processing and data warehousing.
- · Application mapping.
- Trading partner management and set-up.
- · Connections to established VANs, and government agencies.

QRS. Keystone Catalog Services For Retailers

The retail industry's most comprehensive product information database.

"A keystone is something on which associated things depend for support," (Webster's New Collegiate Dictionary).

QRS Keystone, Catalog Services, was QRS' premier product and remains the keystone to our other value-added services.

Dissemination of product information between manufacturers and their retail trading partners must be accurate and timely. The traditional methods of phone calls and faces are time consuming and resource intensive. An electronic U.P.C. data base, accessible 24 hours a day, is the solution.

QRS introduced the first independent product information data base, using the retail industry standard U.P.C. numbering system, in 1988. Today, QRS Keystone has over 50 million products from over 1600 manufacturers.

A centralized data base such as QRS Keystone is a critical component in improving the flow of merchandise from the manufacturer to the retailer's selling floor and ultimately to the consumer. With QRS Keystone, accurate up-to-date product information is available when the retailer needs it, eliminating weeks from the order cycle time.

QRS Keystone is a Windows based application providing a critical link between retailers and manufacturers. Accessed by nearly 125 of the leading retailers, QRS Keystone is a competitive tool for success.

Using QRS Keystone

After assigning a U.P.C. number to each item, the manufacturer organizes and sends the data, via an 832 EDI transmission, or tape to QRS to be loaded into QRS Keystone. Changes to the data can be made on a daily basis. Retailers with access to a manufacturer's data can view and download the data once it has been added or updated. Automatic update capabilities ensure the most recent U.P.C. data will be in your EDI mailbox quickly.

Interfaces with QRS Keystone

There are three methods to access the data from QRS Keystone: through the mainframe system (CICS), through the Windows application, and through ROAR (Realtime Options for Access and Retrieval). ROAR is QRS's proprietary computer to computer communication interface system providing retailers with a method of data retrieval from QRS Keystone via their own host.

There are four main systems within a retailer's organization that utilize the product data from QRS Keystone. These are: Purchase Order, Inventory, Receiving, and Point of Sale. Each of these systems extract information from QRS Keystone and feed that information into an internal item file. Using ROAR, these systems can talk directly to QRS Keystone, accessing the information immediately when it is needed.

Why this customer chose to use ROAR.

The Sports Authority

"Before using ROAR, it would take a full eight hours to create 250 SKUs. Today we can do that same number in less than 20 minutes

using ROAR." Duane Payne

Requirements to run ORS keystone

- · 486 processor/33 MHZ
- 8 MG RAM (minimum)
 14.4 Baud Modem (minimum) if dial
- connected
- Windows 3.1 or Windows for Workgroups

How QRS Keystone Works For You

Features

- On-line access
- Ability to view multiple catalog functions at the same time
- Selection criteria filters at all levels
- Subset creation
- P.O.S. scanning error reconciliation
- · Automatic update profiles
- Twenty-six extended data elements to identify products such as Trade Name, Availability and Booking Dates, Currency, Fabric Descriptions, Ordering Criteria, Physical Dimensions and many more

Benefits

- Quick and efficient identification of styles and U.P.C.'s
- No need to keep toggling from screen to screen, makes using QRS Keystone more efficient
- This allows the user to tailor the data to only what they are interested in viewing, saving time and money
- Ability to down load specific data, down to the U.P.C. level quickly and easily
 - Saves time and money by eliminating errors at the store level
 - Efficiently receive changes/updates to a vendor's catalog within the same night the changes were loaded
 - Decreases the manual time needed for item set-up by providing a central repository for this additional item information

Why this customer chose to use QRS Keystone.

Federated Department stores

In 1992, federated Department stores announced a program called FASST, federate Accelerated Sales & Stock turn. The program includes automatic replenishment, QRS and EDI, using QRS Keystone and network services.

"U.P.C.'s are the foundation for QRS technology. Through our U.P.C. catalog, vendors are able to communicate product information to us electronically. Federated has over 1500 UCC block ID's loaded from QRS Keystone and with the help of QRS we intend to add many more. We have seen very positive results." Lisa Lichtenberg

Esprit de Corp

In the fashion industry, where styles are constantly changing, it is critical to have a central data base that houses all U.P.C. information. Esprit explains how QRS Keystone helps save both time and money.

We do not have enough staff to send paper or tapes to each retailer as these methods are very resource intensive. QRS Keystone enables us to communicate with our retailers electronically, reducing our labor costs and allowing our limited staff to work more efficiently."

Call QRS today at 1-800-UPC-WORD or E-mail us at QRS@e-mall.com, for more information about QRS EConnect and other QRS services.

QRS Catalyst: Management tools that transform sales data into actionable information.

Are you tired of looking for consumer trends in stacks of paper?

Do you need a tool to efficiently identify changes in the market and track trends?

QRS Catalyst provides the information you need to improve revenues and maintain consumer loyalty by providing the best merchandise mix. Make an impact in business with QRS Catalyst.

QRS Catalyst, the newest service in QRS' group of Inventory Management Services, enables users to track which products are selling. This data can be tracked in several levels;

Traffic Lighting quickly identifies the winning products and location

Graph product performance over time

by U.P.C .and store location or at the total partnership/product category level. Whatever type of data the user needs.

Benefits:

Exception management tools to move from paper stacks to business impact

- Traffic Lighting: Quickly highlights a products performance by store location
- Filtering Capability: Focuses on key performance measures
- Sorting and Ranking: Identifies opportunities and challenges

Data can be customized based on your business requirements

Create and save your analysis

- · Customize sales and inventory calculations
- · Supports nine levels of product categorization

Multiple levels of analysis

- · Executive level corporate reporting
- · Analyst level data

Analyze performance across your customer base

 Get a total picture of your business by viewing your data across your entire customer base.

Quality products and services from a company you know - QRS

- No capital investment
- Quick and easy implementation
- · On-site training and continued support
- Data managed by QRS: your employees can focus on the business

Improve your business by having the information you need available at your desktop. Call QRS at 1-800-UPC-WORD today, for information on QRS Catalyst.

Proposal

to

NTT Data

for

Identification of Internet Commerce Products and Services

from

INPUT

1881 Landings Drive Mountain View, CA 94043 650 528-6311 wh@input.com

Summary

This analysis will help NTT Data in its selection of products and electronic commerce investment alternatives. The analysis will provide NTT Data an understanding of the current scope of the electronic commerce products and services market.

Objectives

Identify and provide information on at least 50 products and services currently offered for Internet commerce

Scope

The analysis will concentrate on US products and services for use in Internet commerce. Products from companies outside the US will be included where these are found.

The study will attempt to identify the phase(s) of the commerce cycle at which the products are targeted. For the purpose of this study the commerce cycle phases that will identified as:

- · Marketing and Product Evaluation
- · Sales and Purchasing
- · Logistics (including planning and delivery) and Receiving
- Billing and Collection/Payment
- Customer Support and Operation
- Horizontal Products (e.g. Security)

Wherever possible the analysis of the products will also identify if the product is designed for use by the buyer or by the seller in an Internet commerce transaction.

For each of the products the following information will be supplied:

- · Brief product description (maximum of half a page)
- Vendor name and contact information
- · Web-site URL, if available

Methodology

The analysis will be based on Internet-based research plus research of existing INPUT files and research studies

Vendors will be contacted by phone or email and asked to supply copies of product literature.

Deliverables

The final analysis will include:

- · List of products and services identified for each phase
- · Brief description of each product plus vendor details
- Background material found for each product plus any product marketing material received from the vendors

The work will be performed on a best efforts basis and a weekly update of progress will be provided to NTT Data.

Provided authorization to proceed is given by Wednesday February 18th 1998 then INPUT will complete the work by 24th March 1998.

Fees

INPUT's professional fee for this project is \$30,000 (excluding applicable taxes).

One half of this fee (\$15,000) is payable on contract authorization and the remainder on delivery of the final analysis.

This proposal will remain valid until Wednesday February 18th 1998, unless extended in writing.

Contract Authorization

To authorize the project as specified, please sign and return one copy of this proposal with payment of 50% (\$15,000) of the project fee.

The remaining 50% of the fee is due and payable on submission of the final set of product lists and information.
