Revision									
NOTE: This version contains changes to outsourcing driven by the IBM project. The original numbers for 1989 through 1993 had values for platform and applications operations only. The 1993 Compendium had values for all four sub-modes and the amounts were unattributable. This change allows the future addition of values for desktop and network spending in a structured way. No change to the outsourcing or education industry totals has occurred, and no change to the text of the report is necessary, since only the global outsourcing amount was addressed. In addition, no change is necessary for the reconciliation, since it is made at the mode level only.
