80002 9/92

Outsourcing Definitions

Outsourcing - Contracting for all or a major portion of an information system function or process to a vendor on a long-term basis.

Systems Operations - Contracting out, to a vendor, the information systems operations in either of two ways:

Platform Systems Operations - The vendor is responsible for managing the computer systems and their associated networks.

Applications Systems Operations - The vendor is responsible for developing and/or maintaining a client's applications software as well as operating and managing the computer systems and their associated networks.

Network Management - Contracting to a vendor for the operations and management of the computer-related telecommunications network, transmitting data, voice, image, text, local-area and wide-area networks. Voice-only network operations are not part of information systems outsourcing.

Desktop Services - Contracting out to a vendor for the deployment, maintenance, support, and connectivity of the firm's PC/workstation inventory. The service may also include performing the help desk function.

Applications Management - The vendor is responsible for the development and maintenance of all the applications systems a client uses to support a business operation.

Applications Development - Contracting out for the design, development, and long-term maintenance and enhancement of new applications software associated with a business operation.

Applications Maintenance - Contracting out only for the maintenance of the existing applications software associated with a business operation.

1992 Outsourcing Information Systems Conference

EVALUATION FORM

We ask your help in evaluating the conference. Please complete this brief questionnaire and return it to Barbara Fisher, Conference Coordinator, at the end of the Conference session or leave it on the table outside of the meeting room.
