

**Presentation to EDS
U.S. Manufacturing Markets**

Robert Goodwin
Vice President
INPUT

INPUT

Discrete Manufacturing

Process Manufacturing

Primary Competitors

EDS Marketing Plan INPUT Comments

Systems Operations Markets and Opportunities

Applications in Discrete Manufacturing

- (1) Business operations and planning
 - General accounting
 - Financial reporting
 - Planning
 - MRP II
 - Scheduling
 - Marketing/sales
 - Purchasing
- (2) Engineering and design
 - CAD/CAM
 - Documentation
 - Plant simulation
 - Design engineering
- (3) Factory floor
 - Machine control
 - Area control
 - Plant monitoring
- (4) Other applications
 - Plant maintenance
 - EDI
 - Material warehousing and handling

Discrete Manufacturing Industry

- Requires extensive planning and detail work
- Profit margins greatest for makers and sellers of end products, not components
- Make, not buy, mentality
- Value-added moving from assembly to component manufacture

Discrete Manufacturing Operations

- Viewed as a cost center
- Inventory seen as asset
- Downward, not upward, communication
- Many purchases within local authorization limits

Discrete Manufacturing Products

- Shorter life cycles
- More models
- Major design changes between product releases
- Differentiate for success

Discrete Manufacturing Managers

- Line
 - Doers, not thinkers
 - Promoted from the skilled trades
 - Older
 - Fear of automation
 - Limited mathematical backgrounds
- Senior
 - Myopic
 - Trying to regain power from finance, sales, marketing
 - 90-day focus
 - Protect salaries, bonuses, promotions

IS Issues and Implications

| Area | Issue | Implications for IS Vendors |
|---------|---|---|
| Markets | <ul style="list-style-type: none">• Declining share of world-wide markets• Major deficit in U.S. merchandise trade balance• Heavy competition from lower-cost foreign firms | <ul style="list-style-type: none">• Increased interest in improving production efficiencies |
| | <ul style="list-style-type: none">• Need for companywide automation strategies | <ul style="list-style-type: none">• More-rapid obsolescence of older automated systems• More frequent company wide systems contracts with vendors• Systems integration approach |
| | <ul style="list-style-type: none">• Need for increased inter-departmental planning and coordination | <ul style="list-style-type: none">• Need for more education and training services• Professional services opportunities |

IS Issues and Implications (Cont.)

| Area | Issue | Implications for IS Vendors |
|------------|--|--|
| Production | <ul style="list-style-type: none">• Interest in computer-integrated manufacturing<ul style="list-style-type: none">- Focus on factory floor- Limited understanding of CIM concept• Instant Communication | <ul style="list-style-type: none">• Integrate controllers, then islands of automation• Provide educations and training services• Physical linkage of shop floor and engineering systems via telecommunications• Factory floor LANs + Office LANs• Standardization of network protocols (e.g., MAP)• Need for electronic information interchanges between suppliers, manufacturers, and dealers. |

Market Trends in Discrete Manufacturing

- Large market, still growing at 17%
- High-end MRPII saturation
- Micro-based solutions and workstations
- Need for integrated systems

Operational Trends in Discrete Manufacturing

- Decentralized operations
- Rapid growth in CAD/CAM, but on less expensive platforms
- Delayed CIM

Key Events: Reorganizations

- Digital—alliances
- EDS—lost leverage from GM?
- IBM focus on CIM through ASD

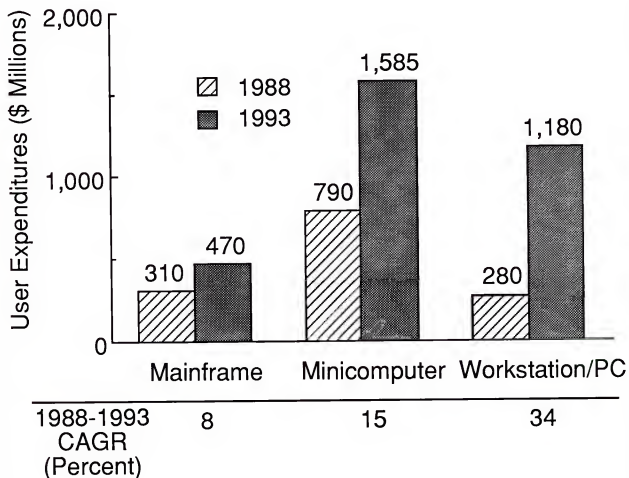

Driving Forces

- Increased competition
- Decentralization
- Workstations and design software

User Expenditures for Application Software by Platform Size 1988-1993

INPUT

User Expenditures for Application Software by Size of User Organization 1988-1993

| | | | |
|--------------------------|-------|--------|---------|
| No. of Firms (1987) | 2,600 | 72,600 | 184,150 |
| 1988-1993 CAGR (Percent) | 23 | 18 | 16 |

INPUT

Leading I.S. Vendors in the Discrete Manufacturing Sector

| Vendor | U.S. Sales (\$ Millions) Estimated CY 1988 Revenues | | | | |
|----------------------------------|--|---------------|----------------|----------------|----------------|
| | Proc. NW | Applic. SW | Turn- key | Prof. Svcs. | Total |
| IBM | 15 | 340 | - | 45 | 400 |
| Prime | - | 85 | 200 | 30 | 315 |
| Intergraph | - | 10 | 240 | 10 | 260 |
| Mentor Graphics | - | 10 | 145 | - | 155 |
| Andersen Consulting | - | 70 | - | 70 | 140 |
| McDonnell Douglas Info. Services | 15 | - | 70 | 15 | 100 |
| Boeing Computer Services | 95 | - | - | 5 | 100 |
| ASK/NCA | 10 | 10 | 70 | 5 | 95 |
| CADAM (Lockheed) | - | 90 | - | - | 90 |
| Control Data | 10 | 15 | 60 | 5 | 90 |
| Schlumberger/Applicon | 15 | 5 | 65 | - | 85 |
| GE Consulting Services | - | - | - | 80 | 80 |
| Xerox Computer Services | 10 | 45 | 10 | 5 | 70 |
| Gerber Scientific | - | 10 | 60 | - | 70 |
| DEC | - | - | - | 65 | 65 |
| GEISCO | 50 | - | - | - | 50 |
| Computer Task Group | - | - | - | 50 | 50 |
| GM/EDS | 25 | - | 25 | - | 50 |
| Daisy | - | - | 50 | - | 50 |
| Honeywell | - | 5 | 35 | 5 | 45 |
| CAP Gemini America | - | - | - | 40 | 40 |
| Hewlett-Packard | - | 30 | - | 10 | 40 |
| System Software Associates | - | 40 | - | - | 40 |
| Subtotal | 245 (22%) | 765 (55%) | 1,030 (52%) | 440 (14%) | 2,480 (30%) |
| Other Vendors | 880 | 615 | 970 | 2,680 | 5,725 |
| Total Market | 1,125 | 1,380 | 2,000 | 3,120 | 8,205 |

Driving Forces for IS Budgets

- Competitive pressures
 - U.S.
 - Japan
- New hardware platforms
- From batch to on-line processing

Major IS Issues in Discrete Manufacturing

- Lack of corporate/IS strategy
- Decentralization
 - "Bootleg" buying
 - Control
 - Accountability
 - "Standards"
- Non-IS managers' IS involvement

Impact of Technology on Discrete Manufacturing

- Moving faster than users' ability to implement
- Necessary evil in manufacturing companies
- No single-vendor solution
- Integration (read: Assistance) required

New Applications in 1989

- Distributed processing using microcomputers
- Software linking MRP II and design automation applications
- Micro-based JiT software

Conclusions

- Users: Limited "big picture" planning
- CIM: Much talk, little action
- Wrong focus
 - Users: One-time gains in support activities
 - Vendors: integration within, not between, islands of automation

Recommendations to Vendors General

- Key: Education, education, education
 - Simplify terminology
 - Build employee skills
- Sales
 - Targets: Department/plant → CIO/CEO
 - Sell the strategy first

Recommendations to Vendors Marketing

- Goal: niche leader
- Add professional services
- Add customized solutions
- Selective alliances
- International markets

Recommendations to Users

- Education, education, education
- Focus on information
- Change the company's vision
- Become proactive, not reactive

Current SI Definition

- A business offering
- Complete solution to complex requirement for:
 - Information systems
 - Networking
 - Automation
- Custom selection and implementation of products and services

The Customization Spectrum

SI Vendor Capabilities Needed

| Ranking | Capability |
|---------|----------------------------|
| 1 | Program management |
| 2 | System design/architecture |
| 3 | Business consulting |
| 4 | Software development |

Ranked by vendors

SI Vendor Capabilities Needed

| Ranking | Capability |
|---------|---|
| 5 | Vertical industry knowledge |
| 6 | Facilities management and operations skills |
| 7 | Software products |
| 8 | Hardware products |

Ranked by vendors

Market Forecasts

Systems Integration Market Forecast

INPUT

Expenditures by Industry 1989-1994

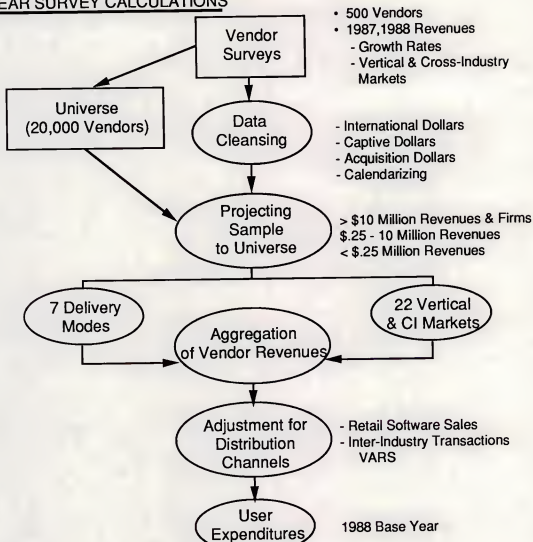

INPUT

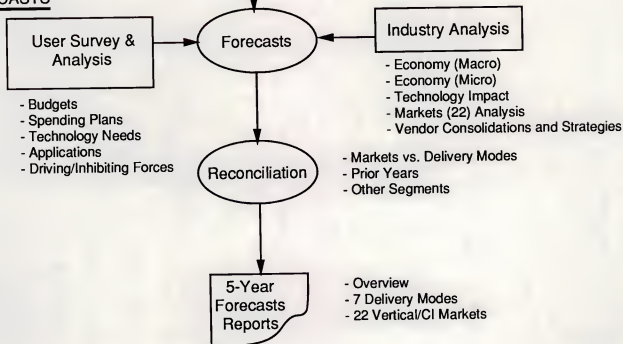

INPUT RESEARCH METHODOLOGY

I. BASE YEAR SURVEY CALCULATIONS

II. FORECASTS

U.S. Companies Using Manufacturing Software by Industry, 1986

| Industry Segment | Total Systems* | Companies | Penetration Rate (Percent) |
|---------------------------------|----------------|-----------|----------------------------|
| Automotive and Parts | 2,109 | 3,771 | 55.9 |
| Electronics and Instruments | 12,631 | 24,498 | 51.6 |
| Aerospace and Defense | 760 ** | 1,903 | 39.9 |
| Fabricated Metals | 5,001 | 29,465 | 17.0 |
| Machinery and Tools | 5,852 | 55,512 | 10.5 |
| Consumer Durables | 2,589 | 32,119 | 8.1 |
| Transportation and Construction | 2,864 | 53,383 | 5.4 |
| Process Industry | 3,445 | 147,834 | 2.3 |
| Total | 35,251 | 348,485 | 10.1 |

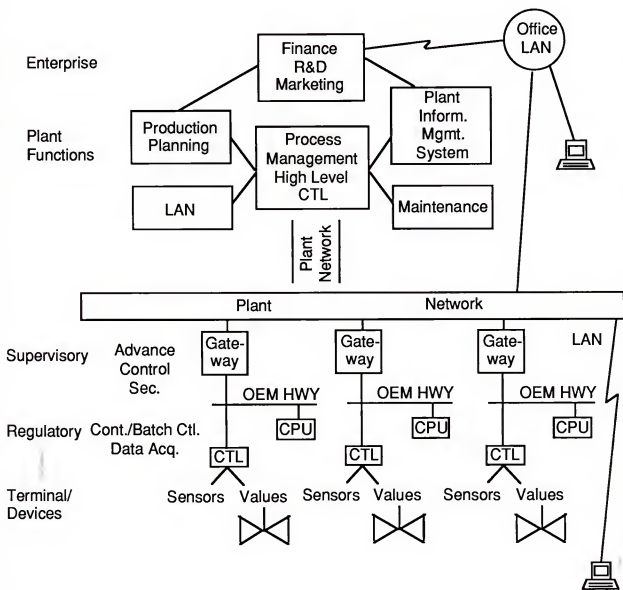

Source: U.S. Census Bureau

* Total systems include replaced packages within the installed base figure, therefore penetration rate may be 30% lower than shown.

** Includes first-tier contractors, not lower-tier suppliers.

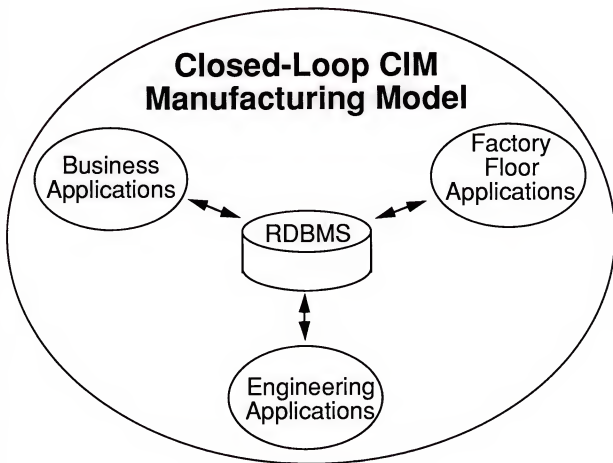

Enterprise-Wide Automation Model

Closed-Loop CIM Manufacturing Model

Process Manufacturing Driving Forces

- International competition
- Customer service support demands
- Government controls (price, safety)
- Economy
- Commodity pricing
- Shortening product life cycles
- Coordinated planning of corporate business and shop-floor management

Trends in Process Manufacturing IS Technology Use

- EDI (closer vendor, customer ties)
- Enterprise-wide/worldwide communications linkages
- Distributed processing
- Global data management
- Product customization/application development tools
- Embedded expert system, functionality
- CIM solutions

Definition

Systems Operations (Facilities Management)

- Processing services
 - Vendor-owned equipment
- Professional services
 - Client-owned equipment

INPUT

Source: INPUT

Processing Services Forecast by Submode

Emerging Opportunities Systems Operations

- Fastest-growing segment of processing market—18% CAGR fueled by:
 - Changing attitudes of IS executives
 - Systems integration "drag"
 - Shortages of in-house staff
- Emerging component of hardware vendors' strategies

Professional Services Markets Forecast

Systems Operations Forecast by Delivery Mode 1989-1994

Systems Operations (Processing Services) by Industry Sector 1989-1994

Systems Operations

Driving Forces

- Tight labor markets
- Difficulty in paying competitive salaries
- Cost of upgrading systems
- Backup requirements
- Systems integration creates opportunities

Trends in Systems Operations

- Network management contracts
- Development as well as operations included in agreements
- Shared resources approach
- Mixed hardware offerings
- Vertical market focus
- Long-term contracts for processing services

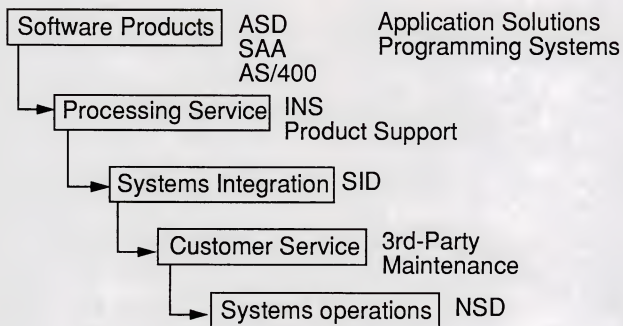

Systems Operations

Selected Leading Systems Operations Vendors and Market Shares, 1988

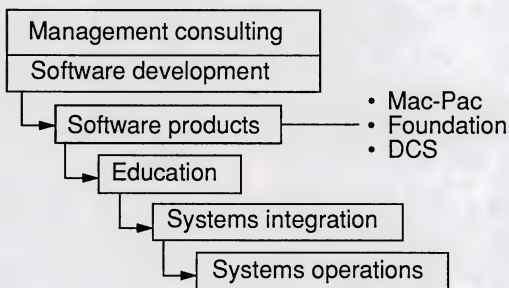

| Vendor | Market Share (%) |
|--------------------------|---------------------|
| EDS | 16 * |
| Computer Sciences | 5 |
| McDonnell Douglas | 4 |
| Shared Medical Systems | 3 |
| Boeing Computer Services | 3 |
| Systematics | 3 |

* Non-GM

IBM as an Example

Andersen Consulting Another Example

SI will be a "springboard into
facilities management"

Vendor Strategies

- “Shared resources” usage
 - “MIPS” lead commitment
- Global VANs offer flexibility
 - Can move processing easily
 - CSC, GE, McDonnell Douglas (BTI)
 - TBF limitations
- Emulation of systems integration project using SO systems
- SO account control leads to systems integration opportunities

Systems Operations Initial Evaluation Criteria Buyers' View

| Ranking | Criteria |
|---------|--|
| 1 | Better or more-flexible service |
| 2 | Availability of operations skills internally |
| 3 | Lower operating expenses |
| 4 | Faster application changes |
| 5 | Data security/privacy |
| 6 | Faster new application development |
| 7 | Ability to add/delete personnel |
| 8 | Reduced capital investment requirements |
| 9 | Mission-critical application |
| 10 | Near-term cash flow improvements |
| 11 | Labor relations/unions |
| 12 | Executive time commitment |

Systems Operation Vendor Selection Buyers' View

| Ranking | Criteria |
|----------------|---|
| 1 | Vendor SO experience |
| 2 | Overall cost |
| 3 | Data security and protection |
| 4 | SO performed by prime SI contractor |
| 5 | Vendor-provided hardware and systems software maintenance |
| 6 | Application software maintenance |
| 7 | Reduced capital investment |
| 8 | Near-term cash flow improvements |
| 9 | SO performed in client facility |
| 10 | Labor relations/unions |
| 11 | SO performed in vendor location |

Conclusions

- Renewed acceptance of systems operations
- Market entry by large vendors
- Track record is important
- Systems integration will provide systems operations growth impetus
- Economic factors will continue to create user demand for systems operations
- Commercial sector is most attractive
- Profits through productivity and technology leverage

IBM National Services Division

- Will provide systems operations for customers
- 30,000 people
- Works with IBM's SID and INS operations

IBM National Services Division

- Provides all "operations support" functions
 - Data center design and building
 - Remote, "Lights-out" data center operations
 - Hardware/software/network maintenance
 - Disaster recovery
 - End-user software support
 - Systems operations studies
 - Conversion services

IBM

- Fundamental changes
 1. Sales incentives for services
 2. Willingness to provide systems operations services

Boeing Computer Services

- Systems Integration Emphasis
 - Federal government
 - State & local government
 - Universities
 - Utilities
- Processing Services
 - Supercomputer services
 - Declining non-federal "utility" services

Aerospace Companies

- Litton Computer Services
- Provides "computer utility" processing services
 - \$30M revenues
 - "Packaged" pricing
 - Emphasis in Los Angeles

European Companies

- Hoskyns:
 - Very successful in FM
 - Good "computer utility" model
 - Avoided industry specialization
- Thorn-EMI
 - Also successful in processing utility
- SD-Scicon, GSI, Sema-Cap, others
- PTTs becoming more aggressive

Key Business Trends

- Globalization
- Specialization/Integration
- Pace of change

Evolution of CIO Role

- Role will not disappear
- Same objectives/problems
- More focus on strategy/planning
- Less focus on systems development/operations
- Stronger focus on telecom/network

Implications for Computer Utility

- Some opportunities, particularly in less information intensive companies
- Decentralizing provides opportunities in business units
- "Compute Utilities" may have to operate within the framework of the corporate network

Pricing

- Key pricing issues for the SO buyer are:
 - Predictability
 - Control
 - Price performance
 - "Futures"

Pricing

- "Computer Utility" is usually resource priced
 - "Storage" and "Connect Time" are the areas of most danger
 - Processing unit algorithms are more protected
- Successful services provide package prices
 - "Virtual machine"
 - Real, dedicated systems

Support

- SO/FM contracts require complete, bundled support
- "Computer Utility"/resource services can "menu price" support

"Computer Utility" Market

- Small market for super-computer computation services
- Small, transient market for compute capability only
- All markets require other value-added parameters
 - Operational, "computer-utility"
 - Applications, FM/SO
